Payments from the producer-settlement fund provide for payments to those handlers whose milk use-value is below the value of milk at the uniform price. As proposed, this section is similar to those contained in current orders. As with payments to the producer-settlement fund, the payments from the fund are specific to each consolidated order. Generally, payments from the producer-settlement fund would be required one day after the required date for payments into the fund. This goal is consistent with the average time lapse between payment into the producer-settlement fund and payments from the fund in existing orders. As in the prior section, payments would be made on the next business day when the required payment date falls on a Saturday, Sunday, or national holiday.

Payments to producers and to cooperative associations. The AMAA provides that handlers must pay to all producers and producer associations the uniform price. The existing orders generally allow proper deductions authorized by the producer in writing. Proper deductions are those that are unrelated to the minimum value of milk in the transaction between the producer and handler. Producer associations are allowed by the statue to "reblend" their payments to their producer members. The Capper Volstead Act and the AMAA make it clear that cooperative associations have a unique role in this regard.

The payment provisions to producers and cooperatives vary greatly among the current Federal orders, particularly in regard to partial payment frequency, timing, and amount. The proposed provisions are consistent with the needs of the consolidated orders. Each order currently requires handlers to make at least one partial payment to producers in advance of the announcement of the applicable uniform prices. The partial payment varies across orders by the required payment date, rate of payment, and volume of milk for which payment is made. This provision continues to require partial payments, although they will vary by consolidated order. Full payment is required to be made so that it is received by producers no later than two days after the required pay-out date of monies from the producer-settlement fund.

Cooperatives will be paid by handlers for bulk milk and skim milk on the terms described for individual producers except that required receipt of payment will be one day earlier. Providing for an earlier payment date for cooperative associations is warranted because it will permit the cooperative association the time needed to distribute payments to individual producer-members. The cooperative payment language in each of the consolidated orders has been expanded to include bulk milk and skim sold by cooperative pool plants as well as by cooperatives acting as a handler.

All of the payment dates are receipt dates. Since payment cannot be received on a non-business day, payment dates that fall on a Saturday, Sunday, or national holiday will be delayed until the next business day. While this has the effect of delaying payment to cooperatives and producers, the delay is offset by the shift from "date of payment" to "date of payment receipt."

Minimum payments to producers. In a proceeding involving the current Carolina, Southeast, Louisville-Lexington-Evansville, and the former Tennessee Valley Federal milk orders (Orders 5, 7, 46, and 11), a proposal was made to clarify what constitutes a minimum payment to producers. The proposal was recommended by Hunter Farms (Hunter) and Milkco Inc. (Milkco), two handlers regulated under the current Carolina order. Under the proposal, a handler (except a cooperative acting in its capacity as a handler pursuant to paragraph 9(b) or 9(c)) may not reduce its obligations to producers or cooperatives by permitting producers or cooperatives to provide services which are the responsibility of the handler. According to the Hunter/Milkco proposal, such services include: (1) Preparation of producer payroll; (2) conduct of screening tests of tanker loads of milk; and (3) any services for processing or marketing of raw milk or marketing of packaged milk by the handler.

At the May 1996 hearing, representatives of Hunter and Milkco testified that both handlers receive milk from cooperative associations and Piedmont Milk Sales, a marketing agent handling the milk of non-member producers. The Hunter representative explained, due to competitive marketing conditions in the Southeast in late 1994 and early 1995, handlers were able to purchase milk supplies at Federal order minimum prices without any over-order premiums being charged. As a result of the absence of over-order premiums, the representative stated, Hunter received underpayment notices from the market administrator on milk that it had received from Piedmont Milk Sales.

Hunter contends the problem of what constitutes a minimum payment to producers should be clarified in the event that premiums again disappear in the future. If this issue is not resolved, according to Hunter, it will suffer a loss of milk sales and its producers will receive lower prices. Hunter argues that the current policy is discriminatory and unfair and that everyone would benefit from a clarification of the rules defining Federal order minimum prices.

Milkco supported Hunter's position and stated that it also received underpayment notices from the market administrator for the December 1994 through October 1995 period on milk received from independent dairy farmers, but did not receive underpayment notices on milk received under the same or similar conditions from cooperative associations.

Carolina-Virginia Milk Producers Association offered qualified support for the Hunter/Milkco proposal. The cooperative suggested expanding handlers' responsibilities to cover tanker washing and tagging, supplying milk to handlers on an irregular delivery schedule, field work, disposing of surplus milk during months when the supply is above local needs, and importing supplemental milk for Class I use during periods of short production.

Mid-America Dairymen, Inc. (Mid-Am) testified and filed a post-hearing brief strongly objecting to the Hunter/Milkco proposal. Mid-Am argued that the issue of minimum payments to producers is national in scope and suggested that the issue be addressed on a national basis within the context of the Federal order reform as required by the 1996 Farm Bill. Furthermore, Mid-Am stated that clearly the costs for butterfat testing are borne by all producers, and the costs of testing milk in tankers for antibiotics are borne by all handlers, regardless of their source of supply. According to Mid-Am, no confusion exists as to who is responsible for these tests and, therefore, they should not be included in the proposed amendments.

Several handlers either supported the Milkco/Hunter proposal or stated the proposal should be considered by the Secretary for all Federal milk marketing orders within the context of Federal milk order reform.

Based on the testimony presented at the public hearing and comments received, the Department's recommendation issued on July 17, 1997 (62 FR 39470), was to consider this issue as part of Federal order reform. The decision stated that no changes were being recommended for the 4 southeastern orders involved in the proceeding because this issue is central to all Federal milk orders and should not be interpreted differently from one order to another. The decision also noted the conceptual differences among market participants concerning what constitutes minimum prices to producers. The record was not extensive in detailing the particular services to be assigned to each party, nor in providing guidance concerning the cost of these services which appeared to vary considerably from organization to organization.

Hunter and Milkco, Inc., filed an exception to the Department's partial recommended decision and urged adoption of their proposal. These handlers stated that their proposal would specify the responsibility of all handlers with respect to producer milk and thereby rectify any inconsistency that may currently exist in order language concerning this issue.

Hunter and Milkco also stated that any disagreement within the industry concerning which services are the responsibility of the handler is secondary to the issue under review and does not warrant the denial of their proposal. The commenters contend that the central principle surrounding this issue is uniformity in the treatment of handlers purchasing milk supplies from cooperatives or independent producers. The precise list of services is of secondary importance, they state, and industry disagreement concerning these services should not prevent the Department from embracing the central thrust of their proposal.

Regardless of the short-term outcome in the pending rulemaking, there is a long-term issue that transcends individual orders and should be uniformly applied in the interpretation and administration of all Federal milk orders if possible. Accordingly, interested parties are invited to submit comments concerning this issue.

Payments by a handler operating a partially regulated distributing plant. All current and consolidated orders provide a method for determining the payment obligations due to producers by handlers that operate plants which are not fully regulated under any Federal order. These unregulated handlers are not required under the scope of Federal milk order regulation to account to dairy farmers for their milk at classified prices or in returning a minimum uniform price to producers who have supplied the handler with milk. However, such handlers may sell fluid milk on routes in a regulated area in competition with handlers who are fully regulated.

Therefore, the regulatory plan of Federal milk orders needs to provide a minimum degree of regulation to all handlers who enjoy routes sales of fluid milk in a regulated marketing area. This is necessary so that classified pricing and pooling provisions of an order can be maintained. It is also necessary so that orderly marketing conditions can be assured with respect to handlers being charged the classified value under an order for the milk they purchase from dairy farmers. Without this provision, milk prices in an order would not be uniform among handlers competing for sales in the marketing area, a milk pricing requirement of the AMAA. There are 3 regulatory options that are available at the option of the partially regulated handler.

It is recognized under current orders that the purchase of Class I milk by a partially regulated handler of milk that is priced under a Federal order in an amount equal to, or in excess of, quantities sold by partially regulated handlers in the marketing area ensures that price equality is maintained between these entities. In these circumstances, a partially regulated handler will not be required to make payments to the producer-settlement fund so that the use-value of milk has been equalized between fully regulated and partially regulated handlers.

For those instances in which a partially regulated handler purchases no milk from fully regulated handlers, or where purchases are less than the quantity of route disposition in the marketing area by the partially regulated handler, a payment may be made by the partially regulated handler into the producer-settlement fund of the regulated market at a rate equal to the difference between the Class I price and the uniform price of the regulated market.

Many current orders also allow the operator of a partially regulated plant to demonstrate that the payment for its total supply of milk received from dairy farmers was in an amount equal to the amount which the partially regulated plant would have been required to pay if the plant were fully regulated. This amount may be paid entirely to the dairy farmers that supplied the handlers, or in part to those dairy farmers with the balance paid into the producer-settlement fund of the regulated market. This should be adopted in all orders.

All of the current orders also provide, under certain circumstances, for payment options by partially regulated handlers relating to reconstituted milk. All of the payment options available to a partially regulated handler are retained under the consolidated orders. This provision is now found in § 1000.76 of the General Provisions.

Adjustment of accounts. All current orders provide for the market administrator to adjust, based on verification of a handler's reports, books, records, or accounts, any amount due to or from the market administrator, or to a producer or a cooperative association. This provision continues to be included in the consolidated orders. The provision requires the market administrator to provide prompt notification to a handler of any amount so due and requires payment adjustment to be made on or before the next date for making payments as set forth in the provisions under which the error(s) occurred.

VOL 63 ISS 20 JA 30 1998 UMI

Charges on overdue accounts. All current orders provide for an additional charge to handlers who fail to make required payments to the producer-settlement fund when due. Such payments include payments to the producer-settlement fund, payments to producers and cooperative associations, payments by a partially regulated distributing plant, assessments for order administration, and marketing service and certain other payment obligations in orders with specialized provisions such as transportation credits. This should continue to be provided for in the consolidated orders.

In order to discourage late payments, it is proposed that a 1.0 percent charge per month be incorporated in the consolidated orders. This rate represents the mid-point in the range of charges by all orders presently. Overdue charges shall begin the day following the date an obligation was due. Any remaining amount due will be increased at the rate of 1.0 percent on the corresponding day of each month until the obligation is paid in full.

As proposed, all overdue charges would accrue to the administrative assessment fund. The late-payment charge is to be a penalty that is meant to induce compliance with the payment terms of the order. If late-payment charges for monies due on producer milk were to accrue to the balance owed to either producers, cooperatives or producers/cooperatives via the producer-settlement fund, it could result in such producers and cooperatives being less concerned whether they are paid on time, thus being counterproductive to the purpose of late payment provisions. Under the provision recommended, cooperatives and producers would not be placed in a position where they would prefer to be paid several days late so that they would receive the late-payment charges or increase the level of producer prices due to late payment fee accrual to the producer-settlement fund. This is of particular concern in markets with a single dominant cooperative. Additionally, by having late-payment fees accrue to the administrative fund, monies are made available to enforce late-payment provisions that would otherwise have to be generated through handlers' administrative assessments.

Assessment for Order Administration

The AMAA provides that the cost of order administration shall be financed by an assessment on handlers. All current orders provide for proportionate per hundredweight assessments of varying rates. As proposed, a maximum rate of 5 cents per hundredweight is provided. The assessment would apply to all of a handler's receipts pooled under the order.

Deduction for Marketing Services

As in most current orders, the consolidated orders should provide for the furnishing of marketing services to producers for whom cooperative associations do not perform services. Such services should include providing market information and establishing or verifying weights, samples and tests of milk received from such producers. In accordance with the Act, a marketing services provision must benefit all nonmember producers under the order. They are not uniform in the consolidated orders.

The market administrator may contract with a qualified agent including a cooperative association to provide such services. The cost of such services should be borne by the producers for whom the services are provided. Accordingly, it is proposed that each handler be required to deduct a maximum of 7 cents per hundredweight from amounts due each producer for whom a cooperative association is not providing such services. All amounts deducted should be paid to the market administrator not later than the due date for payments to the producer-settlement fund.

6a. Northeast Region

The Northeast Marketing Area

The recommended consolidated Northeast order differs significantly from other consolidated orders. In addition to merging three existing Federal milk orders, the proposed Northeast order also recommends expansion in the western and northern regions of New York state, and all currently unregulated areas of the New England states (except Maine).

While the current New England (Order 1) and Middle Atlantic (Order 4) order have similar pricing provisions for adjusting producer blend prices in a manner identical to how plant prices are charged, the current New York-New Jersey (Order 2) order employs a "farm-point" pricing method. This decision recommends that the pricing of milk should employ a plant-point pricing methodology in the consolidated Northeast order. This method is used in every other current marketing area and in every recommended consolidated marketing area. This represents a considerable change in how milk will be priced for those handlers and producers who currently are priced under the provisions of the New York-New Jersey order.

In addition to the different pricing provisions of the three existing orders, other important differences and related provisions need to be addressed in recommending a complete Northeast regional order that will accomplish the goals of the AMAA. These include what is commonly referred to in the New-York-New Jersey order as the "pass through" provision, the need for providing marketwide service payments in the form of cooperative service payments and balancing payments that currently exist in the New York-New Jersey order and do not exist in either the current New England or Middle Atlantic orders. Additionally, the three current northeast orders also provide for seasonal adjustments to the Class III and IIIA price, which may no longer be necessary in light of the replacement being recommended for the BFP.

It is fair to observe that the current order most affected by the recommended consolidation is the New York-New Jersey order. In addition to the differences already described, certain terms and provisions of the recommended Northeast order are also different in how they are described and presented but are nevertheless consistent with existing provisions that accomplish the goals of the AMAA. This is less of an issue for those entities that are accustomed to the terminology of provisions used in the New England and Middle Atlantic orders. The following presents a discussion of the recommended order provisions and issues that are unique to the consolidated Northeast order.

Plant

The plant definition for the proposed consolidated Northeast order should differ from that of the other consolidated orders by allowing stationary storage tanks to be used as reload points. This exception to the plant definition is warranted for the consolidated Northeast order due to certain unique conditions that affect the ability of producers to assemble milk in an efficient manner and subsequently transport it to a plant that actually processes milk into finished dairy products, including fluid milk products. This exception would not consider the reload point or facility as a point from which to price producer milk. Rather, milk once assembled would be shipped to a processing plant where it would be priced.

A portion of the Northeast milk supply is derived from some 200 small dairy farms located in Maine. Because much of this state is serviced by secondary and rural winding roads, the current New England order has provided for reload points as a workable solution to the inherent hauling difficulties in transporting relatively small loads of milk from the countryside to reload points and facilities with stationary storage tanks that do not serve as a pricing point. This should continue to be provided for in the consolidated Northeast order. Not to provide this accommodation would adversely affect a substantial number of small producers and the milk haulers that service them.

Pool Plant

The *pool distributing* and *pool supply plant* definitions of the proposed consolidated Northeast order should use the standard order language format used in other orders, combined with performance standards that are adapted to marketing conditions in the Northeast.

The proposed pool distributing plant definition specifies that a pool distributing plant must have 25 percent or more of its total physical receipts of bulk fluid milk distributed as route disposition and that route disposition within the marketing area be at least 25 percent. The 25 percent level of total receipts distributed on routes is a reasonably high enough level to establish a distributing plant's association with the marketing area. The in-area route distribution performance requirement of 25 percent is recommended for two reasons. First, as one of the intents of Federal milk order reform was to adopt liberal pooling standards, a 25 percent level provides a level of association with the market that is liberal yet sufficiently high enough to assure pooling standards that are performance oriented. Second, it tends to minimize changing the regulatory status of handlers from their current regulatory status by the Federal order program through the consolidation of existing orders. This also seems a reasonable standard in light of individual state regulatory plans currently in place in Maine, Pennsylvania, and Virginia are applicable.

As already discussed, the recommended consolidated Northeast order and other nearby consolidated marketing orders do not recommend expansion to include currently unregulated areas. This includes areas in the states of Pennsylvania, Virginia, and the entire state of Maine. Some distributing plants in these areas are not currently regulated, or are only partially regulated to the extent they enjoy Class I sales in regulated areas. A 25 percent in-area route distribution level will serve to ensure or minimize any change in their current regulatory status under the Federal program that result from consolidation of the three northeast marketing areas into a single new order.

Unit pooling, wherein two or more plants operated by the same handler located in the marketing area can qualify for pooling as a unit by meeting the total and in-area route distribution requirements of a pool distributing plant, is recommended for inclusion in the consolidated Northeast order. Providing for unit pooling provides a degree of regulatory flexibility for handlers by recognizing specialization of plant operations.

Due primarily to positions offered by many of the major Northeast dairy cooperatives and their recommendations on appropriate pool supply plant performance requirements, the consolidated Northeast order supply plant performance requirements initially should be set to require that in the months of August and December, at least 10 percent of the total quantity of bulk milk that is physically received at a supply plant be shipped to distributing plant. For the months of September through November, such shipments by pool supply plants should be at least 20 percent. To the extent that a supply plant has met these performance requirements, no performance requirement is recommended for the months of January through July. However, a supply plant that has not met these performance requirements will need to meet a 10 percent performance requirement in each of the months of January through July in order to qualify as a pool supply plant.

While this decision has recommended providing for pool reserve supply plants, it is not recommended for inclusion in the provisions for the consolidated Northeast order. However, providing for a system of supply plants is recommended for the consolidated Northeast order and this provision is sufficiently self-explanatory in the proposed order language.

Producer-Handler

The producer-handler definition for the consolidated Northeast order should conform to the limitations on receipts at its plant or acquiring for route disposition no more than 150,000 pounds of fluid milk products from handlers fully regulated under any Federal order. This should cause no change in the regulatory status of any known producer-handler currently in operation in the proposed consolidated Northeast order region.

Producer

The producer definition of the proposed consolidated Northeast order should be defined as described in the proposed order language for the order. This definition describes those dairy farmers who are properly associated with the Northeast marketing area and who should share in the benefits that accrue from the marketwide pooling of milk in this area.

The months specified in the producer definition for defining when a dairy farmer would not be considered a producer under the order are so indicated because they tend to accurately reflect the seasonality of supply for meeting the market demands for milk during the "short" season in the proposed Northeast marketing area. Accordingly, the producer definition should not include dairy farmers who's milk during any month of December through June is received as producer milk at a pool plant or by a cooperative association handler if the operator of the pool plant or the cooperative association caused the milk from such producer's farm to be delivered to any plant as other than producer milk as defined in the producer milk provision of the proposed Northeast order, or any other Federal milk order during the same month, in either of the two preceding months, or during any of the months of July through November.

Similarly a dairy farmer would not be considered a producer under the order, for any month of July through November, any dairy farmer whose milk is received as producer milk at a pool plant or by a cooperative association handler if the pool plant operator or the cooperative association caused the dairy farmer's milk to be delivered to any plant as other than producer milk, as defined in this proposed order, or in any other Federal milk order during the same month.

Producer Milk

The producer milk definition of the consolidated Northeast order should follow the general structure and format of other consolidated orders. It differs from other consolidated orders in that it requires cooperative handlers to organize reports of producer receipts that are outside of the states included in the marketing area, or that are outside of the states of Maine or West Virginia, into state units with each unit separately reporting receipts.

As previously discussed, not all consolidated orders set diversion limits for producer milk. For the proposed Northeast order, no diversion limits are established as they are, for example in

VOL 63 ISS 20 JA 30 1998 UMI

the proposed Florida order. However, diversions are limited in functional terms. The maximum quantity of milk that a pool plant would be able to divert and still maintain pool plant status would be 100 percent minus the applicable shipping standard.

Component Pricing

The consolidated Northeast order should employ a component pricing plan in the classified pricing of milk under the order as previously discussed in the BFP section of this recommended decision. This recommendation is consistent with positions taken and proposals offered by major cooperative groups in the Northeast who supply a large percentage of the milk needs of the market. This also conforms with the recommendations discussed earlier in this decision on replacing the BFP.

Farm-Point vs. Plant Point Pricing

At issue in the suggested merging of the three northeast marketing areas is the use of two distinct pricing methods. The Middle Atlantic and New England marketing area employ a system of plant-point pricing. This pricing method is also employed in every other marketing area in the Federal order system. Only the New York-New Jersey marketing area uses what is called "farm-point" pricing. This decision recommends the adoption of plant point pricing as the pricing method for the consolidated Northeast order.

Plant-point pricing of milk that is pooled under an order prices milk f.o.b. the plant of first receipt. The cost of hauling from the farm to the plant is the responsibility of the producer. When the receiving handler is also the hauler, orders permit the handlers in making payments to each producer to deduct hauling costs up to the full amount authorized in writing by the producer.

As originally employed in the New York-New Jersey order (Order 2), farm-point pricing establishes the price for milk by the zone (distance from market computed the nearer of the basing points) of the township in which a producer's milkhouse is located. While termed "farm-point" farms are grouped by their township location. However, this is the nearest practicable proxy for farm location. In functional terms, when a handler picks up milk at a producer's farm, the handler takes title of the milk at the time and point of pickup. Accordingly, there are no adjustments in payments to producers to cover any part of the cost of pickup or hauling in moving milk to the handler's plant. Farm-point pricing fundamentally shifts the cost of transporting milk from the producer to the handler. Farm-point pricing has been in effect in Order 2 since 1961. While the fundamental concept of farm-point pricing has been retained with respect to its overall structure of mileage zones, other order provisions were adopted subsequent to its establishment and modified over time so that farm-point pricing could remain viable.

In the decision that established farm-point pricing (25 FR 8610, Sept. 7, 1960), prevailing marketing conditions served to warrant this type of pricing system. At that time, the emergence of bulk-tank milk began to take on a degree of prominence in the milk supply of Order 2. Prior to the adoption of farm-point pricing (1959), about 8 percent of the producers had bulk tanks, accounting for at least 14 percent of the volume of milk associated with the market. About 92 percent of producers delivered their milk at their own expense directly to plants in 40 quart cans. Most of the milk can-delivered was from farms within a radius of not more than 15 miles from the plant. The milk of producers who had converted to bulk tanks, in some instances, had been hauled more than 200 miles from farm to city plants, but the majority of bulk tank milk was moved much shorter distances to country receiving plants. The decision cited that in October, 1959, milk was received from 49,719 producers at 691 plants.

When milk was delivered in cans to a handler's plant, the plant was the location of where milk was weighed, sampled for butterfat and quality, and where cans were washed. It was at the plant that milk was accepted or rejected. It was the place where milk was cooled and co-mingled with other individual producer's milk. More importantly, it was the place where control of the milk passed from producer to the plant operator or moved by the plant to other plants for fluid or manufacturing uses. Minimum prices required by the order to be paid by handlers were adjusted for the location of the plant at which milk was received from dairy farmers.

Bulk tank milk brought a set of new factors. When milk is transferred from a producer's bulk tank to the hauler, the point of transfer is also the point where several functions are performed. Milk in a producer's bulk tank has already been cooled, and therefore not subject to the early delivery deadlines. The weight of milk is determined at the bulk tank and is also the place where samples are taken for butterfat and quality. It is also here that the individual producer's milk is accepted or rejected and loses its identity by being co-mingled with other milk.

Numerous problems arose in regulating the handling of bulk tank milk in an order where pooling depended upon direct delivery from the farm to a pool plant and under which minimum class prices and the uniform prices to be paid to producers was reflective of the location of the plant where delivery was made:

1. Administrative problems associated with bulk tank handling arose, particularly where and when milk was regarded to have been received. Bulk tank milk provided the opportunity to deliver milk to different plants, some pool and some nonpool. Where a given tank load of milk was unloaded if it went to two or more plants of the same or different handlers on the same day was difficult to determine.

2. The incentive arose (because of the administrative difficulty of determining when and where milk was received) for handlers to behave in a way that would result in the maximum exclusion of milk from the pool for fluid use outside the marketing area.

3. The incentive arose for the maximum inclusion in the pool of milk in fluid and manufacturing uses.

4. The incentive and opportunity arose for handlers to select one of several plants for receipt of bulk tank milk, with or without manipulation of hauling charges. This distorted and impinged upon the effectiveness of the minimum price provisions of the order, especially in the case of relatively long hauls of bulk tank milk.

The 1961 decision that established farm-point pricing provided 8 scenarios that demonstrated how handlers behaved so as to minimize their pricing obligations to producers. Most of the scenarios arose from the inability to determine when milk was received at a plant. In order to mitigate such circumstances, several things were done. Foremost, was the establishment of farm-point pricing on the basis of bulk tank units and the designation of each bulk tank unit as either a pool or nonpool unit and defining the circumstances under which designations could be changed.

The pricing of milk at the farm eliminated the incentive for handlers to attempt to make it appear that the plant of receipt was other than the plant where milk is actually received and handled. It was made crystal clear that delivery and receipt of bulk milk takes place at the farm. Once acquired by the handler, the plant or plants to which the milk may be delivered depended on the decision of the handler, not the producer. Under these circumstances, where the milk is actually used is not a factor to be reflected in the minimum producer price. The operator of the bulk tank unit was defined as the handler and the point of receipt of milk. This entity was responsible for establishing the unit, and the entity held the responsibility for reporting, accounting, pooling and paying producers. Additionally, the decision concluded that the price at which the farm bulk tank is accounted for to the pool should be the minimum class price adjusted for location of the farm, that payments by handlers directly to producers be adjusted to reflect all location differentials based on where farms are located and where bulk tank milk is received.

A proposal that would have allowed a tank truck service charge authorized by the producer but not in excess of 20 cents per hundredweight (cwt.), and payments to cooperatives which serve as handlers operating a bulk tank unit should be at the price reflecting transportation and (the then existing) direct delivery differential applicable at the handler's plant where milk is delivered by the cooperative was not incorporated into the order. At that time, it was found that plant hauling charges averaged nearly 20 cents per cwt. This was offered as rationale for a negotiable 20 cent per cwt. charge by handlers for hauling. Arguments notwithstanding, the underlying concepts embodied in farm-point pricing caused the Department to not allow for any hauling deduction by handlers.

Shortly after the implementation of farm-point pricing, the need to amend the order to keep farm-point pricing viable arose. The first occurrence was in 1963. In the 1963 decision (28 FR 11956, Oct. 31, 1963), it was noted that there had been significant changes in marketing conditions that arose from establishing farm-point pricing in 1961. These included the reduction in premiums to bulk tank producers in general; the reluctance of proprietary handlers to receive bulk tank milk from individual producers in order to avoid the hauling costs; the differences in pricing can and bulk tank milk; and a slowdown in the trend of conversion from can milk to bulk tank milk. The 1963 decision, in acknowledging changing marketing conditions, incorporated into the Order, an authorized 10-cent per cwt. charge for hauling, provided that producers authorize this maximum level in writing.

In the 1963 decision the Secretary found that allowing for a limited authorized service charge for hauling bulk tank milk at a maximum rate of 10 cents per cwt. was sufficient. This was largely based on the fact that handlers were not then charging for bulk tank pickup and hauling, but rather were paying premiums for bulk tank milk. Additionally, can milk direct delivered by producers to plants was still very much the norm. While bulk tank milk was growing, it had not yet accounted for a majority of milk pooled on the order. The 10-cent negotiable hauling charge was found to provide the needed flexibility for handlers to receive bulk tank milk from individual producers.

This decision raised, for the first time with respect to farm-point pricing, the maintenance of orderly conditions and the uniform pricing to handlers on all milk priced and pooled under the order. Because bulk tank milk is priced by township zone (the best proxy for a farm's location) all farms in any particular township have the same value assigned to their milk. However, the decision found it necessary to reflect appropriate uniform pricing of bulk tank milk because it has differing value dependent on the accessibility and relative location of individual farms within the township. With this finding, it was determined that responsibility for hauling to the township pricing point should be borne by the producer with appropriate safeguards to protect the producer. Therefore, a maximum negotiable hauling charge from handlers of 10 cents per cwt. was brought under the order.

By 1970, marketing conditions in the New York-New Jersey market had changed to the point where handlers were authorized to receive a full 10-cent hauling credit for each cwt. of bulk tank milk which was disposed of for manufacturing uses. Additionally, the negotiable 10-cent hauling charge to producers for a handler's cost offset established by the 1963 decision was retained. However, the 10-cent negotiable limit was limited to manufacturing milk. Can milk at this time represented about 25 percent of the total amount of milk pooled in Order 2, with the balance being bulk tank milk.

Proponents supporting this change to the order claimed, and the decision affirmed, that the manufacturing price for milk in Order 2 was not properly aligned with manufacturing class prices in adjacent Federal orders. In this decision (35 FR 15927, Oct. 9, 1970) the Secretary found that to the extent that Order 2 handlers had borne the transportation costs associated with the pickup and movement of bulk tank milk used in manufacturing from the farm to the plant, Order 2 handler costs exceeded the price which handlers in adjacent order markets were required to pay for milk used in manufacturing. By adopting this transportation credit for handlers, there was no need to adopt other proposals that would have lowered the manufacturing price for milk under the other northeastern orders or lower the Class I price for milk in Order 2 as had been proposed and denied.

By 1977, some 16 years since the adoption of farm-point pricing, marketing conditions had changed again and the issue of providing for more equitable competition both within the Order 2 market and between other orders took on primary importance. By this point in time, can milk was about 3 percent of the market, with the balance represented by bulk tank milk, the near inverse of the marketing conditions prevailing in 1961. The transportation credit that had been established for handlers in the 1970 decision for manufacturing milk was now extended to *all milk* received by handlers. The transportation credit was increased to 15 cents per cwt., plus an additional 15-cent maximum negotiable credit above the "automatic" 15 cents because total average transportation costs was found to be about 30 cents per cwt. For reasons nearly identical to the 1963 and 1970 decisions, "formalizing" the negotiable hauling charge was not adopted because of the need of flexibility in accounting for milk movements from the farm to the township pricing point (42 FR 41582, Aug. 17, 1977). In that decision the Secretary also raised the direct delivery differential from 5 cents to 15 cents per cwt. in the 1–70 mile zone for can milk delivered by farmers to plants within this zone, changed the transportation adjustment rate from 1.2 cents per cwt. for each 10 miles to 1.5 cents per cwt. for each 10-mile zone beyond the 201–210 zone, and 1.8 cents per cwt. for each 10-mile zone within the 201–210 mile zone.

Cooperatives were of the strong opinion that the cost of milk assembly and transportation are the marketing costs of the handler and not by producers. However, they also indicated that changes are warranted in the order because of the failure of neighboring markets to adopt farm-point pricing.

Comparative examples of handler price inequities with respect to their cost of milk was amply demonstrated for both intra and inter market situations. With respect to inappropriate price alignment between orders, the competitive relationships between Order 2 and Order 4 (then known as the Delaware Valley Order) were closely examined. On intra-order movements of milk, it was shown that Class I handlers in New York City had a significantly

VOL

UMI

lower procurement cost for direct-ship over bulk tank milk because bulk tank milk from "distant" supply plants had higher transfer and over-the-road hauling costs. Supply plant milk at the city represented about 80 percent of milk receipts at city plants. The inter-market situation demonstrated that handlers in Philadelphia accounted for milk at prices lower than New York handlers. Order 4 handlers were in a position to establish lower resale prices for fluid milk than their competitors in the New York market because the burden of increased hauling costs fell largely on Order 2 handlers. As in 1970, other proposals were denied in light of adopting the 15-cent hauling credit for handlers. These other proposals included lowering Class I and the manufacturing price for milk in the order by 15 cents per cwt.

By 1981, bulk tank milk accounted for nearly the entire milk supply pooled on Order 2—about 99.6 percent. As the result of a hearing held in June 1980, in the final decision (FR 46 33008, June 25, 1981) the Secretary again amended the transportation credit provisions of the order. The 15 cents per cwt credit for handlers was retained, however, the 15-cent negotiable transportation service charge was modified to allow handlers to negotiate with producers for any farm-to-first plant hauling cost in excess of the 15-cent transportation credit, plus "the amount that the class use value of the milk at the location of the plant of first receipt was in excess of its class use value at the location where milk was received in the bulk tank unit from which the milk was transferred." According to the 1981 decision, this amendment would adjust hauling allowances for handlers to more closely relate the location value of milk to the costs incurred in transporting milk from farms and country plants to distributing plants in the major consuming markets of the market. Additionally, the decision indicated that this change was necessary to reflect current marketing conditions and permit a more equitable competitive situation for regulated handlers, both on an intra market and inter market basis. The decision also applied a 15-cent direct delivery differential for bulk tank milk from New York City out to the 61–70 mile price zone, on the basis that direct delivery differential is applicable to milk received in cans at a plant in the 1–70 mile zone.

In the 1981 decision the Secretary found that the majority of milk moved to distributing plants in 1979 from the 1–70 mile zone moved directly from farms, accounting for about 58 percent of plants in this zone with 48 percent being reloaded. Moreover, the decision found that Order 2 plants located in northern New Jersey received direct shipped milk as did handlers located in Order 4. Thus, inter market price alignment needed to be structured primarily on the basis of handlers obtaining direct shipped milk.

A federation of cooperative associations representing Order 4 producers proposed that Order 2 be amended to return to plant-point pricing, with the direct delivery differential being reduced to 10 cents per cwt, and that the Class I differential at the base zone of Order 2 be increased from the $2.25 level then in effect, to $2.40. This federation of cooperatives believed that this "package" of order modifications would provide for proper price alignment between Order 2 and Order 4. While the decision did apply different transportation rates at a rate of 1.8 cents per cwt. outside the base zone of the Order (201–210) and a rate of 2.2 cents per cwt. inside the base zone, it did not provide for a return to plant-point pricing.

While the decision did not adopt plant point pricing, the decision does acknowledge that the amendments adopted tended to establish plant pricing with respect to the classified prices to handlers. However, farm-point pricing was retained with respect to uniform prices to producers. With this being the case, the basic substantive difference between the amendments and plant pricing is the impact on the movement of milk to higher-priced zones for manufacturing use. Under plant pricing, the minimum uniform price payable to producers applies at the location of the plant of first receipt and handlers receive a credit from the producer settlement fund at such uniform price. The decision also concluded that plant-point pricing for producers would provide a greater incentive to haul direct-shipped milk to city plants for manufacturing uses, since there would be a credit from the pool for the full amount that the uniform price transportation differential at the city plant exceeds the transportation differential for the zone of the bulk tank unit. Adopting plant-point pricing for producers would have had the effect of encouraging milk to move long distances to city plants for manufacturing uses when transportation savings could be realized if such milk stayed nearer to manufacturing plants generally located in the milkshed.

Farm-point pricing has undergone many evolutionary changes from its inception in 1961. The original rationale for farm-point pricing, free hauling and the administrative difficulty of determining when milk from bulk tank units was received seems far removed from present-day marketing conditions and the rationale for continuing it. There were a number of years that hearings were necessary to first recognize that the burden of transportation costs rested with handlers. This resulted in handlers being able to successfully argue that with this burden, it becomes much more difficult for the order to establish and maintain uniform prices to handlers as required by § 608(5)(c) of the AMAA. This is evidenced by the nature of the decisions of 1963, 1970, 1977, and 1981. Much "repair" to other order provisions was also needed to retain farm-point pricing. Accordingly, farm-point pricing has outlived its intended purpose and the Secretary proposes that it should not be retained in a consolidated Northeast order.

The Need for a Producer-Price Mechanism

As discussed above, farm-point pricing for producers did provide some rational pricing incentives to promote efficiency within the Order 2 marketing area. This can reasonably be summed up by concluding that farm-point pricing would not provide, as plant-point pricing would, incentives to haul direct-shipped milk to city plants for manufacturing uses, since there would not be a credit from the pool for the full amount that a uniform price transportation differential at the city plant exceeds the transportation differential for the zone of the bulk tank unit. Adopting plant pricing would have had the effect of encouraging milk to move long distances to city plants for manufacturing uses when transportation savings could be realized if such milk stayed nearer to manufacturing plants generally located in the milkshed.

In an effort to address the dairy industry structures that have evolved over the past four decades in the three current northeast marketing areas, efforts were undertaken by a major group of dairy farmer cooperatives in the northeast to address what the pricing implications are to producers and handlers as the region moves to a unified plant-point pricing method. This has resulted in a proposal by the Association of Dairy Cooperatives in the Northeast (ADCNE) that include St. Albans Cooperative Creamery, Inc., Land O'Lakes, Upstate Farms Cooperative, Inc., Agri-Mark, Inc., Milk Marketing Inc., Dairylea Cooperative Inc., and Maryland & Virginia Milk Producers Cooperative Association Inc. These dairy farmer cooperatives account for well over half of the milk that would be pooled and priced under the proposed consolidated Northeast order. Their proposal calls for establishing a producer differential structure that would "overlay" the Class I differential structure that would apply in the consolidated Northeast order.

The structure proposed is a county-based plant-point price structure, providing for 14 zones that accommodate the need to reflect existing and longstanding competitive price relationships among plants, while integrating the farm and plant point pricing systems currently used in Order 1, 2, and 4 and with currently state-regulated areas that fall outside of the proposed marketing area. Further, the ADCNE proposed prices at the major cities in the Northeast, including Boston, New York City, Philadelphia, Baltimore, and Washington, D.C. to have specific Class I differential levels that are somewhat different from those recommended in the Option 1A Class I price surface. For example, this decision recommends a New York City Class I differential of $3.15, while ADCNE proposes $3.20. In general, the ADCNE proposal assumes that the Class I differential structure that will be adopted is Option 1A, is the Class I pricing option they strongly support, and is also the Class I pricing option overwhelmingly supported in public comments received from interested parties from the northeast.

With respect to a producer differential surface, the ADCNE proposed that a debit of 5 cents per cwt. be made to the blend price applicable at non-distributing plants in certain zones. The need for the debit, according to the ADCNE proposal, is to make deliveries to distributing plants somewhat more attractive to producers, while decreasing the amount by which manufacturing plants draw on the marketwide pool for transportation values, offering also that such a debit is economically justified and authorized by the AMAA. According to ADCNE, it is distributing plants that provide the revenue, in the form of Class I values which form the blend price paid to producers. Deliveries to manufacturing plants do not contribute to increasing the value to the marketwide pool. The debit, according to ADCNE, is a reflection in part of the Order 2 system, which has priced some 50 percent of the milk in the northeast region, and which does not provide location-based transportation payments for movements from farms to manufacturing plants. The ADCNE proposal provides that deliveries to Class I plants are rewarded under this system with an additional 5-cent payment from the pool for the marketwide benefit conferred a distributing plant's utilization.

For the Western New York State order area of the order, ADCNE also proposed a broad area in which a producer differential of $2.40 per cwt. to producers would be payable on deliveries of producer milk at all plant locations in this area. This portion of the price surface proposed by ADCNE purports to be reflective of the major historical movements of milk from east to west in the region which returned the eastern farm point price to dairy farmers under Order 2's farm-point price system, and that the Western New York State order has not had any location differentials, thereby establishing a "flat" price surface in the area. If those plants, for producer pricing purposes, were zoned lower in value reflecting the westerly and northerly distance from New York City or Philadelphia, ADCNE is of the view that the ability of both distributing and supply plants of plants to attract an adequate supply of milk could be in jeopardy. Furthermore, the expectation that Class I utilization of the proposed Mideast order will be nearly 10 percent higher than the Class I utilization in the Northeast order was also offered in support of ADCNE-proposed producer differential level in this area.

The ADCNE proposal also recommends producer differential levels in areas that they believed should be included in either the consolidated Northeast order or the Mideast order through expansion that this proposed rule does include for consideration. Additionally, the ADCNE proposal also addresses producer differential levels at other locations outside of the Northeast region.

Additional supporting and amplifying comments were also provided by Dairylea. These comments supported the major themes offered in the ADCNE proposal for a producer differential overlay to Class I differential levels. Dairylea states that moving directly to a plant-point pricing method would accentuate "existing inequities and market dysfunctions." Dairylea further commented that a plant-point differential schedule would maintain current inter-plant price differences in the current New England and Middle Atlantic orders, but would worsen them for New York manufacturing plants, many of which are cooperatively owned. Their view of the ADCNE pricing proposal is that it maintains economic incentives for milk to move to Class I distributing plants, would provide for more balanced procurement equity among competing manufacturing plants, maintain equitable producer pricing when milk is marketed by transporting it from a higher priced zone to a lower priced zone, and provides a structure that allows for adequate blend price levels in all areas of the Northeast milkshed.

Dairylea further comments that in addressing adopting plant-point pricing, existing "near-in" manufacturing plants (plants located in a relatively high differential location) would enjoy a procurement advantage relative to their competitors that are located in a lower priced location. Dairylea recommends narrowing the price difference between manufacturing plants that compete for producer milk and/or finished dairy product sales. To do this, Dairylea supports lowering producer differentials for manufacturing plants that are located in high-valued locations and increasing those differentials at manufacturing plants in areas that have lower location values. Dairylea advocates the ADCNE proposal for a producer differential that is 5-cents lower than those of Class I plants when such plants are located in the same pricing zones. Dairylea's view of this design results in maintaining, or slightly increasing, producer differentials applicable at Class I plants and reducing those applicable at "near-in" manufacturing plants. At the same time this would provide for increasing producer differentials at manufacturing plants in central, western, and northern New York. According to Dairylea, this producer pricing surface would present a more equitable marketing environment than strict plant-point pricing currently employed in Orders 1 and 4, while at the same time not threatening the viability of manufacturing plants in those areas of a consolidated Northeast marketing area.

A major theme of Dairylea is its view that Federal milk orders and their provisions should foster an environment under which manufacturing plants are provided equal cost and procurement ability, and not to disfavor such manufacturing plants located in high milk production areas where Class I differentials are lower. This view, as expressed, seems a departure from the intent of Class I differentials serving to attract an adequate supply of milk at locations to satisfy fluid demands. Dairylea also states that the final rule of 1991 that realigned intra-order prices in Order 2 resulted in harm to producers in northern and western New York. While it is not appropriate to specifically revisit this issue and decision here, official notice is taken of the final decision (55 FR 50934, December 11, 1990) that realigned Class

VOL 63 ISS 20 JA 30 1998 UMI

I differentials in the three existing northeast marketing areas.

Comments supporting the ADCNE proposal for a producer pricing surface were also offered by Upstate Farms Cooperative, Inc. The Upstate Farms views served to reiterate the major themes developed in the ADCNE proposal.

Agri-Mark, a part of ADCNE, filed separate and dissenting views on the ADCNE proposal. Conceptually, Agri-Mark notes that plant and farm-point pricing are different, but notes further that the differences are not always unfavorable. Agri-Mark submits that under plant-point pricing, all producers shipping to the same plant receive the same minimum order blend price regardless of where their farm is located. Under farm-point pricing, farmers shipping to the same plant receive different prices under the order depending on where their farm is located. Farms closer to New York City, Agri-Mark notes, receive a higher price than farms farther from the city, even though their milk ends up in the same place.

As to the efficiency arguments touted to be derived from farm-point pricing, Agri-Mark notes that most manufacturing plants, especially cheese plants, were built in the northeast prior to the adoption of farm-point pricing and not in response to it. Rather, says Agri-Mark, these plants were built at their present locations because of their proximity to abundant milk supplies. The procurement problems for manufacturing plants that Order 2 entities alert us to, did not arise in New England manufacturing plants under plant-point pricing even though these plants were located as far north as possible within the milkshed for New England.

Simply put, Agri-Mark believes that rather than decreasing the differential between manufacturing plants and city distributing plants, an increase is justified. They are also of the opinion that manufacturing plants located far from higher-priced zones will maintain an advantage even with the adoption of strict plant-point pricing because this milk does not need to travel long distances to reach manufacturing plants. The ADCNE proposal would cause Agri-Mark producers to receive lower prices that competitive price relationships do not warrant.

The Agri-Mark view of Federal milk marketing orders differs substantially from the views expressed by Dairylea. Agri-Mark states that the role of Federal milk marketing orders is to treat all producers equitably relative to how their milk is used and not to weaken price integrity by promoting or causing producers to compete for Class I sales. This is best accomplished, according to Agri-Mark, with appropriate pooling requirements and Class I differentials to satisfy the Class I demands of the market. Agri-Mark fears that if the regulatory pricing plan gives a distributing plant an advantage over a cooperative manufacturing/balancing plant in the same zone, that plant can use this advantage for itself instead of passing it along to farmers to offset transporting their milk to market. A 5-cent debit to the Class I differential schedule is, in the view of Agri-Mark, significant. If so set, Agri-Mark submits, pressure will come from distributing plants to see this 5-cent price difference grow.

Lastly, in their opposition to the ADCNE proposal, Agri-Mark notes that no manufacturing plant has been built in any city zone for decades, noting that the only significant plants in such areas for the northeast are older plants producing nonfat dry milk and butter and serve to balance the Class I needs of city markets, concluding that such plants are there for common sense and efficiency reasons. In support of this observation, Agri-Mark notes that existing Class I differentials have not been adjusted to more fully account for increases in hauling costs.

A recommendation on whether or not to adopt a producer pricing differential structure that differs from a Class I differential cannot be made in this proposed rule. The issue before the Department is to examine the impact of the change from farm-point to plant-point pricing on producers as part of recommending the adoption of plant-point pricing for the new consolidated order. The change to plant-point pricing will affect approximately one-half of the producers in the consolidated marketing area and is a significant departure from historical methods of distributing the revenue that accrues from classified pricing to producers. Plants will not experience significant change since plants currently regulated under Order 2 already account to the marketwide pool at the Class I location differential value. The issue then, tends to focus on how to pool and distribute the revenue as equitable as possible to producers.

There are significant differences between Option 1A and Option 1B that may result in price relationships never before experienced by either producers or handlers in the northeast. This, in and of itself, may cause both proponents for and against a producer price differential to reconsider their position in the need for and development of a producer price surface founded on the pricing structure of Option 1A. Nevertheless, under either Option 1A or Option 1B, further analysis is needed in determining the need for adjusting producer blend prices by a method that differs from that currently applied to all orders, including the development of appropriate order language.

Competitive equity between manufacturing plants is already ensured by the classified prices applicable to handlers who operate such plants. In fact, this proposed rule suggests a uniform Class III and Class IV price be applicable for all locations. The more appropriate issue this proposal seems to address is that manufacturing plants are often cooperatively owned. All entities, including cooperatives in their capacity as handlers, account to the marketwide pool at the manufacturing price for milk received at their plants. The price paid to producers is the blend price for all milk pooled on the market and that was priced according to its use. Cooperatively owned manufacturing plants located in higher priced areas will pay a higher blend price to producers who deliver milk to that location provided they meet the performance requirements for being pooled thereby demonstrating the appropriate degree of association with the market. In this regard, it is worthy to note that not all manufacturing plants in the high-valued zones in the New York marketing area are pool plants. Blend prices are adjusted everywhere according to the location value of the plant. Adjusting producer blend prices on the basis of whether or not milk was delivered to a distributing plant or to a manufacturing plant seems to create a form of producer price discrimination that classified pricing and the mechanism of marketwide pooling and its related provisions attempt to mitigate. Such pooling provisions provide a degree of equity to producers in the form of a uniform blend price adjusted only for the location value on all milk pooled on the market. Classified pricing and marketwide pooling have served well to mitigate the price competition between producers seeking preferred higher-valued outlets for their milk, while at the same time ensuring handlers uniform prices, adjusted only for location, in the prices they pay for milk. This proposal, as currently developed, seems to take a step backward in that it may be inadvertently creating a degree of price competition between producers that classified pricing and marketwide pooling sought to minimize.

As Dairylea commented, the 1991 rule that realigned prices in the three current northeast orders may not have gone far enough is establishing a Class I differential structure and indeed may have resulted in harm to producers located in northern and western New York. Prior to the 1991 final rule, the price difference between the New York base zone and New York City was 59 cents. The 1991 final rule increased this to 72 cents, but in doing so, the differential at the base zone was lowered by 13 cents. This resulted in a lowering of blend prices to producers in the far reaches of the milkshed. This observation may provide the basis for further examination of the Class I differential structure presented under Option 1A. Specifically, a 5-cent increase in the New York Class I differential and a similar increase in the Class I differential at Philadelphia, together with appropriate location adjustments between these pricing points, may accomplish what a producer price differential schedule does not seem to accomplish at its current state of development.

A submission from New York State Dairy Foods, Inc., (NYSDF) a trade association representing dairy product manufacturers and retailers voiced the need for raising the New York City Class I differential. NYSDF proposed an 8-cent per cwt. increase to reflect the reality of higher hauling rates. If this proposal is accepted, this would raise the Class I differential in New York City from the current $3.14 to $3.22. According to NYSDF, the 8-cent increase may not be sufficient depending on the length of time needed to implement milk order reforms. NYSDF also commented on their support for retaining farm-point pricing, but offered no compelling arguments for doing so.

Marketwide Service Payments

Cooperative Service Payments. The Secretary proposes that cooperative service payments as part of a marketwide service payment provision for the consolidated Northeast order should not be included in a consolidated Northeast order. As proposed by ADCNE a 2-cent per cwt. payment would be made out of the marketwide pool to cooperatives and non-cooperative entities for funding "information and policy services" that would be of marketwide benefit. Cooperative service payments of this sort currently are provided for under terms of the New York-New Jersey order, but are not provided for in either the New England or Middle Atlantic orders. However, under the New York-New Jersey order, cooperative service payments are made only to qualified cooperatives that meet the conditions specified under the order and does not provide for such payments to non-cooperative entities.

Rationale offered in support for a cooperative service type payment to cooperatives and non-cooperative entities were based on recognizing that in a regulatory pool structure, private parties provide important services that are of benefit to everyone involved in the marketwide pool, including the promulgation, amendments to, and administration of the order. Not to provide a mechanism for the recovery of a portion of the expense involved in providing such services would disadvantage those incurring these expenses while everyone in the market benefits as a result of these services.

Qualification criteria presented for entities eligible to receive this payment included a demonstration to the market administrator that it provides information with respect to market order prices and marketing conditions, that it has retained legal and economic staff or consulting personnel available to participate in marketing order amendatory proceedings, to consult with the market administrator with respect to marketing order issues, and that the entity pool at least 2.5 percent of the order's total milk volume.

As presently presented there is not a compelling reason to adopt this sort of compensatory plan to reimburse those entities that incur these costs. Market administrators and their staffs make themselves available to meet with, discuss, and aid in formulating positions that are reflective of the need of the marketing area as a normal part of their duties. Additionally, there are numerous provisions in the order that require as a matter of course, the issuance of reports, prices, and other information that affect all marketing order participants and to provide service to the entities affected by the regulatory plan of the order. Finally, no other current or recommended consolidated order recommends providing for such cost compensation. Cooperative and proprietary handlers in the New England and Middle Atlantic marketing areas included in the consolidated Northeast order, as well as entities in all other marketing areas have not experienced or have demonstrated any of the harm or "disadvantage" that arises, or may arise, if such costs are not shared by the entire pool of producers in the marketing area. This proposed rule can only assume that industry participants that have an interest in developing the promulgation and amendments to marketing orders would be willing to do so at their own expense. The positions and arguments offered are largely issues of the self-interest of entities. As such, self-interest may or may not be of marketwide benefit.

Balancing Payments. The Secretary proposes that a marketwide service payment plan offered for inclusion in the consolidated Northeast order includes a 4-cent per cwt. marketwide service payment to qualified handlers that perform market balancing from the marketwide pool should not be included in the consolidated Northeast order.

The proposal for balancing payments from the marketwide pool is intended to reflect that there are costs that handlers incur in balancing the Class I needs of the market and in providing for clearing the market of temporary surpluses. According to the proponents, these balancing costs are not fully recoverable from Class I handlers, however the benefit that results from this service being provided is a benefit of all producers in the market.

Handlers that incur the costs would be those handlers that would receive partial cost reimbursement. Cooperatives would be eligible to form common marketing agencies or federations for purposes of qualifying for balancing payments. Such handlers would include those who: (1) demonstrate ownership or operation of a balancing plant with the capacity to process a million pounds of milk per day into storable products such as cheese, butter, and nonfat dry milk and that such handler also represent at least 2.5 percent of the total volume of milk pooled under the order; (2) have under contract and the obligation to pool on a year-round basis at least 8 percent of the market's milk volume; (3) own a balancing plant that must be made available to other handlers or cooperatives at the request of the market administrator; (4) qualify to provide pool producers with a temporary market for their milk for up to 30 days at the request of the market administrator; and (5) demonstrate to the market administrator that their utilization of milk in Class I uses is greater than the minimum shipments required for pool plant qualification under the order.

There are several reasons for not recommending balancing payments for the consolidated Northeast order. First, the proposed Northeast order consolidates two current orders, New England and the Middle Atlantic, that do not currently provide for balancing cost offsets to handlers for such purposes and that these markets have not experienced any undue harm or disadvantage by not providing for this sort of cost offset. Secondly, and in addition to expressed opposition to

VOL 63 ISS 20 JA 30 1998 UMI

compensate handlers for balancing the market, an appropriate class price has been provided for market clearing purposes—the Class III—A price. It is a price that is applicable in all current Northeast orders, and is continued in this proposed rule as the Class IV price. While these two class prices are not the same (as explained in the BFP section of this decision), they are conceptually similar in that handlers have been provided with a market clearing price and further compensation beyond this is not warranted. Lastly, the proposed 4-cent per cwt. level is unexplained with respect to how adequately it tends to offset balancing costs.

The "Pass-Through" Provision

Currently, the New York order provides for what is commonly referred to as the "pass-through" provision. The intent of this provision is to provide for a degree of competitive equity for handlers that pay the order's Class I price for milk so that they can compete with handlers in unregulated areas that do not. This provision has been in place in the New York order since 1957 and is a part of how the order allocates and classifies milk. In functional terms, the pass-through provision removes the amount of milk distributed outside of the marketing area from the full Class I allocation provisions of the order, thereby providing a degree of price relief to handlers who compete with other handlers who are not held to the pricing provisions of the order in unregulated areas. Regulated New York handlers currently compete with unregulated handlers in the unregulated areas of Pennsylvania and other areas in the Northeast region.

The current provisions of the New England and Middle Atlantic orders do not have this provision although they too adjoin similar non-federally regulated areas. Handlers regulated by these two orders also compete with these same handlers for Class I sales. The merging and expansion of these three Northeast orders continue to result in areas that adjoin the recommended Northeast order that would not be regulated.

While there were proposals both for and against retaining a pass-through provision in the consolidated order, the need for it was expresses on the basis of the extent the Northeast consolidated order would be expanded to include currently unregulated areas. Generally, handlers support continuing to provide for a pass-through provision. and this position can only be considered reinforced given the limited degree of expansion of the consolidated Northeast order. If the entire Northeast region would fall under Federal milk order regulation, the need for the pass-through would be moot.

The Secretary proposes that a pass through provision, even in light of the limited expansion suggested for the consolidated Northeast order, should not be included. Class I prices charged to handlers that compete within the marketing area for fluid sales are determined by the location value of their plants. The Class I differential structure recommended by either Option 1A or Option 1B both recognize the location value of milk for Class I uses and are both designed to establish Class I differential values to cause milk to be delivered to bottling plant to satisfy fluid demands. Accordingly, any handler located in high-valued pricing areas will be charged for the location value of Class I milk at their plant location regardless of whether or not they compete with other handlers for fluid sales in areas where the location value of Class I milk at these plant locations are lower. This location value pricing principle should be extended to address handlers competing for sales with handlers who do not pay the same price for Class I milk in unregulated areas.

Seasonal Adjustments to the Class III and Class IV Prices

The three northeast orders to be consolidated into a single Northeast order currently provide for a seasonal adjustor on Class III and Class IIIA milk prices. These provisions have been a part of these three orders for more than 30 years. Prior to the adoption of the Minnesota-Wisconsin (M–W) price series in the mid-1970's, these markets established the equivalent of the modern Class III price on the basis of what was known as the U.S. Average Manufacturing Grade Milk-Price Series (U.S. average price).

The U.S. average price series was a competitive pay price series, but differed from the M–W in that it recorded price averages consistently below the M–W that was rapidly being adopted elsewhere in the country as the appropriate price for surplus uses of milk and used as a price mover for higher-valued class prices. Given the national marketplace in which surplus diary products compete for sales, a mechanism was needed to align these two differing price series. Accordingly, seasonal adjustments to the Class III price were developed and made a part of these orders. These seasonal adjustors were found not only to be warranted for better price coordination between these two price series, but also served to encourage handlers to dispose of the maximum amount of milk in Class I uses.

By the mid-1970's, the M–W was adopted to replace the US. average price series and the seasonal adjustors were retained. The reason for retaining these adjustments were indicated to encourage handlers to make more milk readily available for fluid use in the short production months and to facilitate the orderly disposition of excess reserve milk supplies in flush production months. Although some regional price disparity was acknowledged to result from retaining these adjustments, they were nevertheless retained because there was no evidence that providing for such adjustment had led to any interregional problems in the marketing of the reserve milk supply.

Agri-Mark, a major cooperative in the northeast, has proposed that seasonal adjustments continue in the consolidated Northeast order. The main thrust of their proposal is that markets with relatively high Class I use create a burden on the manufacturing sector in their areas. They view seasonal adjustments as also assisting in sending the proper economic signal to manufacturers. This is important, according to Agri-Mark because the seasonal adjustment provides an economic "disincentive" for Class III and Class IV manufacturers to use milk in the fall when less producer milk is available and additional supplies are needed for Class I uses.

The Secretary proposes that as presently formulated, seasonal adjustors to the Class III and Class IV prices should not be incorporated into the provisions of the consolidated Northeast order. This proposed rule proposes a much more permanent replacement for the current BFP. If the suggested BFP is adopted in all new consolidated orders, there is no compelling reason offered at this time to contemplate continuing seasonal adjustments to Class III and Class IV prices in light of how these prices would be derived. They are also not proposed for orders that are expected to have Class I utilizations similar to those anticipated in the consolidated Northeast order and who similarly have important manufacturing activity in such markets.

6b. Southeast Regional Issues

The 3 proposed orders for the Southeastern United States—Florida, Southeast, and Appalachian—are faced with a different set of marketing conditions than other orders. The Southeastern United States is one of the fastest growing areas of the country but the most deficit area in terms of milk

production per capita. From 1988 to 1995, the population of the 12 Southeastern states rose from 57.9 million to 63.5 million. By the year 2000, the population is expected to reach 66.8 million people.

While population increases in the Southeast, milk production in the 12 Southeast states (i.e., Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia) has been decreasing—from 15.4 billion pounds in 1988 to 13.7 billion pounds in 1996. The net result of these opposite trends is a widening gap between the local supply of milk for fluid use and the demand for such milk.

Unlike other parts of the country, the Southeast has few facilities for handling surplus milk. Consequently, surplus production during the months of January through June must, in some cases, be shipped hundreds of miles for processing at manufacturing plants generally to the north. For this reason, the provisions in these orders must be aimed at the twin goals of encouraging supplemental milk to move to these markets during the short production months—generally July through December—but they must also discourage supplemental milk to move to these markets when it is not needed in the flush production months—generally January through June—because such milk would simply displace local milk and increase cooperative organizations' costs to dispose of the milk.

Transportation Credits

As a result of the need to import milk to the Southeast from many areas outside the Southeast during certain months of the year, transportation credit provisions were incorporated in the Carolina, Southeast, Tennessee Valley, and Louisville-Lexington-Evansville orders in August 1996. These provisions provide credits to handlers that import supplemental milk for fluid use to the market during the short production months of July through December. The provisions restrict credits to producers and plants outside of the marketing areas. The credits are also restricted to producers who supply the markets during the short season and are not applicable to producers who are on the market throughout the year.

Following the initial implementation of transportation credits in August 1996, the provisions were modified in a final decision issued on May 12, 1997. The amendments became effective on August 1, 1997, in 3 of the 4 orders.[33]

The Secretary proposes that transportation credit provisions should be retained in the new Southeast and Appalachian orders but should not be included in the Florida order. Written comments received in response to the advance notice of proposed rulemaking indicate that producers in the Southeast favor retention of these provisions for these two orders. The Secretary proposes that the provisions should not be included in the Florida order, however, because that market is largely supplied by 2 cooperative associations which are able to recoup their costs of supplying the market with supplemental milk.

With the consolidation of orders, the Secretary proposes that some conforming changes should be made to the transportation credit provisions of the Southeast and Appalachian orders. Section 82(c)(1) of the present orders limits transportation credits on transferred bulk milk to plants that are regulated under orders other than the southeast orders that currently have the provisions, and section 82(c)(2)(ii) limits the area where farms may be located to be eligible for transportation credits on milk shipped directly from producers' farms. In §§ 1005.82(c)(1), 1007.82(c)(1), 1005.82(c)(2)(ii), and 1007.82(c)(2)(ii), the references to "1011 and 1046" should be removed.

The addition of northwest Arkansas and southern Missouri to the Southeast marketing area will make those 2 areas ineligible for transportation credits. This change in the application of the credits would naturally follow from the logic for incorporating these 2 areas in the Southeast marketing area. Specifically, northwest Arkansas and southern Missouri are regular sources of supply for handlers in the Southeast marketing area and, in addition, include plants that compete for sales with handlers regulated under the Southeast order. Accordingly, the producers in these 2 areas should, and will, regularly share in the pool proceeds of the Southeast market. Of course, since transportation credits are designed to attract supplemental milk to the market for fluid use from producers who are not regularly associated with the market, transportation credits should not, and will not, apply to a farm or a plant in northwest Arkansas or that portion of southern Missouri that is to be included in the Southeast marketing area.

[33] The Tennessee Valley order, as amended, was not approved by producers. The order was terminated effective October 1, 1997.

Pooling Standards

A number of comments were submitted regarding the issue of pooling standards in the southeast region. The Southeast Dairy Farmers Association (SDFA) recommended that pooling standards be maintained at levels that are as strict or stricter than current regulations and that southeastern milk marketing orders contain pooling requirements that reflect the deficit nature of these markets. SDFA argued that such provisions would discourage the movement of milk into and out of a Federal marketing area that does not normally serve the area unless the milk was actually needed. The association stated that performance requirements for plants are an important element in ensuring that southeastern fluid markets are adequately supplied on a year-round basis and in ensuring that only those plants that have as their principle purpose the supplying of the markets' fluid milk requirements receive the benefits of higher uniform prices. Currently, pooling standards vary between markets and regions, and the association believes that these varying standards should be maintained. SDFA supports a 50% route disposition requirement for pool distributing plants and recommends that the in-area route disposition requirement be standardized at 15% and the 1500-pound daily average exemption be changed to 150,000 pounds per month.

The National Farmers Organization (NFO), recommends that pooling standards for all of the orders recognize and accommodate the pooling on a year-round basis of milk supplies which are actually required for that market's Class I needs on a seasonal basis. NFO suggests that each order should be viewed separately in determining the standards and urges the Department to carefully evaluate pooling provisions to assure equity throughout the system. Another commentor, Middlefield Cheese of Ohio (Middlefield), recommends that all orders have the same pooling requirements. Middlefield states that varying pooling standards between orders create great difficulty in procuring milk for small businesses. It argues that uniformity would allow milk to be economically and efficiently marketed to where it is needed as opposed to a "large co-op dictating control over the milk market."

One of the major cooperatives operating within the Southeast, Mid-America Dairymen, Inc. (Mid-Am), recommends that the pooling standard for distributing plants in high utilization markets should be 50% Class I. Mid-Am also recommends that market

VOL

JA
30
1998
UMI

order would reduce returns to Pennsylvania producers unnecessarily without reducing costs to handlers.

For the reasons discussed previously in reference to the Northeast market, PMMB Area 6 should not be added to the proposed Mideast order area. Consolidation of the existing orders does not necessitate expansion of the consolidated orders into areas in which handlers are subject to minimum Class I pricing under State regulation, especially when the states' Class I prices exceed those that would be established under Federal milk order regulation. Handlers located in PMMB areas 2, 3, and 6 are regulated under the State of Pennsylvania if they do not have enough sales in any Federal order area to meet an order's pooling standards. If such plants do meet Federal order pooling standards, the State of Pennsylvania continues to enforce some of its regulations in addition to Federal order regulations. As State-regulated handlers, they must pay a Class I price for milk used in fluid products, often higher than the Federal order price would be. Inclusion of the Pennsylvania-regulated handlers in the consolidated marketing area would have little effect on handlers' costs of Class I milk (or might reduce them), while reducing producer returns. In view of these situations, it appears that stable and orderly marketing conditions can be maintained without extending full Federal regulation to State-regulated handlers.

Comments from a large cooperative association and a fluid handler urged that southern Ohio and part of West Virginia be included in the proposed Appalachian order to assure that a large distributing plant located in Winchester, Kentucky, remains pooled under the consolidated Appalachian order. Both comments argued that order provisions should specify that plants be regulated according to their location rather than their fluid milk distribution area. The pooling provisions proposed herein would assure that plants are regulated where located unless their route disposition within another marketing area is over 50 percent. This provision should assure that the plant in question remains regulated under the proposed Appalachian order. If a plant's route disposition in a marketing area other than where it is located is over 50 percent, other handlers competing for sales with that handler should be assured that their competitor is paying a like amount for its milk.

Upper Midwest

The proposed Upper Midwest marketing area is comprised of the current Upper Midwest (Order 68) and Chicago Regional (Order 30) marketing areas, with the addition of the western portion of the Michigan Upper Peninsula (Order 44) marketing area. There are 205 counties in this proposed area.

Geography

The proposed consolidated Upper Midwest marketing area is described geographically as follows: 16 counties in Illinois (all currently in Order 30), 6 counties in Iowa (all currently in Order 68), 6 counties in Michigan (all currently in Zones I and IA of Order 44), 83 counties in Minnesota (all currently in Order 68), 16 counties in North Dakota (all currently in Order 68), 8 counties in South Dakota (all currently in Order 68), and 70 counties in Wisconsin (43 currently in Order 30, 20 currently in Order 68, and 7 currently unregulated). This market is about 600 miles east to west and about the same distance north to south.

The area described above is contiguous to the proposed Central market to the south, a small corner of the proposed Mideast market to the southeast, and the eastern portion of Michigan's Upper Peninsula, also part of the proposed Mideast market, to the northeast. North of the Upper Midwest market is Lake Superior and the Canadian border, and west of the market is a large sparsely-populated and unregulated area. Most of the eastern border of the marketing area is Lake Michigan.

The proposed Upper Midwest marketing area is generally low-lying, with some local differences in elevation in Wisconsin and the upper peninsula of Michigan. Natural vegetation in the western part of the area is tall-grass prairie, with the eastern two-thirds of the northern portion being broadleaf forest, coniferous forest, and mixed broadleaf and coniferous forest. Annual precipitation averages 30–35 inches per year. Most of the area experiences summer temperatures that average about 75 degrees; the northern and western portions average winter temperatures are in the low 'teens, while the southern and more eastern portions experience average winter temperatures in the 20's. The far western part of the market predominantly grows mixed field crops, with cattle and soybeans more to the southwest. Both Minnesota and Wisconsin are included in the top five milk-producing states, and dairy is the number 1 agricultural enterprise in Wisconsin, generating over half of the State's income derived from agricultural commodities.

Population

According to July 1, 1996, population estimates, the total population of the proposed Upper Midwest marketing area is approximately 18.5 million. Using Metropolitan Statistical Areas (MSAs), there are 3 population centers over 1 million. The Chicago-Gary-Kenosha area, primarily in northeastern Illinois, is the largest, with a 7.8 million population in the marketing area. The Minneapolis-St. Paul area, located mostly in Minnesota, is next with 2.8 million; and the third-largest MSA is Milwaukee-Racine, Wisconsin, with a population of 1.6 million. The Chicago area is located in the southeast corner of the marketing area, on the west side of the southern end of Lake Michigan, with Milwaukee approximately 85 miles north, also along Lake Michigan. Minneapolis is located 400 miles northwest of Chicago, along the Minnesota-Wisconsin border.

Approximately two-thirds of the population of the proposed marketing area is within the three largest MSA's, with over 80 percent of the population contained within the area's 17 MSA's (with the 14 smaller MSA's averaging 195,000 population).

Sixty percent of the population of the market is concentrated in the Illinois and southeast Wisconsin portion of the marketing area. In Wisconsin, nearly 90 percent of the population is located in the southern two-thirds of the state, and in Minnesota 85 percent of the population is in the southern half of the state.

Fluid Per Capita Consumption

Based on the population figure of 18.5 million and an estimated per capita fluid milk consumption rate of 20 pounds of fluid milk per month, total fluid milk consumption in the proposed Upper Midwest marketing area is estimated at 370 million pounds per month. Plants that would be fully regulated distributing plants under the Upper Midwest order had route disposition within the market of 321.5 million pounds in October 1995. The 3 producer handlers operating in the combined marketing areas during this month had a combined route disposition of .1 million pounds, 5 partially regulated handlers distributed 1.7 million pounds in the marketing area, and an additional .1 million pounds was distributed by unregulated handlers. Twenty handlers fully regulated under 10 other Federal orders, from New York-New Jersey to Great Basin, distributed 36.5 million pounds in the combined marketing areas during October 1995.

case of the Appalachian order only, a balancing plant also may be located in the State of Virginia. This provision has been in the Carolina order and should be continued in the Appalachian order. The performance standards for a balancing plant should be 60 percent of producer receipts under each of the orders every month of the year.

There is no necessity to seasonally adjust the supply plant and balancing plant shipping requirements for the three southeast orders because the standards proposed are flexible enough to accommodate the disposal of surplus milk during the flush production season. In addition, the Secretary proposes that each of the three orders should contain a provision to allow the market administrator to increase or decrease shipping requirements and other pooling standards by up to 10 percentage points. This provision also should be included in the producer milk section of all three orders with respect to the percentage of milk that may be diverted and the number of days in which a producer's milk must be received at a pool plant.

In addition to the provisions described above, the Secretary proposes that each of the southeast orders should contain a provision to allow unit pooling of distributing plants operated by the same handler. The proposed rule is based upon the provision that has been in the Southeast order since 1995.

Some distributing plants may meet the pooling standards of more than one order. Consequently, the Secretary proposes that it is necessary to specify the rules for determining where a plant will be regulated. Under the southeast orders, if a plant meets the pooling standards of the order and is located in the order's respective marketing area, the plant should be regulated under that order even if it has greater sales in some other order's marketing area. This provision has evolved as a result of several price alignment problems in the Southeast involving a plant located in one marketing area but regulated under another order. In every such case, a plant's supply of milk was put in jeopardy as a result of a lower blend price under the order in which it became regulated based on its sales. Notwithstanding the merging of several of the smaller markets in the Southeast, the Secretary proposes that this provision should be retained for the southeast orders to preclude a repetition of this problem. There was widespread support in comment letters for retention of this provision.

In the case of a distributing plant that is not located within any order's marketing area, the Secretary proposes that a different standard should apply. Since, in this case, it cannot be presumed with certainty that a plant is most closely associated with the market in which it is located, its association with a market should be determined based upon where it has the most sales.

Producer-Handler

The Secretary proposes that the producer-handler provisions for the three southeast orders should be very similar to the current provisions. To qualify as a producer-handler, a dairy farmer would have to have route disposition in excess of 150,000 pounds per month; otherwise, the producer's plant would be exempt from regulation pursuant to a provision that has been uniformly adopted for all orders.

To qualify as a producer-handler, a dairy farmer may receive no fluid milk products from sources other than his or her farm and may dispose of no fluid milk products using the distribution system of another handler. Finally, the dairy farmer must provide proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled, and the processing, packaging, and distribution operations, are his/her own enterprise and are operated at his/her own risk.

At the present time, there are three or four producer-handlers operating in the southeast markets. None of these operations would lose their status as producer-handlers under the provision recommended for new southeast orders.

Producer/Producer Milk

The Secretary proposes that the producer and producer milk definitions recommended for the three southeast orders should be nearly identical to the provisions now in the individual orders. These provisions define which dairy farmers are eligible to share in the proceeds of the marketwide pool.

A *producer* should be defined as a dairy farmer whose milk is received at a pool plant, diverted to a nonpool plant, or received by a cooperative association acting as a bulk tank handler. It excludes a producer-handler, a dairy farmer whose milk is delivered to an exempt plant, or a dairy farmer whose milk is reported as diverted milk under the provisions of another Federal order.

The proposed diversion limits that are specified in the producer milk section should be slightly different among the three southeast orders. To qualify for diversion to a nonpool plant, a minimum amount of a producer's milk should be received at a pool plant during the month (i.e., this is called a "touch-base" requirement). Under the Appalachian order, six days' production should be received at a pool plant during each of the months of July through December, and two days' production should be received at a pool plant during each of the other months of the year. Under the Southeast order, ten days' production should be required to be delivered to a pool plant during each of the months of July through December to qualify a producer's milk for diversion to a nonpool plant. During the months of January through June, 4 days' production should be required to be delivered to a pool plant.

Under the proposed Florida order, which will have a higher Class I utilization and less need to divert milk, a producer should be required to deliver at least ten days' production to a pool plant during every month of the year in order to be eligible for diversion to a nonpool plant. These proposed standards are comparable to those required under the separate Florida orders.

The total quantity of milk which may be diverted by a pool plant operator or cooperative association during the month also should vary by market as well as by month. Under the Appalachian order, a pool plant operator or cooperative association should be permitted to divert 25 percent of their producer milk during the months of July through November, January and February. During the months of December and March through June, the total diversion limit should increase to 40 percent of producer milk receipts. The Secretary proposes that the Southeast order should provide a total diversion limit of 33 percent during the months of July through December, and 50 percent during the other months. The proposed diversion limits under the Florida order should be 20 percent during the months of July through November, 25 percent during the months of December through February, and 40 percent during all other months.

The proposed "touch base" requirements and gross diversion limits described above should be adjustable by the market administrator to assure orderly marketing and/or efficient handling of milk in the marketing area. This procedure is described in §§ 1005.13(d)(7), 1006.13(d)(6), and 1007.13(d)(7).

Although a "dairy farmer for other markets" provision was requested for the new orders by some producer organizations, it was opposed by others. The Secretary does not propose inclusion of this provision in the three southeast orders at this time. Such a

VOL 63 ISS 20 JA 30 1998 UMI

provision would restrict the free movement of milk as needed between market. The proposed diversion limits and touch-base requirements in the southeast orders should preclude the association of milk with these markets when such milk is not needed at pool plants.

Report of Receipts and Utilization

The Secretary proposes that to accommodate the payment schedule desired for the three southeast orders, the handler's report of receipts and utilization must be in the market administrator's office no later than the 7th day of the month. The producer payroll report will be required by the 20th day of the month. The information to be included in these proposed reports is essentially identical to the current order provisions.

Payments for Milk

The Secretary proposes that the southeast orders should provide uniform payment schedules for payments to and from the producer-settlement fund and to producers and cooperative associations. Payment to the producer-settlement fund should be made by the 12th day of the month and payment from the producer-settlement fund should be made one day later.

In the case of payments to producers and cooperative associations, the Secretary proposes that the merged Florida order should maintain the longstanding three-payment schedule that has been part of the present Florida orders for many years. The partial payments to producers under the new Florida order should be made on the 20th day of the month for milk received during the first 15 days of the month and on the 5th day of the following month for milk received during the remainder of the month. The rate of payment should be at not less than 85 percent of the preceding month's uniform price, adjusted for plant location and for proper deductions authorized in writing by the producer. The final payment for milk received during the previous month should be made on or before the 15th day of the month.

The Secretary proposes that the Appalachian and Southeast orders should have identical payment schedules. The partial payment for milk received during the first 15 days of the month should be made on the 26th day of the month. The rate of payment should be 90 percent of the preceding month's uniform price. The final payment should be required to be received by the producer on or before the 15th day of the following month. The rate of final payment for all 3 orders should be the preceding month's uniform price adjusted for butterfat, plant location, partial payments, marketing services, and proper deductions authorized in writing by the producer.

Each order now requires payment to a cooperative association to be made one day earlier than the payment to an individual producer. The Secretary proposes that this practice should continue under the new orders.

6c. Midwest Region

Upper Midwest Order

Pool Plant

The Secretary proposes that the pool distributing and pool supply plant definitions of the proposed consolidated Upper Midwest order should use the standard order language used in other orders, adapted to marketing conditions in the Upper Midwest.

The proposed *pool distributing plant* definition specifies that for a plant to be a pool distributing plant, it must have 15 percent or more of its total receipts of bulk fluid milk distributed as route disposition. This percentage is considerably lower than the percentage used in the Chicago Regional order, which varies from 30 percent to 45 percent depending on the month. However, the current Upper Midwest order uses a percentage based on the marketwide Class I percentage for the same month of the previous year. During "normal" months this percentage is approximately 15 percent. When some milk is held off the pool for economic reasons (primarily unusual price differences between classes), the percentage may vary considerably, ranging from the "normal" 15 percent to over 50 percent. Use of a constant percentage at approximately the market Class I percentage will reduce the current opportunities available to distributing plants to become partially regulated by manipulating their reported receipts and diversions of milk. In addition, the proposed language should eliminate month-to-month uncertainty caused by basing handlers' regulatory status on the market's fluctuating utilization percentage.

In addition to specifying the route disposition percentage at 15 percent, the proposed percentage would be calculated on the basis of the total receipts of bulk fluid milk products physically received at the distributing plant. Currently both the Chicago Regional and Upper Midwest orders include milk diverted from the distributing plant in the total bulk receipts used to compute the route disposition percentage.

The Identical Provisions Committee recommended that the in-area distribution criteria for pool distributing plants be 15 percent of total route disposition. The Committee explained that use of total route disposition rather than bulk receipts as the denominator would reduce opportunities for handlers to manipulate the manner in which they may report their operations to avoid regulation. Currently in the Chicago Regional and Upper Midwest orders the in-area route disposition standard is computed using the same basis (bulk receipts, including diversions) as is used to determine whether a plant meets the definition of a pool distributing plant.

The Secretary proposes that provision be made for a single handler to form a unit of distributing plants and manufacturing plants, all of which must be located within the marketing area. The unit would have to meet the requirements for a pool distributing plant and at least one of the plants in the unit would be required to meet the pool distributing plant requirements as a separate plant. Plants not meeting the pool distributing plant definition would be required to have disposition of packaged fluid milk products, packaged fluid cream products, or cottage cheese and other soft manufactured products of at least half of their receipts of Grade A bulk fluid milk products, including milk diverted by the plant operator.

Manufacturing plants traditionally have been included in units with distributing plants because the manufacturing plants produced products such as packaged fluid cream, sour cream, and cottage cheese that are marketed in conjunction with bottled fluid milk products. In addition, some of these plants produce a limited quantity of fluid milk products. Handlers have argued that the operator of a free-standing manufacturing plant that manufactures these complementary products should be able to pool its milk supply for both (or for several) plants as if all of the products were made in the bottling plant.

Both the Chicago Regional and Upper Midwest orders contain a provision for a distributing plant unit. Although the current Chicago Regional order does not specify the types of products that may be manufactured at plants in the unit, the Upper Midwest order does. The Secretary proposes that it is reasonable to place restrictions on the types of products that are disposed of from the manufacturing plants in the unit, since these plants would receive the benefits reserved for pool distributing plants and

shipments from supply plants to the plants in the unit would be considered in determining pool supply plant qualifications.

A *pool supply plant* operator should ship as qualifying shipments at least 10 percent of the plant's receipts of milk from producers, including milk diverted by the handler, each month. As in the current Chicago Regional order, it is proposed that such shipments may be made to pool distributing plants, pool distributing plant units, plants of producer-handlers, partially regulated distributing plants, or distributing plants fully regulated by other Federal milk orders. The extent of shipments to partially regulated distributing plants to be used for qualification would be limited to the quantity classified as Class I. Qualifying shipments to distributing plants regulated by other Federal milk orders should be limited to the quantity shipped to pool distributing plants, and may not be agreed-upon Class II, Class III or Class IV utilization. Shipments directly from farms to pool distributing plants and to plants contained in pool distributing plant units should be included as shipments that help to meet the percentage qualification standard.

The proposed 10 percent shipping requirement is approximately 5 percentage points less than the anticipated Class I percentage for the proposed consolidated Upper Midwest order. The 10 percent shipping standard is greater than the current individual supply plant shipping standard and equal to the maximum shipping percentage required of pool units during the qualifying period in the current Chicago Regional order. The standard under the current Upper Midwest order, which uses the Class I use percentage of the same month in the previous year as the supply plant shipping percentage, would exceed the proposed percentage. Also under the current Upper Midwest order, a reserve supply plant must ship 10 percent of its receipts to pool distributing plants during January through June, and the marketwide Class I percentage for the same months of the preceding year for the months of July through December.

Although the proposed shipping percentage is below the estimated Class I percentage for the proposed Upper Midwest order, the 10 percent shipping standard should be appropriate, in view of the fact that many distributing plants have a supply of milk from their own producers. In September 1997, approximately 27 percent of the milk pooled or received at distributing plants in the Chicago Regional order was pooled as producer milk with the distributing plant operators as the handlers, rather than as producer milk pooled by cooperatives and other handlers. The milk pooled by distributing plant handlers accounted for approximately 12 percent of the total milk pooled in September 1997 (or approximately 5 percent of the total milk that would have been pooled if all of the milk eligible to be pooled in September 1997 had been pooled). Approximately 7 percent of the Class I producer milk, or approximately 2 percent of the total producer milk, pooled under the Upper Midwest order is pooled by distributing plant operators. The combination of the supply plant shipping percentage and the percentage of milk pooled directly by distributing plant handlers would appear sufficient to meet anticipated Class I needs in the proposed Upper Midwest order. The proposed 10 percent supply plant shipping percentage also should be appropriate to avoid unnecessary and uneconomic shipments.

The proposed rule would allow the market administrator to increase or decrease the required shipping percentage on a marketwide or selected area basis if deemed necessary to assure an adequate supply of milk to pool distributing plants or to prevent uneconomic shipments of milk. If the shipping percentage is increased by the market administrator, shipments made for the purpose of meeting the increased percentage may be made only to pool distributing plants or plants contained in pool distributing plant units.

Groups of two or more supply plants should be allowed to form *systems of supply plants* for the purpose of meeting the shipping requirements, by shipping the same percentage as that required for individual pool supply plants that are not part of such a system. These pool supply plant systems may consist of plants of the same handler, more than one handler, and may contain both proprietary and cooperative handlers. The only requirement affecting an individual plant within the unit is that the plant must be physically located within the marketing area. This restriction is necessary to prevent distant plants from receiving the benefits of participating in the marketwide pool without having an actual association with the market.

Several plants located outside the boundaries of the proposed marketing area currently are included in supply plant units by a "grandfather clause" in the Upper Midwest order. The proposed order provides that these plants may continue to be included in a supply plant unit if they so desire as long as they maintain continuous pool plant status.

The Secretary proposes that handlers may form supply plant systems by filing a written request by July 15, listing the plants to be in the system. The system would remain in effect from August 1 through July 31 of the following year. These dates deviate from those proposed for other orders because of the difference in seasonal production variations between this and other orders. The handler or handlers establishing the system may also delete a plant from the system or dissolve the system by submitting a written request to the market administrator. Any plant deleted from a system, or plants that were part of a system that was discontinued, may not be part of a system until the following August.

Provisions that allow handlers to add plants to a system under certain circumstances and to allow systems to reorganize in the event a plant changes ownership or in the event of a business failure by a handler are also incorporated in the proposed order.

A system failing to meet pooling standards would be allowed to drop plants from the system until the system does qualify. The handler responsible for assuring that the system qualifies should notify the market administrator of which plants are to be deleted from the system. If the handler does not notify the market administrator, the market administrator would exclude plants from the system beginning with the plant at the bottom of the list of plants submitted by the handler responsible for qualifying the system, and continuing up the list until the system qualifies.

The provisions for supply plant systems are very similar to the provisions currently contained in both the Chicago Regional and Upper Midwest orders. Unlike the Chicago Regional and the Upper Midwest orders, however, the proposed order does not contain a specific shipping requirement for individual plants within a supply plant system. In the current Chicago Regional order, pool supply plant systems have twice the percentage shipping standard of individual supply plants, with individual plants within the systems required to ship 47,000 pounds or three percent of their producer receipts, whichever is less, in five of the six months of August through January. The current Upper Midwest order requires handlers with supply plants in a supply plant system to ship five percent of each handler's Grade A receipts, including milk diverted by the handler to nonpool plants, during one of

VOL 63 ISS 20 JA 30 1998 UMI

the months of August through December.

This proposed rule does not propose providing for the category of supply plants referred to as reserve supply plants. Reserve supply plants ceased to be included in the Chicago Regional order in 1987, while the Upper Midwest continues to provide for them. With year-round shipping requirements, the unlimited ability of the market administrator to change shipping percentages both in level and in area, and the ability of supply plants to form systems, it is proposed that there is no compelling reason to have two categories of supply plants.

A provision to allow plants to remain qualified for up to two consecutive months due to unavoidable circumstances, such as a natural disaster, fire, breakdown of equipment, or work stoppage is included in this proposed order. The provision is contained in the Chicago Regional order and has worked quite well in giving handlers some administrative relief in the face of certain unavoidable circumstances.

Producer Milk

The definition of producer milk determines which milk will be eligible to participate in the Federal order pool. The proposed order provides that milk received at a pool plant directly from producers or from a cooperative association acting as a handler should be eligible to be producer milk. Milk for which the operator of a pool plant is the handler that is delivered directly from the farm to another pool plant should also be considered producer milk. Under certain circumstances, milk delivered to a nonpool plant may also be considered producer milk. Milk delivered directly from a farm to a nonpool plant may be considered producer milk if at least one day's production is received at a pool plant during the dairy farmer's first month as a producer.

In order to qualify as producer milk the milk pooled by a cooperative association acting as a handler described in § 1030.9(c), the cooperative must deliver at least 10 percent of the milk for which it is the handler pursuant to § 1030.9(c) to pool distributing plants, units of pool distributing plants, plants of producer-handlers, partially regulated distributing plants, or distributing plants fully regulated by other Federal milk orders. The shipments to partially regulated distributing plants are limited to the quantity classified as Class I. Qualifying shipments to distributing plants regulated by other Federal milk orders are limited to the same quantity shipped to pool distributing plants and may not be shipped as agreed-upon Class II, Class III or Class IV utilization. These are the same performance requirements that would apply to supply plants. Likewise, the same performance requirements that apply to supply plants would apply to cooperative associations acting as handlers if the market administrator adjusts the shipping percentages.

The Secretary proposes that there would be no significant differences in the treatment of milk received at pool plants under the proposed order and under the Chicago Regional or Upper Midwest orders. There are, however, several differences relating to diverted milk. The proposed order would allow the operator of a pool plant to divert, or ship milk directly from the farm to another pool plant, the milk of producers for which it is the handler, and account for the milk as producer milk at the shipping plant. Allowing either a proprietary pool plant or a cooperative pool plant to divert milk to another pool plant is consistent with the Chicago Regional order. In the Upper Midwest order, milk that is received at a pool plant and for which a cooperative association is the handler is considered producer milk at the receiving plant. The Upper Midwest order specifies that a proprietary handler may divert milk to another pool plant and that such milk will be considered producer milk of the diverting proprietary handler. The proposed language leaves to the discretion of the cooperative association the option of diverting milk to another pool plant from its own pool plant or delivering the milk to the pool plant in its capacity as a handler of producer milk pursuant to § 1030.9(c).

The proposed Upper Midwest order would require that a new producer or a producer who has broken association with the market have at least one day's production received at a pool plant during the first month in which the producer's milk is reported as producer milk. Currently the Chicago Regional order requires a new producer on the market or a producer who has broken association with the market to have at least one day's production received at the pool plant at which the milk is reported during the first month in which the producer's milk is considered to be producer milk eligible for diversion to a nonpool plant. In addition, at least one day's production of a producer's milk must be received at a pool plant in each of the months of August through January to be eligible for diversion to a nonpool plant. The current Upper Midwest order requires that a new producer or a producer who has broken association with the market be received at a pool plant prior to the milk being diverted to a nonpool plant.

There is little or no justification for forcing producer milk to be received at a pool plant to maintain or prove association with the market. Supply plants and cooperatives would be required to ship a fixed percentage of their total milk supply, not just that portion received at their plants, to the fluid market. Since both cooperatives and proprietary handlers can move milk directly from the farm to the fluid market there is little reason to force milk into a pool plant for regulatory purposes only. Certainly the extra cost to the handler of moving milk for regulatory purposes does not enhance economic efficiency or milk quality and in fact decreases economic efficiency and milk quality to the detriment of the entire market.

The proposed order provides that producer milk be priced in the month in which it is picked up at the farm and at the location of the plant at which the milk is physically unloaded into processing facilities or a storage tank. In the current Chicago Regional order milk is priced where milk is pumped within the confines of a plant. The proposed order would eliminate the pricing of milk where it is pumped from truck to truck and price the milk where it is eventually unloaded into processing facilities or a storage tank.

Location Adjustments and Transportation Credits

To help move milk to the fluid market a transportation credit and a procurement credit to be applied to Class I milk are contained in the proposed Upper Midwest order. The *transportation credit* would be computed by multiplying the hundredweight of Class I milk contained in transfers of bulk fluid milk from pool plants to pool distributing plants by the value obtained by multiplying .0028 times the number of miles between the shipping plant and the receiving plant. The transportation credit should be paid to the shipping handler, since the milk would be priced at the location at which it is first received.

The proposed transportation credit is similar to the transportation credit currently contained in the Chicago Regional order. Both the proposed transportation credit and the current credit, which use the same .0028 rate, are applied to Class I milk only. However, in the current Chicago Regional order the credit is based on 110 percent of the Class I milk received at the pool distributing plant, rather than on the Class I milk delivered by the shipping handler, as proposed. Since the transportation credit is computed on the basis of milk classified as Class I at the shipping plant, the credit would be paid to the shipping handler.

Unlike the transportation credit, which is based on mileage and paid only on transfers of bulk milk to pool distributing plants, the *procurement credit* would be paid at the rate of 8 cents per hundredweight of Class I milk transferred or diverted by a pool plant to a pool distributing plant. A procurement credit also will be applied to milk received from producers and from cooperative associations acting as handlers pursuant to § 1030.9(c) based on the pro rata share of producer milk delivered to a pool distributing plant and allocated to Class I.

A transportation credit and procurement credit would be incorporated in the proposed order to assist handlers in supplying the Class I market. These transportation and procurement credits, to be paid on Class I milk only in combination with the Class I price surface discussed elsewhere in this proposed rule, will help handlers move milk to the fluid market by distributing the cost of supplying the fluid market to all market participants who share in the marketwide pool. Handlers and producers who supply the Class I market on a regular basis should not be expected to bear the entire cost of supplying the Class I market while handlers and producers who meet only the minimum requirements derive the benefits of marketwide pooling. Incorporation of a transportation credit and procurement credit on Class I milk in the marketwide pool will assure that at least some of the cost of supplying the Class I market is shared among all market participants.

Mideast Order

Many of the provisions of the proposed Mideast order are explained in the "Identical Provisions" portion of this proposed rule, and need not be addressed here. The provisions that deviate somewhat from those proposed for other order areas are the provisions dealing with standards for determining the pool status of producers and handlers, and those describing the pricing of milk under a component pricing plan that differs slightly from that common to the other orders with proposed multiple component pricing provisions. For the most part, pooling provisions have less effect on the current Michigan Upper Peninsula market than on the 4 other markets included in this consolidated order because Michigan Upper Peninsula is the only remaining individual handler pool in the current Federal order system. Therefore, pooling provisions are discussed in relation to the 4 principal markets included in the proposed Mideast order.

Pool Plant

The proposed Mideast *pool distributing plant* definition would differ from that contained in most of the other proposed orders to make less likely the full Federal regulation of three State-regulated plants, two in Pennsylvania and one in Virginia, that currently are partially regulated under one or more of these orders. These State-regulated handlers must pay a minimum Class I price for milk used in fluid products, often a higher price than would be applied under Federal order regulation. At the same time, Federal regulation of the Pennsylvania and Virginia-regulated handlers under the consolidated order would reduce producer returns while having little effect on handlers' costs of Class I milk.

Specifically, the percentage of a handler's total route dispositions distributed within the marketing area that would result in the handler being fully regulated under the Mideast order should be 30 percent under this order rather than the 15-percent standard proposed for all but one of the other 10 orders. This level of sales in the marketing area can be compared to the current pooling standards for distributing plants in the Eastern Ohio-Western Pennsylvania and Indiana orders. These orders currently have variable (30–50 percent) pooling standards for the percentage of a distributing plant's receipts distributed on routes, combined with a 10–15 percent standard for receipts distributed within the marketing area. Plants that meet the total dispositions standard at the lower end of the range (35 or 40 percent) and distribute only 10 or 15 percent of their receipts on routes in the marketing area would actually distribute approximately 30 percent of their route dispositions on routes in the marketing area. At the same time, it would be difficult to justify establishing a pooling standard so high that the significant role played in a market by a handler having more than 30 percent of its route disposition in the marketing area would fail to be recognized by inclusion in the marketwide pool.

In addition to specifying the in-area route disposition percentage at 30 percent of total routes, the total and in-area route disposition percentages would be calculated on the basis of the total receipts of bulk fluid milk products physically received at the distributing plant. Currently all four of the larger orders to be included in the consolidated Mideast order include milk diverted from the distributing plant in the total bulk receipts used to compute the route disposition percentages.

To assure continued pool qualification for all of the handlers who currently are associated with the Mideast markets, the *pool supply plant* definition of the consolidated Mideast order would provide for all of the types of supply plants that currently qualify for pooling under the 4 principal orders. The Eastern Ohio-Western Pennsylvania pool plant provision includes a plant operated by a cooperative if the cooperative association delivers to distributing plants at least 35 percent of the milk for which it is the handler during the current month or over the preceding 12 months. The Southern Michigan order includes as pool supply plants: (a) a plant that has been a pool plant for 12 consecutive months and has a marketing agreement with a cooperative association, and (b) a system of supply plants operated by one or more handlers. Order 40 also includes some shipments to other Federal order plants and partially regulated distributing plants, in addition to pool distributing plants, as qualifying shipments by supply plants.

The percentage of receipts as qualifying shipments to distributing plants currently ranges from 30 to 40 percent for these orders, with direct deliveries from farms rather than plant transfers limited to half of the required deliveries under three of the orders. All four of the orders require performance of pooling standards by supply plants for the months of September through February, followed by a "free ride" period during which shipping percentages need not be met by supply plants that met the shipping standards during the required period. The Indiana order contains a provision allowing the continued pooling of a plant that fails to meet pooling standards because of circumstances beyond the handler's control.

The proposed shipping standards for pool supply plants are 35 percent for all months, with plants meeting the standard for the months of September through February being allowed to retain their pool status for the immediately following months of March through August. For the purpose of making the 35 percent level of shipping standard less burdensome, up to 90 percent of required shipments should be allowed to be made directly from farms

VOL 63 ISS 20 JA 30 1998 UMI

to distributing plants. The cooperative association plant provided for in the Eastern Ohio-Western Pennsylvania order would be retained, as would the supply plant provisions peculiar to the Southern Michigan order.

Producer Milk

The *producer* and *producer milk* provisions of the orders to be consolidated in the Mideast order are quite similar and differ little from those to be incorporated in the other consolidated orders. The principal difference between some of the individual orders and the consolidated order would be the limit on the percentage of a handler's pooled producer milk that may be diverted to nonpool plants. The Ohio Valley, Indiana and Eastern Ohio-Western Pennsylvania orders all contain 50 percent diversion limits for the months of September through November, January and February and a 60 percent limit for the month of December, with no diversion limit for the months of March through August. The Southern Michigan order contains a 60-percent diversion limit for the months of September through February, with no limit for the months of March through August. In order to assure that all of the milk that has been pooled under these orders continues to qualify for pooling, the diversion limit proposed for the Mideast order is 60 percent for the months of September through February, with no limit for the March through August period. At the same time, the market administrator would be authorized to increase or reduce the diversion limit as needed to maintain orderly marketing and efficient handling of milk in the marketing area.

Multiple Component Pricing

The reporting and payment provisions of the proposed consolidated Mideast order differ somewhat from those of the other consolidated orders that provide for multiple component pricing (MCP) by retaining the current Southern Michigan component pricing plan. The Southern Michigan multiple component pricing plan is very similar to that proposed for the other MCP orders, but prices "fluid carrier" instead of "other solids." The Mideast order language is changed accordingly. This difference appears to be favored by market participants in the Mideast, and would result in very little difference in total payments, either by handlers or to producers whose milk is pooled under the differing provisions.

Central Order

Many of the provisions of the proposed Central order are explained in the "Identical Provisions" portion of this proposed rule, and need not be addressed here. The provisions that deviate somewhat from those proposed for other order areas are the provisions dealing with standards for determining the pool status of producers and handlers. An effort is made to explain significant differences between the pooling provisions of the 8 individual orders included in this consolidation and those of the consolidated order.

Pool Plant

The proposed Central *pool distributing plant* definition should follow closely the provisions contained in most of the other proposed orders. The proposed provisions would make no difference in the pool status of distributing plants currently pooled under the individual orders.

Specifically, the percentage of a handler's total route disposition distributed within the marketing area that would result in the handler being fully regulated under the Central order should be the 15-percent standard proposed for most of the other 10 orders. The minimum percentage of a pool distributing plant's actual physical receipts of bulk fluid milk products that would have to be distributed on route is proposed to be 25. Currently most of the orders to be included in the consolidated Central order include milk diverted from the distributing plant in the total bulk receipts used to compute the route disposition percentages.

The proposed order would provide that a single handler be allowed to form a unit of distributing plants and Class II manufacturing plants, all of which must be located within the marketing area. The unit would have to meet the requirements for a pool distributing plant, and at least one of the plants in the unit would be required to meet the pool distributing plant requirements as a separate plant. Plants in the unit that do not meet the pool distributing plant definition would be required to have disposition of packaged fluid milk products, packaged fluid cream products, or cottage cheese and other Class II products of at least half of their receipts of Grade A bulk fluid milk products, including milk diverted by the plant operator.

The proposed inclusion of Class II manufacturing plants in units with distributing plants is supported because the manufacturing plants produce products such as packaged fluid cream, sour cream, and cottage cheese that are marketed in conjunction with bottled fluid milk products. In addition, some of these plants produce a limited quantity of fluid milk products. Handlers have argued that the operator of a free-standing manufacturing plant that manufactures these complementary products should be able to pool its milk supply for both (or for several) plants as if all of the products were made in the bottling plant.

The *pool supply plant* definition of the consolidated Central order would contain provisions that assure continued pool qualification for any handlers or milk currently associated with the markets consolidated into the proposed Central market. The Iowa order contains no limit on the amount of direct-shipped milk that can be used to qualify a supply plant, and several of the other orders allow such deliveries to make up a portion of qualifying shipments. The proposed order allows direct-shipped milk to be counted as pool qualifying shipments without limit.

The Greater Kansas City, Nebraska-Western Iowa, Southern Illinois-Eastern Missouri, and Southwest Plains orders contain cooperative balancing plant provisions, allowing cooperative-operated plants to be pooled if the cooperative delivers a given percentage of the milk for which it is the handler to pool distributing plants. The proposed Central order also contains such a provision, including in the pool plant definition a cooperative association plant that supplies at least 35 percent of the milk for which it is the handler to pool distributing plants, either during the current month or for the immediately preceding 12-month period. The deliveries to pool distributing plants may include deliveries directly from the farms of producers for whom the co-op is the handler, as well as transfers from the cooperative's plant.

Cooperative association "balancing plants" serve the market as the outlet of last resort. When surplus milk has no other place to go on weekends, holidays, or during months of surplus production, it moves to cooperative association "balancing plants" where it is manufactured into storable products. When production decreases, these plants operate at minimal capacity or may be shut down completely. Cooperative members assume the burden and cost of processing surplus milk through such plants.

Most of the Central orders allow a period during which supply plants do not have to meet shipping percentages if they have done so for the months during which milk production levels are low and demand for fluid milk is high. The Iowa order has reduced shipping standards for such months. The proposed order should include a period during which supply plants that have served the needs of the market when milk supplies are tight are not required to meet shipping standards, but it is reduced from the 5–7 month period existing in the current orders to a 3-month period from May through July.

The percentage of receipts as qualifying shipments to distributing plants currently ranges from 30 to 50 percent for these orders, the Iowa percentage reduced to 20 for the months of December through August.

The proposed shipping standards for pool supply plants under the proposed consolidated order are 35 percent for the months of September through November and January and 25 percent for all other months, with plants meeting the percentage standard for the months of August through April being allowed to retain their pool status for the immediately following months of May through July.

Groups of two or more supply plants should be allowed to form systems of supply plants for the purpose of meeting the shipping requirements, by shipping the same percentage as that required for individual pool supply plants that are not part of such a system. These pool supply plant systems may consist of plants of the same handler or more than one handler, and may contain both proprietary and cooperative handlers. The only requirement affecting each plant within the system is that the plant must be physically located within the marketing area. This restriction is necessary to prevent distant plants from receiving the benefits of participating in the marketwide pool without having an actual association with the market.

As in the other proposed consolidated orders, the market administrator would have the authority to increase or reduce the order's pooling provisions as marketing conditions change for the purpose of assuring that an adequate supply of milk will be available for fluid use, or to assure that the order does not require handlers to undertake uneconomic movements of milk to maintain the pool status of their plants.

Producer Milk

The *producer* and *producer milk* provisions of the orders to be consolidated in the Central order are quite similar to each other and differ little from those to be incorporated in the other consolidated orders. The principal difference between some of the individual orders and the consolidated order would be the limit on the percentage of a handler's pooled producer milk that may be diverted to nonpool plants. The percentage of a handler's milk that may be diverted to nonpool plants varies under the individual orders from 20 percent of milk received at pool plants during some months under the Eastern Colorado order to 70 percent for some months under the Nebraska-Western Iowa and Iowa orders. Most of the orders require each producer's milk to be received at a pool plant at least once each month.

In order to assure that all of the milk that has been pooled under these orders continues to qualify for pooling, the diversion limit proposed for the Central order is 65 percent for the months of September through November and January, and 75 percent for the months of February through April and December. Allowable diversions for the months of May through July would be unlimited. There would be no requirement that each producer's milk be received at pool plants for a minimum number of days per month. At the same time, the market administrator would be authorized to increase or reduce the diversion limit as needed to maintain orderly marketing and efficient handling of milk in the marketing area.

Multiple Component Pricing

The reporting and payment provisions of the proposed consolidated Central order would include those common to other orders with multiple component pricing. These markets have a significant amount of milk used in manufactured products, and component pricing will enable producers to be paid according to the valuable components of their milk.

6d. Western Region

Southwest Order

The proposed consolidated Southwest marketing area is comprised principally of the current Texas and New Mexico-West Texas marketing areas. With regard to milk production and population (consumption), these areas are both in the process of change, but in different ways. Texas has one of the fastest-growing populations in the U.S., and until recently has been able to maintain milk production on a per capita basis. After a significant increase in milk production during the 1988–1994 period, Texas milk production has been declining somewhat, accompanied by the exit of approximately 29 percent of the State's Grade A dairy farmers. If the current trend continues, the Texas market could come to resemble more closely those of the Southeast portion of the U.S., relying significantly on more distant milk supplies to meet the market's Class I and II needs. This scenario currently is true for the southern parts of Texas.

The State of New Mexico has experienced relatively slow population growth, but dramatic increases in milk production—from 1.099 billion pounds in 1988 to an estimated 4.020 billion pounds in 1997. With the declining production in Texas, the New Mexico milkshed will be drawn upon more often to supply Class I and II needs in the Texas demand centers, 500–600 miles distant. Procurement costs would be expected to increase dramatically. In light of these circumstances, proposed provisions in the proposed Southwest order would provide flexibility to handlers supplying the market to prevent inefficient movements of milk and unnecessary costs of operation incurred for the purpose of participating in the marketwide pool.

Prior to enactment of the 1996 Farm Bill, cooperatives operating in the Southwestern Markets had determined that the two milk orders in the region were being operated as one and should be merged. Much discussion took place and proposed order provisions were developed by the principal cooperatives involved. These comments, with numerous others, were considered in the development of this proposed rule for the Southwest marketing area.

Pooling Standards

Most of the pooling standards in the Texas and New Mexico-West Texas orders have been suspended for some time. The rapid expansion of milk production in the region during the late 1980's created a situation in which handlers operating in the region could no longer meet the provisions of the orders while pooling all of their milk supplies.

Pool Distributing Plant. The identical provisions committee recommended that a pool distributing plant distribute as route disposition at least 25% of its bulk fluid milk receipts at the plant, and distribute at least 15% of its total route disposition within the marketing area. One partially regulated plant located in the Texas marketing area would become fully regulated under this provision. The plant has been partially regulated under the Texas order and, periodically, fully regulated under the Chicago Regional order. The proposed percentages for pool distributing plants will cause this plant to become fully regulated under the Southwest order and alleviate the disorderly conditions caused by its shifts between orders. There should be no change in the

VOL 63 ISS 20 JA 30 1998 UMI

plant's costs, since their supply of milk comes from Southwest pool sources.

Pool Supply Plant. The Texas and New Mexico-West Texas orders currently contain a 50% pool supply plant shipping percentage during the Fall months, with a lower percentage or an automatic pooling provision for the remaining months. Currently there are no pool supply plants regulated under either of the Southwest orders, but provision is made for such an operation if it should meet the proposed order's definition. A provision defining cooperative plants located in the marketing area would base pool qualification on total cooperative performance in delivering at least 30 percent of the cooperative's milk supply pooled under this order to pool distributing plants.

Although neither the Texas nor New Mexico-West Texas orders currently have provisions for split-plant operations (plants that have both pool and nonpool portions) or the authority for the Market Administrator to adjust shipping requirements, these provisions are included in the proposed order, as recommended by the identical provisions committee.

Producer Milk

The current Texas and New Mexico-West Texas orders have provisions that require a producer's milk to be received at a pool plant, or touch base, before milk of the producer is eligible to be diverted. Based on comments received, the order would limit diversions of producer milk on the basis of a portion of a handler's total milk supply. At least fifty percent of the milk pooled by a handler should be received at pool plants for the handler's entire milk supply to be pooled. Milk produced by producers located in the marketing area should be eligible for pooling without a particular percentage or number of days' production being required to be received at a pool plant. For producers located outside the marketing area, however, the currently-suspended "touch-base" provision of 15% delivered to pool plants during the month (rather than before diversions are allowed), is continued in this proposed rule.

Diversion limits are suggested to be 50% of a handler's total milk supply. The current Texas order allows an amount equal to one-third of the milk delivered to pool plants to be diverted (this provision is currently suspended), while the (currently suspended) New Mexico-West Texas provision allows 50% of a handler's total milk supply to be diverted. The current Texas order provisions base allowable diversions on deliveries to individual pool plants, greatly exacerbating the time and effort required to keep track of milk movements. The total performance standard will allow handlers to meet diversion limits more easily with more efficient movements of milk. In addition, the increased percentage of allowable diversions will assure that all of the producers whose milk would qualify for pooling under either of the two orders being consolidated would continue to meet pooling qualifications.

Transportation Credits for Surplus Milk

The Texas order currently has a market-wide service payment provision that gives credits for hauling surplus milk located in certain zones in Texas to nonpool plants outside the State for use in manufactured products. The provision has not been included in the proposed Southwest order language because of declining production and increasing balancing plant capacity in the affected areas of Texas.

Payment Provision

The Texas order is one of only a few marketing orders that require handlers to submit the full classified value during the month to the market Administration. In turn, the Market Administrator acts as a clearing house and forwards these proceeds on to the respective organizations. Interested persons have expressed an interest in retaining these provisions, not only for the proposed Southwest order, but for all other orders.

The current Texas payment provision was found necessary because of problems encountered in assuring timely payments by pooled handlers. The provision has been in the Texas order since 1979, and the earlier payment problems have been remedied. Such a provision involves a rather large degree of regulatory intervention between milk processors and their suppliers that should be shown to be necessary to correct existing problems. There is no indication that such problems currently exist, or would exist in the absence of the provision. Nearly all of the milk that will be pooled under the consolidated Southwest order is produced by cooperative members and pooled by the cooperatives. These large, business-oriented organizations should be able to assure that they receive full payment for their members' milk in a timely manner.

Arizona-Las Vegas Order

Many of the provisions of the proposed Arizona-Las Vegas order are explained in the "Identical Provisions" portion of this proposed rule and need not be addressed here. Those provisions that deviate to some extent from the "Identical Provisions" are addressed in this discussion.

Pool Plant

The proposed *pool distributing plant* definition is similar to that contained in most of the other proposed orders. The minimum percentage of a pool distributing plant's physical receipts of bulk fluid milk products that are disposed of as route disposition is proposed to be 25%. The percentage of a handler's total route disposition into the marketing area that would result in a distributing plant becoming fully regulated under the Arizona-Las Vegas order is proposed to be 15%. While this definition differs slightly from the current order language, it provides uniformity with other proposed orders and should result in no additional distributing plants being pooled under the proposed order or any change in the pool status of distributing plants currently pooled.

The proposed *pool supply plant* definition would require a supply plant to ship 50% of its physical receipts of milk from dairy farmers to pool distributing plants during the month in order to be a pool supply plant. This definition would provide for easy, effective order administration and would result in no additional handlers being regulated under the order. There are currently no pool supply plants in the proposed marketing area.

The current Central Arizona order permits a manufacturing plant located in the marketing area that is operated by a cooperative association to be a pool plant, provided that the cooperative ships at least 50% of its member milk to pool plants of other handlers during the current month or the previous 12-month period ending with the current month. This percentage requirement is currently suspended. The proposed order would reduce this percentage to 35%. In conjunction with the market administrator being authorized to increase or reduce the percentage in response to market conditions, the reduced performance standard should enable the continued pooling of producer milk that currently is pooled without resulting in uneconomic handling or disorderly marketing.

The proposed Arizona-Las Vegas order should provide that a single handler be allowed to form a unit of distributing plants and Class II manufacturing plants provided each plant is located within the marketing area. The unit in total would be required to meet the requirements for a pool distributing plant and at least one of the plants in the unit would be required to meet the pool distributing plant definition individually. This provision would provide uniformity with other federal orders and would not change the status of any plants currently pooled. Class II manufacturing plants are included for unit pooling with distributing plants operated by the same handler because such plants produce products that are marketed in conjunction with fluid milk products.

A provision permitting the market administrator to adjust the percentages specified in the pool plant definition will provide the flexibility to respond in a timely manner to changing marketing conditions without the need for a formal hearing process.

Producer

The proposed order contains a *dairy farmer for other markets* definition. A producer could not be pooled under the proposed Arizona-Las Vegas order unless all of the milk from the same farm was pooled under this or some other federal order or unless such nonpooled milk went to a plant with only Class III or Class IV utilization. This differs slightly from the current definition in the Central Arizona Order. Such a provision is needed in the proposed order to prevent dairy farmers whose milk is regularly used for fluid disposition in other markets from pooling the surplus portion of their production under the proposed order.

Producer Milk

The percentage of a handler's pooled milk that may be diverted to nonpool plants is proposed to be 20% in any month. Currently, diversions under the Central Arizona order are limited to eight days' production of a producer during four months of the year, with unlimited diversions the remainder of the year. The 20% diversion limit would result in the amount of milk eligible for diversion being approximately equivalent to eight days' production and would be easier to administer. The 20% limit year round will assure that pooled milk will have a close association with the market's fluid processing plants.

Component Pricing

The proposed Arizona-Las Vegas order does not provide for multiple component pricing. There are six plants that are expected to be regulated under the proposed order: five proprietary distributing plants, and one manufacturing plant operated by a cooperative association. The Class I utilization for the proposed order is expected to be less than 50 percent, a level that would, in some other orders, be an indication that component pricing would be appropriate. However, the Class I utilization at the five distributing plants is more than 80 percent. With the exception of the one cooperative balancing plant, the handlers to be regulated constitute predominantly a Class I market. They have expressed no interest in component pricing, and the fluid nature of much of the market would not seem to warrant multiple component pricing at this time.

Western Order

Many of the provisions of the proposed Western order are explained in the "Identical Provisions" portion of this proposed rule and need not be addressed here. Those provisions that differ from those explained in the "Identical Provisions," or those currently contained in the orders to be consolidated, are discussed below.

Pool Plant

The proposed *pool distributing plant* definition is similar to that contained in most of the other proposed orders. The minimum percentage of a pool distributing plant's physical receipts of bulk fluid milk products that are disposed of as route disposition is proposed to be 25%. The percentage of a handler's total route disposition distributed into the marketing area that would result in a distributing plant becoming fully regulated under the Western order is proposed to be 15%. While this definition differs slightly from the current language of the orders involved in this proposed consolidation, it provides uniformity with other proposed orders and should result in no additional distributing plants being pooled under the proposed order or any change in the pool status of distributing plants currently pooled.

The proposed *pool supply plant* definition would require a supply plant operator to ship 35% of the milk pooled at the supply plant, either by transfer or diversion, to pool distributing plants during the month in order to qualify for pooling. This definition would provide for more efficient order administration and would result in no additional handlers being regulated under the order. The proposed percentage is slightly higher than that contained in the current Southwest Idaho-Eastern Oregon order and slightly lower than that contained in the current Great Basin and Western Colorado orders. This change should result in no milk that is currently associated with any of the three orders losing such association.

The proposed pool supply plant definition includes provision for a March through August period during which a supply plant that has met the order's shipping percentages for the preceding months of September through February to be able to continue to be a pool plant without meeting the shipping standards. As with other proposed orders, the market administrator would have the authority to increase or decrease the order's supply plant pooling standards as marketing conditions change.

The proposed order contains a provision that would permit a manufacturing plant operated by a cooperative association and located in the marketing area to be a pool plant if 35% of the milk for which the cooperative is the handler is received at pool distributing plants during the month or during the immediately preceding 12-month period. This provision is similar to one currently contained in the Great Basin order and in some of the other proposed orders. The proposed order retains the "bulk tank handler" provision that is currently in the Southwestern Idaho-Eastern Oregon order, permitting a handler other than a cooperative association to divert milk to nonpool plants for the handler's account based on shipments of milk to pool plants of other handlers.

Although the three current orders proposed to be consolidated do not contain such a provision, the proposed Western order would provide that a single handler be allowed to form a unit of distributing plants and Class II manufacturing plants provided each plant is located within the marketing area, as suggested by the Identical Provisions committee. The unit in total would be required to meet the requirements for a pool distributing plant and at least one of the plants in the unit would be required to meet the pool distributing plant definition individually. This provision would provide uniformity with other federal orders and would not change the status of any plants currently pooled. Class II manufacturing plants are proposed to be included for unit pooling with distributing plants operated by the same handler because such plants produce products that are marketed in conjunction with fluid milk products.

Producer

The proposed order contains a *dairy farmer for other markets* definition. A producer would not qualify for pooling under the proposed Western order unless all of the milk from the same farm was pooled under this or some other federal order or unless such nonpooled milk went to a plant with only Class III or Class IV utilization.

VOL
63
ISS
20
JA
30
1998
UMI

This differs slightly from the current definition in the Great Basin order. Such a provision is proposed for the consolidated order to prevent dairy farmers whose milk is regularly used for fluid disposition in other markets from pooling the surplus portion of their production on the proposed order.

Producer Milk

The percentage of a handler's pooled milk that may be diverted to nonpool plants is proposed to be 80% in any month. This is identical to the percentage currently included in the Southwestern Idaho-Eastern Oregon order and is only slightly higher than that for the present Great Basin order, which is 75% for cooperatives and 70% for proprietary handlers. The 80% limit on movements of pooled milk to nonpool plants should permit all milk associated with the market that is not needed at pool plants during the month to be pooled and priced under the order. These percentages are higher than those contained in the Western Colorado order, but should not have the effect of encouraging additional amounts of unneeded milk to be pooled in that area.

Reports of Receipts and Utilization and Payroll Reports

The proposed order requires pool handlers to file a "report of receipts and utilization" on or before the seventh day after the end of the month. This is identical to the current reporting date in the Western Colorado and Great Basin orders but two days earlier than the same provision in the Southwestern Idaho-Eastern Oregon order. Almost all handlers currently file reports by FAX or some other form of electronic data transfer, which eliminates delays due to mail handling. A seven-day reporting period should allow adequate time for handlers to prepare reports and will allow the computation and release of producer price information to occur on or before the 12th day after the end of the month.

The date on which the report of payments to producers is proposed to be due to the market administrator under the Western order is on or before the 21st day after the end of the month. This is the same date as that under the Great Basin order, but one day earlier than under the Southwestern Idaho-Eastern Oregon order and two days earlier than the Western Colorado order. The earlier reporting date and announcement of producer prices should assure that an earlier payroll reporting date would not be burdensome.

Multiple Component Pricing

Both the Great Basin order and the Southwestern Idaho-Eastern Oregon order currently have multiple component pricing based on protein; the Western Colorado order does not. The multiple component pricing provisions of the proposed Western order should be the same as those for other proposed orders that provide for multiple component pricing based on protein. The proposed Western order has a significant amount of milk used in manufactured products, especially cheese, and component pricing will enable producers to be paid according to the value of the components of their milk. However, the somatic cell adjustment included in most of the rest of the orders for which component pricing is proposed is not warranted by marketing conditions under the Western order, and such an adjustment is not included.

Payments to and From the Producer Settlement Fund

Payments to the producer settlement fund under the proposed order are due on or before the 14th day after the end of the month. This is two days after the announcement of uniform producer prices, which is an identical time period to that which exists in the three current orders proposed to be consolidated.

Payments from the producer settlement fund under the proposed order would be due on or before the 15th day after the end of the month. This is the same date as under the current Great Basin order, three days earlier than under the Southwestern Idaho-Eastern Oregon order, and one day later than the Western Colorado order. This payment date should be practicable given the use of current banking and transmission techniques.

Payments to Producers and Cooperative Associations

Under the proposed order, partial payments would be due from handlers to producers who are not members of cooperative associations on or before the 25th day of the month in an amount not less than 1.2 times the lowest class price for the preceding month multiplied by the hundredweight of milk received from such producers during the first 15 days of the month. Final payments would be due on or before the 17th day after the end of the month.

Partial payments to cooperative associations would be due on or before the 24th day of the month at the same rate as above, with final payments due on or before the 16th day after the end of the month. These final payment dates represent very little or no change from the orders' present payment dates. The proposed partial payment dates are earlier than those required under the current orders, but are very close to those suggested by the Identical Provisions committee, and compliance should present no hardship to handlers who would already have had the use of the producers' milk for 9 to 23 days.

Pacific Northwest Order

Many of the provisions of the proposed Pacific Northwest order are explained in the "Identical Provisions" portion of this proposed rule, and need not be addressed here. The provisions that deviate somewhat from those proposed for other order areas are the provisions dealing with standards for determining the pool status of producers and handlers, the definition of producer-handlers, the factors upon which payments to producers are calculated, and reporting and payment dates. Because this order is not proposed to be consolidated with any other orders, there is little reason for changing the substance of many of the provisions that are not included in the General Provisions.

Pool Distributing Plant

The pool distributing plant provisions of the proposed Pacific Northwest Order would be changed from the current definition to one that more closely resembles the definition suggested in the identical provisions report. Rather than basing the identification of a pool distributing plant on only 10 percent of the plant's receipts as in-area route dispositions, the order should specify that such a plant have at least 25 percent of its physical receipts distributed as route disposition, and at least 15 percent of its route disposition distributed within the marketing area.

It is not expected that the proposed pooling standard will affect the pool status of any plant that currently does or does not meet the pooling standard of the Pacific Northwest order. In addition, it would remedy a provision that could result in fully regulating a plant that has minimal association with the marketing area.

Pool Supply Plant

For the most part, the current pool supply plant definition of the Pacific Northwest order is appropriate to the marketing conditions in the area. However, the provision that currently *requires* a handler to include producer milk moved directly to pool distributing plants in the shipments on which pool plant performance is calculated would be changed to *allow* the handler to include such movements if the handler wants to qualify its plant for pooling. A plant operator who receives milk at a plant only for manufacturing use also would be able to supply producer milk directly to distributing plants without a requirement that the manufacturing plant be a supply plant.

The Pacific Northwest order's current pool supply plant performance standard of 20 percent of milk receipts shipped to distributing plants should continue to be appropriate for this market. The current March through August period during which supply plants do not have to ship the minimum percentage to distributing plants if they have done so during the previous September through February period would continue to be included in the pool supply plant definition.

As in the other proposed consolidated orders, the market administrator is proposed to have the authority to increase or decrease the order's pooling provisions as marketing conditions change for the purpose of assuring that an adequate supply of milk will be available for fluid use, or to assure that the order does not require handlers to undertake uneconomic movements of milk to maintain: (1) the pool status of their plants, or (2) the pooling of producers who have historically been associated with the market and who help serve Class I needs.

Nonpool Plant

The current definition and exemption for milk produced and processed by state institutions, as contained in the present order's producer-handler definition, would be expanded and moved to be included in the "Nonpool plant" definition contained in the General Provisions. Such entities, along with colleges and universities and charitable organizations, would not be subject to the orders' pricing and pooling provisions as long as they have no sales in commercial channels.

The present Pacific Northwest order provisions allow a state institution to avoid any regulation on the portion of its milk that is used only within the institution, and apply some pricing regulation to that portion that is distributed in commercial channels. In some respects, this arrangement is similar to the situation of partially regulated distributing plants. However, partially regulated distributing plant operators, to avoid obligations under Federal orders, must show that they pay the dairy farmers who ship milk to them at a rate at least commensurate with that paid to producers whose milk is pooled under the order. In any case, they must procure a milk supply in the competitive market. State institutions may have any number of cost advantages over regulated handlers in the production and processing of milk, such as not having to pay a minimum wage and not having to pay property taxes. It would be unjust to allow such institutions to compete with fully regulated handlers in regular commercial channels as if the playing field were level. Therefore, state and other institutions that compete with regulated handlers in regular commercial channels, such as bids for school milk programs, would also be fully regulated.

Producer-Handler

The current Pacific Northwest producer-handler provisions should remain essentially untouched. Some of the "Identical Provisions" features of the producer-handler definition, such as the 150,000-pound thresholds for route dispositions, own farm production, and receipts from pool plants; and the ability to request to operate as both a pool plant and a producer, would be adopted. The rest of the current producer-handler provisions would remain in effect for administrative purposes.

Producer-handlers represent a much larger portion of the Class I dispositions in the Pacific Northwest marketing area than in most other Federal order areas. In many marketing areas, producer-handlers supply 1 percent or less of the Class I sales. In the Pacific Northwest area, however, they furnish almost 10 percent of the market's Class I dispositions. The larger average size of the dairy farmers in the western United States makes more likely the existence of a producer-handler that is a significant factor in the market.

The current order's producer-handler provisions are based on the history of producer-handler operations in this marketing area, reflecting difficulties encountered in order administration, attempts to circumvent order provisions, and court challenges.

In addition to the current order provisions, the producer-handler definition would also contain language clarifying that milk received by the producer-handler at a location other than the producer-handler's processing plant for distribution on routes will be included as a receipt from another handler.

Reserve Supply Unit

The Pacific Northwest order would continue to provide for a cooperative reserve supply unit. The existing provision has many similarities to a reserve supply plant, which is not provided in this order but which is included in several of the proposed consolidated orders.

Under the terms of the present provision, the cooperative members of the reserve supply unit must be located near a pool distributing plant, as a reserve supply plant must be located in the marketing area. Both the reserve supply unit and the reserve supply plant provisions require that the plant or unit operator request prior approval of the market administrator to initiate and cancel their status, both require long-term association with the market, and both provide substantial penalties for failing to meet all required conditions. Although the cooperative unit does not have monthly qualification requirements, it is subject to a call by the market administrator after the market administrator's investigation of the need for supplemental supplies of milk. Because of the current existence of this provision, based on the need shown at a public hearing, and its similarities to a pooling mechanism suggested for other orders, provision for the cooperative reserve supply unit would continue to be included in the proposed Pacific Northwest order.

Producer and Producer Milk

The proposed Pacific Northwest order would contain a "dairy farmer for other markets" provision for each month of the year. The large volume of milk production in California and California's quota system give dairy farmers an incentive to pool production in a volume equal to their quota pounds on the California order, and then attempt to share in the Pacific Northwest Class I market with their over-quota production, for which returns under the California order are much less. At the same time, none of the California Class I returns would be shared with Pacific Northwest producers. Similarly, the reserve supplies for the State-regulated markets of Western Nevada and Montana should not be allowed to share in returns from the Pacific Northwest order's higher classes of utilization while enjoying the benefits of the State orders' Class I returns.

The current provisions of the Pacific Northwest order do not require that a producer's milk be received at pool plants for the producer's first pooled delivery on the market or for any specified period. If a handler meets its overall performance requirements for supplying milk to the market, it should make no difference which individual producer's milk is actually delivered to pool plants as long as the milk of each

VOL 63 ISS 20 JA 30 1998 UMI

producer participating in the pool is Grade A and available to the market if and when needed. It is expensive, inefficient, and unnecessary to move milk from areas close to nonpool manufacturing plants to bottling plants in the city markets when that milk is not needed for bottling. For the above reasons and the physical fact that there are often great distances and mountainous terrain between plants and farms in the more sparsely populated West, no "touch base" requirements should be included.

This order and other western orders have allowed producers to pool milk on more than one order during the same month. Because of the locations of a number of dairy farmers, their milk may be used by pool plants regulated under more than one order in a single month. These producers also represent a reserve supply for more than one market. Large, multi-market handlers should be given the flexibility to market and transport their milk to fulfill the needs of their customers in the most efficient way possible.

The small degree of change from the current provisions necessary in the pooling provisions of the proposed Pacific Northwest results in very little change proposed for the order's diversion limits. The limit of 80% of the handler's supply of producer milk should remain unchanged, with the months during which the percentage is effective changed from September through April to September through February. These months will correspond to the months during which supply plants must ship 20 percent of their receipts to pool distributing plants. There would be no limit on diversions of producer milk for the months of March through August. These delivery standards have not been overly restrictive nor associated unneeded supplies with the market and should be allowed to continue without change.

Payments to Producers and Cooperative Associations

Although the current Pacific Northwest order contains a multiple component pricing plan very like that proposed to be standard for the consolidated orders, it does not now and would not under this reform process contain a somatic cell adjustment provision. The level of somatic cells in the western U.S. is generally lower than in the east, with an overall average of approximately 250,000 instead of 350,000. This lower somatic cell count would seem to reduce the need for such a provision. Historically, the principal argument for a somatic cell adjuster has been the negative effect of somatic cells on the cheese yields. Although cheese manufacturing in the Northwest is increasing, most cheese manufacturing is done by cooperative associations who have expressed the opinion that an adjustment for somatic cells is a quality issue best dealt with internally. The somatic cell adjustments in the proposed consolidated orders are not incorporated in the proposed Pacific Northwest order.

Announcement of Producer Prices

The dates on which handler reports, market administrator's announcement of producer prices, and payment to producers would remain unchanged from those of the current order.

8. Miscellaneous and Administrative

(a) Consolidation of the Marketing Service, Administrative Expense, and Producer-Settlement Funds

To complete the proposed consolidation of the present 31 Federal orders effectively and equitably, the reserve balances in the marketing service, administrative expense, and producer-settlement funds that have resulted under the individual orders would be combined.

The balances in these three funds should be combined on the same basis that the marketing areas are consolidated into regional orders herein. For instance, the Texas and New Mexico-West Texas marketing areas are merged into a new regional Southwest order. Accordingly, the reserve balances in the marketing service, administrative expense and producer-settlement funds of the two individual orders likewise should be combined into three separate funds established under the consolidated Southwest order.

The marketing areas of the proposed 11 consolidated orders essentially represent the territory covered by the 31 individual orders plus the territory included in the former Tennessee Valley marketing area. Because of this, the handlers and producers servicing the milk needs of the individual markets will continue to furnish the milk needs of the applicable regional market for the most part.

In that regard, the reserve balances in the funds that have resulted under the 31 individual orders should be combined on a marketing area basis into the appropriate separate fund established for each of the 11 regional orders. Any liabilities of such funds under the individual orders would be paid from the appropriate newly established fund of the applicable regional order. Similarly, obligations that are due the separate funds under the individual orders would be paid to the appropriate combined fund of the applicable consolidated order.

In most cases, the entire marketing area of an order or orders is included in the proposed consolidated marketing area of one of the 11 regional orders. Three present marketing areas would be split between two consolidated orders. One county of the present Louisville-Lexington-Evansville (Order 46) marketing area would be included in the Southeast order, and the rest of the territory in the Order 46 marketing area would be included under the Appalachian order. Even though one Order 46 county is included in the proposed Southeast order, all of the present Order 46 producers and handlers are expected to be covered under the proposed consolidated Appalachian order. Accordingly, the balances in the Order 46 marketing service, administrative expense, and producer settlement funds should be consolidated into the three separate funds established for the consolidated Appalachian market.

Different regulatory situations, however, will occur in the other two instances where a current marketing area is divided between two proposed consolidated orders. One county of the current Great Basin (Order 139) marketing area would be included in the consolidated Arizona-Las Vegas order and the rest of the Order 139 marketing area would be included in the consolidated marketing area for the West. Some of the present Order 139 producers and handlers would become regulated under the Arizona-Las Vegas consolidated order and others would become regulated under the regional order for the West. Similarly, two zones of the Michigan Upper Peninsula (Order 44) marketing area would be included in the consolidated Upper Midwest marketing area and the other zone of the Order 44 marketing area would be included in the marketing area for the Mideast regional order. Accordingly, any reserve balances in the marketing service, administrative expense and producer-settlement funds of these two individual orders should be divided equitably among the applicable consolidated orders.

The money accumulated in the marketing service funds of the individual orders is that which has been paid by producers for whom the market administrators are performing such services. Since the marketing areas of the proposed 11 regional orders encompass the territory covered by the individual orders, for the most part, the producers who have contributed to the marketing service funds of the individual orders are expected to continue supplying milk for the consolidated orders. Since marketing service programs will be continued for these producers under the regional orders, it would be appropriate to combine the reserve balances in the marketing service funds of the order or orders that are represented in the consolidation of each of the proposed 11 regional orders.

When the proposed consolidated marketing area includes the marketing area of one or more individual orders, any remaining balance in the marketing service fund of the individual order or orders should be combined in the marketing service fund established for the applicable consolidated order. If a current marketing area is split between two consolidated markets and the regulatory status of producers and handlers is divided between the two regional orders, as is the case with the Michigan Upper Peninsula and Great Basin orders, any balance in the marketing service fund of the individual order should be prorated between the two consolidated orders on the basis of the amount of milk subject to the marketing service deduction that will be covered by each respective regional order (using producer deliveries in the last month the individual orders are in effect but assuming that the marketing areas had been consolidated).

The money paid to the administrative expense fund is each handler's proportionate share of the cost of administering the order. For the most part, handlers currently regulated under the individual orders will continue to be regulated under the proposed consolidated orders. In view of this, it would be an unnecessary administrative and financial burden to allocate the reserve funds of the individual orders back to handlers and then accumulate an adequate reserve for each of the consolidated orders. It would be as equitable and more efficient to combine the remaining administrative monies accumulated under the individual orders in the same manner as the marketing areas are proposed to be combined.

For the orders where the proposed consolidated marketing area includes the regulated territory of one or more of the individual orders, any remaining balance in the administrative expense fund of the individual order or orders would be combined into the administrative expense fund established for the applicable consolidated order. In the situations where the current individual marketing area is split and the regulatory status of producers and handlers is divided (as in the case of the Michigan Upper Peninsula and Great Basin orders) between two consolidated marketing areas, the remaining balance in the administrative expense fund should be prorated between the two regional orders on the basis of the amount of milk that would be pooled and priced under each respective consolidated order (using producer milk deliveries during the last month the individual orders are in effect but assuming that the orders had been consolidated).

Likewise, the producer-settlement fund balances of the individual orders should be combined. They should be combined on the same basis as the marketing areas are consolidated herein. This will enable the producer-settlement funds of the consolidated orders to continue without interruption.

The producers currently supplying the individual markets are expected to supply milk for the proposed consolidated markets. Thus, monetary balances in the producer-settlement funds of the individual orders now would be reflected in the pay prices of the producers who will benefit from the applicable consolidated orders. The combined fund for each proposed consolidated order also would serve as a contingency fund from which money would be available to meet obligations (resulting from audit adjustments and otherwise) occurring under the individual orders.

The same procedure used in combining the remaining balances in the marketing service and administrative expense funds of the individual orders should be followed in combining the producer-settlement fund balances when the individual orders are consolidated. For orders where the consolidated marketing area includes the marketing area of one or more orders, any remaining balance in the producer-settlement fund of the individual order or orders would be combined into the producer-settlement fund established for the applicable consolidated order. In the two situations (Michigan Upper Peninsula and Great Basin) where the marketing area of a current order is split between two proposed consolidated orders and some of the individual market's producers and handlers would be regulated under one consolidated order and others would be regulated under another consolidated order, the balance in the producer-settlement fund should be divided equitably between the two consolidated orders. Since the Michigan Upper Peninsula order is an individual-handler pool market, no producer-settlement fund is provided. The remaining balance in the producer-settlement fund of the Great Basin order should be prorated between the consolidated Arizona-Las Vegas order and the regional order for the West on the basis of the amount of milk that will be pooled and priced under each respective proposed consolidated order (using producer milk deliveries during the last month the individual orders are in effect but assuming that the orders had been consolidated).

(b) Consolidation of the Transportation Credit Balancing Funds

To complete the consolidation process, the reserve balances in the transportation credit balancing funds that are in effect now under three Southeast orders (Carolina, Order 5; Southeast, Order 7; and Louisville-Lexington-Evansville, Order 46) should be consolidated also. These funds should be combined on a marketing area basis. In that regard, the reserve balances in the transportation credit balancing funds of the Carolina and Louisville-Lexington-Evansville orders should be consolidated into a newly established transportation credit balancing fund for the Appalachian order, which also includes the current marketing areas of these two orders with the exception of one county. Similarly, the reserve balance in the transportation credit balancing fund of the present Southeast order should be transferred to the consolidated Southeast order, which includes all of the marketing area of the present Southeast order. These procedures will enable the transportation credits to continue without interruption under these two proposed consolidated orders.

(c) Proposed General Findings

The proposed findings and determinations hereinafter set forth supplement those that were made when the aforesaid orders were first issued and when they were amended. The previous findings and determinations are hereby ratified and confirmed, except where they may conflict with those set forth herein.

(1) The tentative marketing agreements and the orders, as hereby proposed to be amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The parity prices of milk as determined pursuant to section 2 of the Act are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in each of the aforesaid marketing areas, and the minimum

VOL 63 ISS 20 JA 30 1998 UMI

prices specified in the tentative marketing agreements and the orders, as hereby proposed to be amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest;

(3) The tentative marketing agreements and the orders, as hereby proposed to be amended, will regulate the handling of milk in the same manner as, and will be applicable only to persons in the respective classes of industrial and commercial activity specified in the marketing agreements;

(4) All milk and milk products handled by handlers, as defined in the tentative marketing agreements and the orders as hereby proposed to be amended, are in the current of interstate commerce or directly burden, obstruct, or affect interstate commerce in milk or its products; and

(5) It is hereby found that the necessary expense of the market administrator for the maintenance and functioning of such agency will require the payment by each handler, as his pro rata share of such expense, 5 cents per hundredweight or such lesser amount as the Secretary may prescribe, with respect to milk specified in § 1000.85 of the General Provisions.

Proposed Marketing Agreements and Order Amending the Orders

The proposed marketing agreements are not included in this proposed rule because the regulatory provisions thereof would be the same as those contained in the orders, as hereby proposed to be amended. The following order amending the orders regulating the handling of milk in the respective marketing areas of these orders is proposed as the detailed and appropriate means by which the foregoing conclusions may be carried out.

List of Subjects in 7 CFR Chapter X

Milk marketing orders.

For the reasons set forth in the preamble and under the authority of 7 U.S.C. 601–674, Title 7, chapter X, CFR parts 1002, 1004, 1012, 1013, 1036, 1040, 1044, 1046, 1049, 1050, 1064, 1065, 1068, 1076, 1079, 1106, 1135, 1137, 1138, and 1139 are proposed to be removed, and Parts 1000, 1001, 1005, 1006, 1007, 1030, 1032, 1033, 1124, 1126, 1131, and 1134 are proposed to be revised as follows:

PART 1000—GENERAL PROVISIONS OF FEDERAL MILK MARKETING ORDERS

Subpart A—Scope and Purpose

Sec.
1000.1 Scope and purpose of Part 1000.

Subpart B—Definitions

1000.2 General definitions.
1000.3 Route disposition.
1000.4 Plant.
1000.5 Distributing plant.
1000.6 Supply plant.
1000.8 Nonpool plant.
1000.9 Handler.
1000.14 Other source milk.
1000.15 Fluid milk product.
1000.16 Fluid cream product.
1000.17 [Reserved]
1000.18 Cooperative association.
1000.19 Commercial food processing establishment.

Subpart C—Rules of Practice and Procedure Governing Market Administrators

1000.25 Market administrator.

Subpart D—Rules Governing Order Provisions

1000.26 Continuity and separability of provisions.

Subpart E—Rules of Practice and Procedure Governing Handlers

1000.27 Handler responsibility for records and facilities.
1000.28 Termination of obligations.

Subpart F—Classification of Milk

1000.40 Classes of utilization.
1000.41 [Reserved]
1000.42 Classification of transfers and diversions.
1000.43 General classification rules.
1000.44 Classification of producer milk.
1000.45 Market administrator's reports and announcements concerning classification.

Subpart G—Class Prices

1000.50 Class prices and component prices.
1000.51 [Reserved]
1000.52 Adjusted Class I differentials.
1000.53 Announcement of class prices and component prices.
1000.54 Equivalent price.

Subpart H—Payments for Milk

1000.70 Producer-settlement fund.
1000.71 Payments to the producer-settlement fund.
1000.72 Payments from the producer-settlement fund.
1000.76 Payments by a handler operating a partially regulated distributing plant.
1000.77 Adjustment of accounts.
1000.78 Charges on overdue accounts.

Subpart I—Administrative Assessment and Marketing Service Deduction

1000.85 Assessment for order administration.
1000.86 Deduction for marketing services.

Subpart J—Miscellaneous Regulations

1000.90 Dates.
1000.91–1000.92 [Reserved]
1000.93 OMB control number assigned pursuant to the Paperwork Reduction Act.

Authority: 7 U.S.C. 601–674.

Subpart A—Scope and Purpose

§ 1000.1 Scope and purpose of Part 1000.

This part sets forth certain terms, definitions, and provisions which shall be common to and part of each Federal milk marketing order in 7 CFR, chapter X except as specifically defined otherwise, or modified, or otherwise provided, in an individual order in 7 CFR, chapter X.

Subpart B—Definitions

§ 1000.2 General definitions.

(a) *Act* means Public Act No. 10, 73d Congress, as amended and as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 *et seq.*).

(b) *Order* means the applicable part of Title 7 of the Code of Federal Regulations issued pursuant to Section 8c of the Act as a Federal milk marketing order (as amended).

(c) *Department* means the U.S. Department of Agriculture.

(d) *Secretary* means the Secretary of Agriculture of the United States or any officer or employee of the Department to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated, to act in his stead.

(e) *Person* means any individual, partnership, corporation, association, or other business unit.

§ 1000.3 Route disposition.

Route disposition means a delivery to a retail or wholesale outlet (except a plant), either directly or through any distribution facility (including disposition from a plant store, vendor, or vending machine) of a fluid milk product in consumer-type packages or dispenser units classified as Class I milk.

§ 1000.4 Plant.

(a) Except as provided in paragraph (b) of this section, *plant* means the land, buildings, facilities, and equipment constituting a single operating unit or establishment at which milk or milk products are received, processed, or packaged, including a facility described in paragraph (b)(2) of this section if the facility receives the milk of more than one dairy farmer.

(b) Plant shall not include:

(1) A separate building without stationary storage tanks that is used only as a reload point for transferring bulk milk from one tank truck to another or a separate building used only as a distribution point for storing packaged fluid milk products in transit for route disposition; or

(2) An on-farm facility operated as part of a single dairy farm entity for the separation of cream and skim or the removal of water from milk.

§ 1000.5 Distributing plant.

Distributing plant means a plant that is approved by a duly constituted regulatory agency for the handling of Grade A milk and at which fluid milk products are processed or packaged and from which there is route disposition.

§ 1000.6 Supply plant.

Supply plant means a plant, other than a distributing plant, that is approved by a duly constituted regulatory agency for the handling of Grade A milk and at which fluid milk products are received or from which fluid milk products are transferred or diverted.

§ 1000.8 Nonpool plant.

Nonpool plant means any milk receiving, manufacturing, or processing plant other than a pool plant. The following categories of nonpool plants are further defined as follows:

(a) *A plant fully regulated under another Federal order* means a plant that is fully subject to the pricing and pooling provisions of another Federal order.

(b) *Producer-handler plant* means a plant operated by a producer-handler as defined under any Federal order.

(c) *Partially regulated distributing plant* means a nonpool plant that is not a plant fully regulated under another Federal order, a producer-handler plant, or an exempt plant, from which there is route disposition in the marketing area during the month.

(d) *Unregulated supply plant* means a supply plant that does not qualify as a pool supply plant and is not a plant fully regulated under another Federal order, a producer-handler plant, or an exempt plant.

(e) *An exempt plant* means a plant described in this paragraph that is exempt from the pricing and pooling provisions of any order provided that the operator of the plant files reports as prescribed by the market administrator to enable determination of the handler's exempt status:

(1) A plant that is operated by a governmental agency that has no route disposition in commercial channels;

(2) A plant that is operated by a duly accredited college or university disposing of fluid milk products only through the operation of its own campus with no route disposition in commercial channels;

(3) A plant from which the total route disposition is for individuals or institutions for charitable purposes without remuneration; or

(4) A plant that has route disposition of 150,000 pounds or less during the month.

§ 1000.9 Handler.

Handler means:

(a) Any person who operates a pool plant or a nonpool plant.

(b) Any person who receives packaged fluid milk products from a plant for resale and distribution to retail or wholesale outlets, any person who as a broker negotiates a purchase or sale of fluid milk products or fluid cream products from or to any pool or nonpool plant, and any person who by purchase or direction causes milk of producers to be picked up at the farm and/or moved to a plant. Persons who qualify as handlers only under this paragraph under any Federal milk order in 7 CFR, chapter X are not subject to the payment provisions of §§ ____.70, ____.71, ____.72, ____.73, ____.76, and ____.85 of that order.

(c) Any cooperative association with respect to milk that it receives for its account from the farm of a producer and delivers to pool plants or diverts to nonpool plants pursuant to § __.13 of the order. The operator of a pool plant receiving milk from a cooperative association may be the handler for such milk if both parties notify the market administrator of this agreement prior to the time that the milk is delivered to the pool plant and the plant operator purchases the milk on the basis of weights determined from its measurement at the farm and butterfat tests determined from farm bulk tank samples.

§ 1000.14 Other source milk.

Other source milk means all skim milk and butterfat contained in or represented by:

(a) Receipts of fluid milk products and bulk fluid cream products from any source other than producers, handlers described in § 1000.9(c), or pool plants;

(b) Products (other than fluid milk products, fluid cream products, and products produced at the plant during the same month) from any source which are reprocessed, converted into, or combined with another product in the plant during the month; and

(c) Receipts of any milk product (other than a fluid milk product or a fluid cream product) for which the handler fails to establish a disposition.

§ 1000.15 Fluid milk product.

(a) Except as provided in paragraph (b) of this section, *fluid milk product* means any milk products in fluid or frozen form containing less than 9 percent butterfat that are intended to be used as beverages. Such products include, but are not limited to: Milk, fat-free milk, lowfat milk, light milk, reduced fat milk, milk drinks, eggnog and cultured buttermilk, including any such beverage products that are flavored, cultured, modified with added nonfat milk solids, sterilized, concentrated (to not more than 50 percent total milk solids), or reconstituted.

(b) The term fluid milk product shall not include:

(1) Plain or sweetened evaporated milk/skim milk, sweetened condensed milk/skim milk, formulas especially prepared for infant feeding or meal replacement, any product that contains by weight less than 6.5 percent nonfat milk solids, and whey; and

(2) The quantity of skim milk equivalent in any modified product specified in paragraph (a) of this section that is greater than an equal volume of an unmodified product of the same nature and butterfat content.

§ 1000.16 Fluid cream product.

Fluid cream product means cream (other than plastic cream or frozen cream), including sterilized cream, or a mixture of cream and milk or skim milk containing 9 percent or more butterfat, with or without the addition of other ingredients.

§ 1000.17 [Reserved]

§ 1000.18 Cooperative association.

Cooperative association means any cooperative marketing association of producers which the Secretary determines is qualified under the provisions of the Capper-Volstead Act, has full authority in the sale of milk of its members, and is engaged in marketing milk or milk products for its members. A federation of two or more cooperatives incorporated under the laws of any state will be considered a cooperative association under any Federal milk order if all member cooperatives meet the requirements of this section.

§ 1000.19 Commercial food processing establishment.

Commercial food processing establishment means any facility, other than a milk plant, to which fluid milk products and fluid cream products are

VOL 63 ISS 20 JA 30 1998 UMI

disposed of, or producer milk is diverted, that uses such receipts as ingredients in food products and has no other disposition of fluid milk products other than those received in consumer-type packages (1 gallon or less). Producer milk diverted to commercial food processing establishments shall be subject to the same provisions relating to diversions to plants, including, but not limited to, §§ ____.13 and ____.52 of each Federal milk order in 7 CFR, chapter X.

Subpart C—Rules of Practice and Procedure Governing Market Administrators

§ 1000.25 Market administrator.

(a) *Designation.* The agency for the administration of the order shall be a market administrator selected by the Secretary and subject to removal at the Secretary's discretion. The market administrator shall be entitled to compensation determined by the Secretary.

(b) *Powers.* The market administrator shall have the following powers with respect to each order under his/her administration:

(1) Administer the order in accordance with its terms and provisions;

(2) Maintain funds outside of the United States Department of the Treasury for the purpose of administering the order;

(3) Make rules and regulations to effectuate the terms and provisions of the order;

(4) Receive, investigate, and report complaints of violations to the Secretary; and

(5) Recommend amendments to the Secretary.

(c) *Duties.* The market administrator shall perform all the duties necessary to administer the terms and provisions of each order under his/her administration, including, but not limited to, the following:

(1) Employ and fix the compensation of persons necessary to enable him/her to exercise the powers and perform the duties of the office;

(2) Pay out of funds provided by the administrative assessment, except expenses associated with functions for which the order provides a separate charge, all expenses necessarily incurred in the maintenance and functioning of the office and in the performance of the duties of the office, including the market administrator's compensation;

(3) Keep records which will clearly reflect the transactions provided for in the order, and upon request by the Secretary, surrender the records to a successor or such other person as the Secretary may designate;

(4) Furnish information and reports requested by the Secretary and submit office records for examination by the Secretary;

(5) Announce publicly at his/her discretion, unless otherwise directed by the Secretary, by such means as he/she deems appropriate, the name of any handler who, after the date upon which the handler is required to perform such act, has not:

(i) Made reports required by the order;

(ii) Made payments required by the order; or

(iii) Made available records and facilities as required pursuant to § 1000.27;

(6) Prescribe reports required of each handler under the order. Verify such reports and the payments required by the order by examining records (including such papers as copies of income tax reports, fiscal and product accounts, correspondence, contracts, documents or memoranda of the handler, and the records of any other persons that are relevant to the handler's obligation under the order), by examining such handler's milk handling facilities, and by such other investigation as the market administrator deems necessary for the purpose of ascertaining the correctness of any report or any obligation under the order. Reclassify skim milk and butterfat received by any handler if such examination and investigation discloses that the original classification was incorrect;

(7) Furnish each regulated handler a written statement of such handler's accounts with the market administrator promptly each month. Furnish a corrected statement to such handler if verification discloses that the original statement was incorrect; and

(8) Prepare and disseminate publicly for the benefit of producers, handlers, and consumers such statistics and other information concerning operation of the order and facts relevant to the provisions thereof (or proposed provisions) as do not reveal confidential information.

Subpart D—Rules Governing Order Provisions

§ 1000.26 Continuity and separability of provisions.

(a) *Effective time.* The provisions of the order or any amendment to the order shall become effective at such time as the Secretary may declare and shall continue in force until suspended or terminated.

(b) *Suspension or termination.* The Secretary shall suspend or terminate any or all of the provisions of the order whenever he/she finds that such provision(s) obstructs or does not tend to effectuate the declared policy of the Act. The order shall terminate whenever the provisions of the Act authorizing it cease to be in effect.

(c) *Continuing obligations.* If upon the suspension or termination of any or all of the provisions of the order there are any obligations arising under the order, the final accrual or ascertainment of which requires acts by any handler, by the market administrator or by any other person, the power and duty to perform such further acts shall continue notwithstanding such suspension or termination.

(d) *Liquidation.* (1) Upon the suspension or termination of any or all provisions of the order, the market administrator, or such other liquidating agent designated by the Secretary, shall, if so directed by the Secretary, liquidate the business of the market administrator's office, dispose of all property in his/her possession or control, including accounts receivable, and execute and deliver all assignments or other instruments necessary or appropriate to effectuate any such disposition; and

(2) If a liquidating agent is so designated, all assets and records of the market administrator shall be transferred promptly to such liquidating agent. If, upon such liquidation, the funds on hand exceed the amounts required to pay outstanding obligations of the office of the market administrator and to pay necessary expenses of liquidation and distribution, such excess shall be distributed to contributing handlers and producers in an equitable manner.

(e) *Separability of provisions.* If any provision of the order or its application to any person or circumstances is held invalid, the application of such provision and of the remaining provisions of the order to other persons or circumstances shall not be affected thereby.

Subpart E—Rules of Practice and Procedure Governing Handlers

§ 1000.27 Handler responsibility for records and facilities.

Each handler shall maintain and retain records of its operations and make such records and its facilities available to the market administrator. If adequate records of a handler, or of any other persons, that are relevant to the obligation of such handler are not maintained and made available, any

skim milk and butterfat required to be reported by such handler for which adequate records are not available shall be considered as used in the highest-priced class.

(a) *Records to be maintained.* (1) Each handler shall maintain records of its operations (including, but not limited to, records of purchases, sales, processing, packaging, and disposition) as are necessary to verify whether such handler has any obligation under the order, and if so, the amount of such obligation. Such records shall be such as to establish for each plant or other receiving point for each month:

(i) The quantities of skim milk and butterfat contained in, or represented by, products received in any form, including inventories on hand at the beginning of the month, according to form, time, and source of each receipt;

(ii) The utilization of all skim milk and butterfat showing the respective quantities of such skim milk and butterfat in each form disposed of or on hand at the end of the month; and

(iii) Payments to producers, dairy farmers and cooperative associations, including the amount and nature of any deductions and the disbursement of money so deducted.

(2) Each handler shall keep such other specific records as the market administrator deems necessary to verify or establish such handler's obligation under the order.

(b) *Availability of records and facilities.* Each handler shall make available all records pertaining to such handler's operations and all facilities the market administrator finds are necessary to verify the information required to be reported by the order and/or to ascertain such handler's reporting, monetary or other obligation under the order. Each handler shall permit the market administrator to weigh, sample, and test milk and milk products and observe plant operations and equipment and make available to the market administrator such facilities as are necessary to carry out his/her duties.

(c) *Retention of records.* All records required under the order to be made available to the market administrator shall be retained by the handler for a period of 3 years to begin at the end of the month to which such records pertain. If, within such 3-year period, the market administrator notifies the handler in writing that the retention of such records, or of specified records, is necessary in connection with a proceeding under section 8c(15)(A) of the Act or a court action specified in such notice, the handler shall retain such records, or specified records, until further written notification from the market administrator. The market administrator shall give further written notification to the handler promptly upon the termination of the litigation or when the records are no longer necessary in connection therewith.

§ 1000.28 Termination of obligations.

The provisions of this section shall apply to any obligation under the order for the payment of money:

(a) Except as provided in paragraphs (b) and (c) of this section, the obligation of any handler to pay money required to be paid under the terms of the order shall terminate 2 years after the last day of the month during which the market administrator receives the handler's report of receipts and utilization on which such obligation is based, unless within such 2-year period, the market administrator notifies the handler in writing that such money is due and payable. Service of such written notice shall be complete upon mailing to the handler's last known address and it shall contain, but need not be limited to, the following information:

(1) The amount of the obligation;

(2) The month(s) on which such obligation is based; and

(3) If the obligation is payable to one or more producers or to a cooperative association, the name of such producer(s) or such cooperative association, or if the obligation is payable to the market administrator, the account for which it is to be paid.

(b) If a handler fails or refuses, with respect to any obligation under the order, to make available to the market administrator all records required by the order to be made available, the market administrator may notify the handler in writing, within the 2-year period provided for in paragraph (a) of this section, of such failure or refusal. If the market administrator so notifies a handler, the said 2-year period with respect to such obligation shall not begin to run until the first day of the month following the month during which all such records pertaining to such obligation are made available to the market administrator.

(c) Notwithstanding the provisions of paragraphs (a) and (b) of this section, a handler's obligation under the order to pay money shall not be terminated with respect to any transaction involving fraud or willful concealment of a fact, material to the obligation, on the part of the handler against whom the obligation is sought to be imposed.

(d) Unless the handler files a petition pursuant to section 8c(15)(A) of the Act and the applicable rules and regulations (7 CFR 900.50 *et seq.*) within the applicable 2-year period indicated below, the obligation of the market administrator:

(1) To pay a handler any money which such handler claims is due under the terms of the order shall terminate 2 years after the end of the month during which the skim milk and butterfat involved in the claim were received; or

(2) To refund any payment made by a handler (including a deduction or offset by the market administrator) shall terminate 2 years after the end of the month during which payment was made by the handler.

Subpart F—Classification of Milk

§ 1000.40 Classes of utilization.

Except as provided in § 1000.42, all skim milk and butterfat required to be reported pursuant to § ____.30 of each Federal milk order in 7 CFR, chapter X shall be classified as follows:

(a) *Class I milk* shall be all skim milk and butterfat:

(1) Disposed of in the form of fluid milk products, except as otherwise provided in this section;

(2) Used to produce fluid milk products modifed in volume by the addition of nonmilk ingredients and/or previously processed and priced skim milk and butterfat, including milkshake and milkshake drinks sold in containers less than one half-gallon;

(3) In packaged fluid milk products in inventory at the end of the month, exclusive of skim milk and butterfat accounted for in paragraph (a)(2) of this section; and

(4) In shrinkage assigned pursuant to § 1000.43(b).

(b) *Class II milk* shall be all skim milk and butterfat:

(1) In fluid milk products in containers larger than 1 gallon and fluid cream products disposed of or diverted to a commercial food processing establishment if the market administrator is permitted to audit the records of the commercial food processing establishment for the purpose of verification. Otherwise, such uses shall be Class I;

(2) Used to produce:

(i) Cottage cheese, lowfat cottage cheese, dry curd cottage cheese, ricotta cheese, pot cheese, Creole cheese, cream cheese and any similar soft, high-moisture cheese resembling cottage cheese in form or use;

(ii) Milkshake and ice milk mixes (or bases), frozen desserts, and frozen dessert mixes distributed in half-gallon containers or larger and intended to be used in soft or semi-solid form;

(iii) Aerated cream, frozen cream, sour cream, sour half-and-half, sour cream

VOL 63 ISS 20 JA 30 1998 UMI

mixtures containing nonmilk items, yogurt, and any other semi-solid product resembling a Class II product;

(iv) Custards, puddings, pancake mixes, coatings, batter, and similar products;

(v) Buttermilk biscuit mixes and other buttermilk for baking that contain food starch in excess of 2% of the total solids, provided that the product is labeled to indicate the food starch content;

(vi) Formulas especially prepared for infant feeding or meal replacement;

(vii) Candy, soup, bakery products and other prepared foods which are processed for general distribution to the public, and intermediate products, including sweetened condensed milk, to be used in processing such prepared food products;

(viii) A fluid cream product or any product containing artificial fat or fat substitutes that resembles a fluid cream product, except as otherwise provided in paragraph (c) of this section;

(ix) Any product not otherwise specified in this section; and

(3) In shrinkage assigned pursuant to § 1000.43(b).

(c) *Class III milk* shall be all skim milk and butterfat:

(1) Used to produce:

(i) Spreadable cheeses (other than cream cheese) and hard cheese of types that may be shredded, grated, or crumbled and that are not included in paragraph (b)(2)(i) of this section;

(ii) Plastic cream, anhydrous milkfat, and butteroil; and

(iii) Evaporated or sweetened condensed milk/skim milk in a consumer-type package;

(2) In inventory at the end of the month of fluid milk products and fluid cream products in bulk form;

(3) In any products classified pursuant to paragraphs (a) or (b) of this section that are destroyed or lost by a handler in a vehicular accident, flood, fire, or in a similar occurrence beyond the handler's control, to the extent that the quantities destroyed or lost can be verified from records satisfactory to the market administrator;

(4) In the skim milk equivalent of nonfat milk solids used to modify a fluid milk product that has not been accounted for in Class I; and

(5) In shrinkage assigned pursuant to § 1000.43(b).

(d) *Class IV milk* shall be all skim milk and butterfat:

(1) Used to produce:

(i) Butter; and

(ii) Any milk product in dried form; and

(2) In shrinkage assigned pursuant to § 1000.43(b).

§ 1000.41 [Reserved]

§ 1000.42 Classification of transfers and diversions.

(a) *Transfers and diversions to pool plants.* Skim milk or butterfat transferred or diverted in the form of a fluid milk product or transferred in the form of a bulk fluid cream product from a pool plant to another pool plant shall be classified as Class I milk unless the operators of both plants request the same classification in another class. In either case, the classification shall be subject to the following conditions:

(1) The skim milk and butterfat classified in each class shall be limited to the amount of skim milk and butterfat, respectively, remaining in such class at the receiving plant after the computations pursuant to § 1000.44(a)(9) and the corresponding step of § 1000.44(b);

(2) If the transferring plant received during the month other source milk to be allocated pursuant to § 1000.44(a)(3) or the corresponding step of § 1000.44(b), the skim milk or butterfat so transferred shall be classified so as to allocate the least possible Class I utilization to such other source milk; and

(3) If the transferring handler received during the month other source milk to be allocated pursuant to § 1000.44(a)(8) or (9) or the corresponding steps of § 1000.44(b), the skim milk or butterfat so transferred, up to the total of the skim milk and butterfat, respectively, in such receipts of other source milk, shall not be classified as Class I milk to a greater extent than would be the case if the other source milk had been received at the receiving plant.

(b) *Transfers and diversions to a plant regulated under another Federal order.* Skim milk or butterfat transferred or diverted in the form of a fluid milk product or transferred in the form of a bulk fluid cream product from a pool plant to a plant regulated under another Federal order shall be classified in the following manner. Such classification shall apply only to the skim milk or butterfat that is in excess of any receipts at the pool plant from a plant regulated under another Federal order of skim milk and butterfat, respectively, in fluid milk products and bulk fluid cream products, respectively, that are in the same category as described in paragraph (b)(1) or (2) of this section:

(1) As Class I milk, if transferred as packaged fluid milk products;

(2) If transferred or diverted in bulk form, classification shall be in the classes to which allocated under the other order:

(i) If the operators of both plants so request in their reports of receipts and utilization filed with their respective market administrators, transfers in bulk form shall be classified as other than Class I to the extent that such utilization is available for such classification pursuant to the allocation provisions of the other order;

(ii) If diverted, the diverting handler must request a classification other than Class I. If the plant receiving the diverted milk does not have sufficient utilization available for the requested classification and some of the diverted milk is consequently assigned to Class I use, the diverting handler shall be given the option of designating the entire load of diverted milk as producer milk at the plant physically receiving the milk. Alternatively, if the diverting handler so chooses, it may designate which dairy farmers whose milk was diverted during the month will be designated as producers under the order physically receiving the milk. If the diverting handler declines to accept either of these options, the market administrator will prorate the portion of diverted milk in excess of Class II, III, and IV use among all the dairy farmers whose milk was received from the diverting handler on the last day of the month, then the second-to-last day, and continuing in that fashion until the excess diverted milk has been assigned as producer milk under the receiving order; and

(iii) If information concerning the classes to which such transfers or diversions were allocated under the other order is not available to the market administrator for the purpose of establishing classification under this paragraph, classification shall be Class I, subject to adjustment when such information is available.

(c) *Transfers and diversions to producer-handlers and to exempt plants.* Skim milk or butterfat that is transferred or diverted from a pool plant to a producer-handler under any Federal order in 7 CFR, chapter X or to an exempt plant shall be classified:

(1) As Class I milk if transferred or diverted to a producer-handler;

(2) As Class I milk if transferred to an exempt plant in the form of a packaged fluid milk product; and

(3) In accordance with the utilization assigned to it by the market administrator if transferred or diverted in the form of a bulk fluid milk product or transferred in the form of a bulk fluid cream product to an exempt plant. For this purpose, the receiving handler's utilization of skim milk and butterfat in each class, in series beginning with Class IV, shall be assigned to the extent possible to its receipts of skim milk and butterfat, in bulk fluid cream products, and bulk fluid milk products, respectively, pro rata to each source.

(d) *Transfers and diversions to other nonpool plants.* Skim milk or butterfat transferred or diverted in the following forms from a pool plant to a nonpool plant that is not a plant regulated under another order in 7 CFR, chapter X, an exempt plant, or a producer-handler plant shall be classified:

(1) As Class I milk, if transferred in the form of a packaged fluid milk product; and

(2) As Class I milk, if transferred or diverted in the form of a bulk fluid milk product or transferred in the form of a bulk fluid cream product, unless the following conditions apply:

(i) If the conditions described in paragraphs (d)(2)(i)(A) and (B) of this section are met, transfers or diversions in bulk form shall be classified on the basis of the assignment of the nonpool plant's utilization, excluding the milk equivalent of both nonfat milk solids and concentrated milk used in the plant during the month, to its receipts as set forth in paragraphs (d)(2)(ii) through (viii) of this section:

(A) The transferring handler or diverting handler claims such classification in such handler's report of receipts and utilization filed pursuant to § ____.30 of each Federal milk order in 7 CFR, chapter X for the month within which such transaction occurred; and

(B) The nonpool plant operator maintains books and records showing the utilization of all skim milk and butterfat received at such plant which are made available for verification purposes if requested by the market administrator;

(ii) Route disposition in the marketing area of each Federal milk order in 7 CFR, chapter X from the nonpool plant and transfers of packaged fluid milk products from such nonpool plant to plants fully regulated thereunder shall be assigned to the extent possible in the following sequence:

(A) Pro rata to receipts of packaged fluid milk products at such nonpool plant from pool plants;

(B) Pro rata to any remaining unassigned receipts of packaged fluid milk products at such nonpool plant from plants regulated under other Federal orders in 7 CFR, chapter X;

(C) Pro rata to receipts of bulk fluid milk products at such nonpool plant from pool plants; and

(D) Pro rata to any remaining unassigned receipts of bulk fluid milk products at such nonpool plant from plants regulated under other Federal orders in 7 CFR, chapter X;

(iii) Any remaining Class I disposition of packaged fluid milk products from the nonpool plant shall be assigned to the extent possible pro rata to any remaining unassigned receipts of packaged fluid milk products at such nonpool plant from pool plants and plants regulated under other Federal orders in 7 CFR, chapter X;

(iv) Transfers of bulk fluid milk products from the nonpool plant to a plant regulated under any Federal order in 7 CFR, chapter X, to the extent that such transfers to the regulated plant exceed receipts of fluid milk products from such plant and are allocated to Class I at the receiving plant, shall be assigned to the extent possible in the following sequence:

(A) Pro rata to receipts of fluid milk products at such nonpool plant from pool plants; and

(B) Pro rata to any remaining unassigned receipts of fluid milk products at such nonpool plant from plants regulated under other Federal orders in 7 CFR, chapter X;

(v) Any remaining unassigned Class I disposition from the nonpool plant shall be assigned to the extent possible in the following sequence:

(A) To such nonpool plant's receipts from dairy farmers who the market administrator determines constitute regular sources of Grade A milk for such nonpool plant; and

(B) To such nonpool plant's receipts of Grade A milk from plants not fully regulated under any Federal order in 7 CFR, chapter X which the market administrator determines constitute regular sources of Grade A milk for such nonpool plant;

(vi) Any remaining unassigned receipts of bulk fluid milk products at the nonpool plant from pool plants and plants regulated under other Federal orders in 7 CFR, chapter X shall be assigned, pro rata among such plants, to the extent possible first to any remaining Class I utilization and then to all other utilization, in sequence beginning with Class IV at such nonpool plant;

(vii) Receipts of bulk fluid cream products at the nonpool plant from pool plants and plants regulated under other Federal orders in 7 CFR, chapter X shall be assigned, pro rata among such plants, to the extent possible to any remaining utilization, in sequence beginning with Class IV at such nonpool plant; and

(viii) In determining the nonpool plant's utilization for purposes of this paragraph, any fluid milk products and bulk fluid cream products transferred from such nonpool plant to a plant not fully regulated under any Federal order in 7 CFR, chapter X shall be classified on the basis of the second plant's utilization using the same assignment priorities at the second plant that are set forth in this paragraph.

§ 1000.43 General classification rules.

In determining the classification of producer milk pursuant to § 1000.44, the following rules shall apply:

(a) Each month the market administrator shall correct for mathematical and other obvious errors all reports filed pursuant to § ____.30 of each Federal milk order in 7 CFR, chapter X and shall compute separately for each pool plant, and for each cooperative association with respect to milk for which it is the handler pursuant to § 1000.9(c) the pounds of skim milk and butterfat, respectively, in each class in accordance with §§ 1000.40 and 1000.42, and paragraph (b) of this section.

(b) For purposes of classifying all milk reported by a handler pursuant to § ____.30 of each Federal milk order in 7 CFR, chapter X, the market administrator shall:

(1) Determine the shrinkage or overage of skim milk and butterfat for each pool plant and for each handler described in § 1000.9(c) by subtracting total utilization from total receipts. Any positive difference would be shrinkage, and any negative difference would be overage;

(2) Prorate the shrinkage or overage computed in paragraph (b)(1) of this section to the respective quantities of skim milk and butterfat reported in each class. In the case of a handler described in § 1000.9(c), the proration of shrinkage shall be based upon the utilization of the plants to which the milk was delivered; and

(3) Add the prorated shrinkage to, or subtract the prorated overage from, the handler's reported utilization. The results shall be known as the gross utilization in each class.

(c) If any of the water contained in the milk from which a product is made is removed before the product is utilized or disposed of by the handler, the pounds of skim milk in such product that are to be considered under this part as used or disposed of by the handler shall be an amount equivalent to the nonfat milk solids contained in such product plus all of the water originally associated with such solids.

(d) Skim milk and butterfat contained in receipts of bulk concentrated fluid milk and nonfluid milk products that are reconstituted for fluid use shall be assigned to Class I use, up to the reconstituted portion of labeled reconstituted fluid milk products, on a pro rata basis (except for any Class I use

VOL
63
ISS
20
JA
30
1998
UMI

of specific concentrated receipts that is established by the handler) prior to any assignments under § 1000.44. Any remaining skim milk and butterfat in concentrated receipts shall be assigned to uses under § 1000.44 on a pro rata basis, unless a specific use of such receipts is established by the handler.

§ 1000.44 Classification of producer milk.

For each month the market administrator shall determine for each handler described in § 1000.9(a) for each pool plant of the handler separately and for each handler described in § 1000.9(c) the classification of producer milk by allocating the handler's receipts of skim milk and butterfat to the gross utilization of such receipts pursuant to § 1000.43(b)(3) by such handler as follows:

(a) Skim milk shall be allocated in the following manner:

(1) Subtract from the pounds of skim milk in Class I the pounds of skim milk in:

(i) Receipts of packaged fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk disposed of to such plant by handlers fully regulated under any Federal order in 7 CFR, chapter X is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order in 7 CFR, chapter X;

(ii) Packaged fluid milk products in inventory at the beginning of the month. This paragraph shall apply only if the pool plant was subject to the provisions of this paragraph or comparable provisions of another Federal order in 7 CFR, chapter X in the immediately preceding month;

(iii) Fluid milk products received in packaged form from plants regulated under other Federal orders in 7 CFR, chapter X;

(iv) Any remaining receipts of skim milk shall be allocated pursuant to paragraph (a)(3)(iv) of this section.

(2) Subtract from the pounds of skim milk in Class II the pounds of skim milk in the receipts of skim milk in bulk concentrated fluid milk products and in other source milk (except other source milk received in the form of an unconcentrated fluid milk product or a fluid cream product) that is used to produce, or added to, any product in Class II (excluding the quantity of such skim milk that was classified as Class III milk pursuant to § 1000.40(c)(4)). Any remaining receipts of skim milk shall be allocated pursuant to paragraph (a)(3)(iv) of this section.

(3) Subtract from the pounds of skim milk remaining in each class, in series beginning with Class IV, the pounds of skim milk in:

(i) Receipts of bulk concentrated fluid milk products and other source milk (except other source milk received in the form of an unconcentrated fluid milk product);

(ii) Receipts of fluid milk products and bulk fluid cream products for which appropriate health approval is not established and from unidentified sources;

(iii) Receipts of fluid milk products and bulk fluid cream products from an exempt plant;

(iv) Fluid milk products and bulk fluid cream products received, or acquired for distribution, from a producer-handler as defined under this order or any other Federal order in 7 CFR, chapter X; and

(v) Any receipts not subtracted pursuant to paragraphs (a)(1) and (a)(2) of this section.

(4) Subtract from the pounds of skim milk remaining in all classes other than Class I, in sequence beginning with Class IV, the receipts of fluid milk products from an unregulated supply plant that were not previously subtracted in this section for which the handler requests classification other than Class I, but not in excess of the pounds of skim milk remaining in these other classes combined.

(5) Subtract from the pounds of skim milk remaining in all classes other than Class I, in sequence beginning with Class IV, receipts of fluid milk products from an unregulated supply plant that were not subtracted in previous paragraphs, and which are in excess of the pounds of skim milk determined pursuant to paragraphs (a)(5)(i) through (iii) of this section;

(i) Multiply by 1.25 the pounds of skim milk remaining in Class I at this allocation step;

(ii) Subtract from the above result the pounds of skim milk in receipts of producer milk and fluid milk products from pool plants of other handlers; and

(iii) Multiply any plus quantity resulting above by the percentage that the receipts of skim milk in fluid milk products from unregulated supply plants remaining at this pool plant is of all such receipts remaining pursuant to this allocation step.

(6) Subtract from the pounds of skim milk remaining in all classes other than Class I, in sequence beginning with Class IV, the pounds of skim milk in receipts of bulk fluid milk products from a handler regulated under another Federal order in 7 CFR, chapter X that are in excess of bulk fluid milk products transferred or diverted to such handler, if other than Class I classification is requested, but not in excess of the pounds of skim milk remaining in these classes combined.

(7) Subtract from the pounds of skim milk remaining in each class, in series beginning with Class III (or Class IV if the plant had only Class IV utilization), the pounds of skim milk in fluid milk products and bulk fluid cream products in inventory at the beginning of the month that were not previously subtracted in this section.

(8) Subtract from the pounds of skim milk remaining in each class at the plant, pro rata to the total pounds of skim milk remaining in Class I and in all other classes combined, and in sequence beginning with Class IV, the pounds of skim milk in receipts of fluid milk products from an unregulated supply plant that were not previously subtracted in this section and that were not offset by transfers or diversions of fluid milk products to the unregulated supply plant from which fluid milk products to be allocated at this step were received.

(9) Subtract in the manner specified below from the pounds of skim milk remaining in each class the pounds of skim milk in receipts of bulk fluid milk products from a handler regulated under another Federal order in 7 CFR, chapter X that are in excess of bulk fluid milk products transferred or diverted to such handler that were not subtracted in paragraph (a)(6) of this section;

(i) Such subtraction shall be pro rata to the pounds of skim milk in Class I and in all other classes combined, with the quantity prorated to all classes combined being subtracted in sequence beginning with Class IV, with respect to whichever of the following quantities represents the lower proportion of Class I milk:

(A) The estimated utilization of skim milk of all handlers in each class as announced for the month pursuant to § 1000.45(a); or

(B) The total pounds of skim milk remaining in each class at this allocation step.

(ii) [Reserved]

(10) Subtract from the pounds of skim milk remaining in each class the pounds of skim milk in receipts of fluid milk products and bulk fluid cream products from another pool plant according to the classification of such products pursuant to § 1000.42(a).

(b) Butterfat shall be allocated in accordance with the procedure outlined for skim milk in paragraph (a) of this section; and

(c) The quantity of producer milk in each class shall be the combined pounds of skim milk and butterfat remaining in each class after the computations pursuant to paragraphs (a) and (b) of this section.

§ 1000.45 Market administrator's reports and announcements concerning classification.

(a) Whenever required for the purpose of allocating receipts from other Federal order plants pursuant to § 1000.44(a)(9) and the corresponding step of § 1000.44(b), the market administrator shall estimate and publicly announce the utilization (to the nearest whole percentage) in Class I during the month of skim milk and butterfat, respectively, in producer milk of all handlers. The estimate shall be based upon the most current available data and shall be final for such purpose.

(b) The market administrator shall report to the other Federal order market administrators, as soon as possible after the handlers' reports of receipts and utilization are received, the class to which receipts from other Federal order plants are allocated pursuant to §§ 1000.43(d) and 1000.44 (including any reclassification of inventories of bulk concentrated fluid milk products), and thereafter any change in allocation required to correct errors disclosed on the verification of such report.

(c) The market administrator shall furnish each handler operating a pool plant who has shipped fluid milk products or bulk fluid cream products to a plant fully regulated under another Federal order in 7 CFR, chapter X the class to which the shipments were allocated by the market administrator of the other Federal order in 7 CFR, chapter X on the basis of the report by the receiving handler and, as necessary, any changes in the allocation arising from the verification of such report.

(d) The market administrator shall report to each cooperative association which so requests, the percentage of producer milk delivered by members of the association that was used in each class by each handler receiving the milk. For the purpose of this report, the milk so received shall be prorated to each class in accordance with the total utilization of producer milk by the handler.

Subpart G—Class Prices

§ 1000.50 Class prices and component prices.

Subject to the provisions of § 1000.52, the class prices per hundredweight of milk containing 3.5 percent butterfat and the component prices for the month shall be as follows:

(a) *Class I price.* The Class I price shall be .965 times the Class I skim milk price plus 3.5 times the Class I butterfat price.

(b) *Class II price.* The Class II price shall be .965 times the Class II skim milk price plus 3.5 times the month's butterfat price.

(c) *Class III price.* The Class III price shall be .965 times the Class III skim milk price plus 3.5 times the month's butterfat price.

(d) *Class IV price.* The Class IV price shall be .965 times the Class IV skim milk price plus 3.5 times the month's butterfat price.

(e) *Class I differential price.* The Class I differential price shall be the difference between the current month's Class I and Class III prices (this price may be negative).

(f) *Class II differential price.* The Class II differential price shall be the difference between the current month's Class II and Class IV prices.

(g) *Class I skim milk price.* The Class I skim milk price per hundredweight, rounded to the nearest cent, shall be the adjusted Class I differential effective at the location of the plant as specified in § 1000.52(a) plus a six month declining average computed by totaling the value of the higher of Class III or Class IV skim milk price for each month, starting with the second preceding month, multiplied by a factor of six and reducing the factor by one for each preceding month and dividing the sum by 21.

(h) *Class II skim milk price.* The Class II skim milk price per hundredweight shall be the Class IV skim milk price for the month plus 70 cents.

(i) *Class III skim milk price.* The Class III skim milk price per hundredweight, rounded to the nearest cent, shall be the protein price per pound times 3.3 pounds of protein plus the other solids price per pound times 5.7 pounds of other solids;

(j) *Class IV skim milk price.* The Class IV skim milk price per hundredweight, rounded to the nearest cent, shall be the nonfat solids price per pound times 9 pounds of nonfat solids.

(k) *Class I butterfat price.* The Class I butterfat price per pound, rounded to the nearest one-hundredth cent, shall be the adjusted Class I differential effective at the location of the plant as specified in § 1000.52(a) divided by 100, plus a six month declining average computed by totaling the value of the butterfat price for each month, starting with the second preceding month, multiplied by a factor of six and reducing the factor by one for each preceding month and dividing the sum by 21.

(l) *Butterfat price.* The butterfat price per pound, rounded to the nearest one-hundredth cent, shall be the National Agricultural Statistical Service (NASS) AA Butter survey price as reported by the Department less .079 (make allowance), with the result divided by 0.82.

(m) *Nonfat solids price.* The nonfat solids price per pound, rounded to the nearest one-hundredth cent, shall be the NASS nonfat dry milk survey price as reported by the Department less $0.125 (make allowance), with the result divided by 0.96.

(n) *Protein price.* The protein price per pound, rounded to the nearest one-hundredth cent shall be the total of:

(1) The NASS 40-lb block cheese survey price as reported by the Department less 12.7 cents, with the result multiplied by 1.32; and

(2) Multiply by 1.20 an amount computed as follows: The NASS 40-lb block cheese survey price as reported by the Department less 12.7 cents, with the result multiplied by 1.582 then reduced by the butterfat price.

(o) *Other solids price.* The other solids price per pound, rounded to the nearest one-hundredth cent, shall be the NASS dry whey survey price as reported by the Department minus 10 cents, with the result divided by 0.968.

(p) *Somatic cell adjustment.* (1) The somatic cell adjustment rate, per 1,000 somatic cells, rounded to five decimal places, shall be computed by multiplying .0005 times the monthly NASS 40-pound block cheese survey price;

(2) The somatic cell adjustment, per hundredweight, shall be determined by subtracting from 350 the somatic cell count (in thousands) of the milk, multiplying the difference by the somatic cell adjustment rate, and rounding to the nearest full cent.

§ 1000.51 [Reserved]

§ 1000.52 Adjusted Class I differentials.

The Class I differential adjusted for location to be used in § 1000.50(g) and (k) shall be as follows, except that:

(1) Under the Option 1B Revenue-Enhancement Phase-In, the differential shall be increased by $1.10 in 1999, $.70 in 2000, $.40 in 2001, and $.20 in 2002; and

(2) Under the Option 1B Revenue Neutral Phase-In, the differential shall be increased by $.55 in 1999, $.35 in 2000, $.20 in 2001, and $.10 in 2002:

§ 1000.53 Announcement of class prices and component prices.

On or before the 5th day of the month, the market administrator shall announce for each Federal milk marketing order in 7 CFR, chapter X the following applicable prices:

(a) For the following month:
(1) The Class I price;
(2) The Class I skim milk price;
(3) The Class I butterfat price;
(b) For the preceding month:
(1) The Class II price;
(2) The Class III price;
(3) The Class IV price;
(4) The Class II skim milk price;
(5) The Class III skim milk price;
(6) The Class IV skim milk price;
(7) The butterfat price;
(8) The nonfat solids price;
(9) The protein price;
(10) The other solids price; and
(11) The somatic cell adjustment rate.

§ 1000.54 Equivalent price.

If for any reason a price or pricing constituent required for computing class prices or for other purposes is not available as prescribed in any Federal milk order, the market administrator shall use a price or pricing constituent determined by the Deputy Administrator, Dairy Programs, Agricultural Marketing Service, to be equivalent to the price or pricing constituent that is required.

Subpart H—Payments for Milk

§ 1000.70 Producer-settlement fund.

The market administrator shall establish and maintain a separate fund known as the producer-settlement fund into which the market administrator shall deposit all payments made by handlers pursuant to §§ ____.71, ____.76, and ____.77 of each Federal milk order in 7 CFR, chapter X, and out of which the market administrator shall make all payments pursuant to §§ ____.72 and ____.77 of each Federal milk order in 7 CFR, chapter X. Payments due any handler shall be offset by any payments due from that handler.

§ 1000.71 Payments to the producer-settlement fund.

Each handler shall make a payment to the producer-settlement fund in a manner that provides receipt of the funds by the market administrator no later than the date specified in § ____.71 of each order in 7 CFR, chapter X. Payment shall be the amount, if any, by which the amount specified in (a) of this section exceeds the amount specified in (b) or (c) of this section:

(a) The total value of milk of the handler for the month as determined pursuant to § ____.60 of the order; and

(b) For orders in 7 CFR, chapter X with component pricing, the sum of:

(1) An amount obtained by multiplying the total hundredweight of producer milk as determined pursuant to § 1000.44(c) by the producer price differential, adjusted pursuant to § ____.75 of the order;

(2) An amount obtained by multiplying the pounds of protein, other solids, and butterfat contained in producer milk by the protein, other solids, and butterfat prices, respectively;

(3) The total value of the somatic cell adjustment to producer milk; and

(4) An amount obtained by multiplying the pounds of skim milk and butterfat for which a value was computed pursuant to § ____.60(i) of the order by the producer price differential as adjusted pursuant to § ____.75 of the order for the location of the plant from which received; or

(c) For orders in 7 CFR, chapter X with skim milk and butterfat pricing, the sum of the value at the uniform prices for skim milk and butterfat, adjusted for plant location, of the handler's receipts of producer milk; and the value at the uniform price as adjusted pursuant to § ____.75 of the order applicable at the location of the plant from which received of other source milk for which a value is computed pursuant to § ____.60(e) of the order.

§ 1000.72 Payments from the producer-settlement fund.

No later than one day after the date of payment receipt required under § 1000.71, the market administrator shall pay to each handler the amount, if any, by which the amount computed pursuant to § 1000.71(b) or (c), as the case may be, exceeds the amount computed pursuant to § 1000.71(a). If, at such time, the balance in the producer-settlement fund is insufficient to make all payments pursuant to this section, the market administrator shall reduce uniformly such payments and shall complete the payments as soon as the funds are available.

§ 1000.76 Payments by a handler operating a partially regulated distributing plant.

On or before the 25th day after the end of the month, the operator of a partially regulated distributing plant shall pay to the market administrator for the producer-settlement fund the amount computed pursuant to paragraph (a) of this section or, if the handler submits the information specified in §§ ____.30(b) and ____.31(b) of the order, the handler may elect to pay the amount computed pursuant to paragraph (b) of this section:

(a) The payment under this paragraph shall be an amount resulting from the following computations:

(1) From the plant's route disposition in the marketing area:

(i) Subtract receipts of fluid milk products classified as Class I milk from pool plants and plants fully regulated under other Federal orders in 7 CFR, chapter X, except that subtracted under a similar provision of another Federal milk order in 7 CFR, chapter X;

(ii) Subtract receipts of fluid milk products from another nonpool plant that is not a plant fully regulated under another Federal order in 7 CFR, chapter X to the extent that an equivalent amount of fluid milk products disposed of to the nonpool plant by handlers fully regulated under any Federal order in 7 CFR, chapter X is classified and priced as Class I milk and is not used as an offset for any payment obligation under any order; and

(iii) Subtract the pounds of reconstituted milk made from nonfluid milk products which are then disposed of as route disposition in the marketing area;

(2) For orders in 7 CFR, chapter X with multiple component pricing, multiply the remaining pounds by the amount by which the Class I differential price exceeds the producer price differential, both prices to be applicable at the location of the partially regulated distributing plant except that neither the adjusted Class I differential price nor the adjusted producer price differential shall be less than zero;

(3) For orders in 7 CFR, chapter X with skim milk and butterfat pricing, multiply the remaining pounds by the amount by which the Class I price exceeds the uniform price, both prices to be applicable at the location of the partially regulated distributing plant except that neither the adjusted Class I price nor the adjusted uniform price differential shall be less than the lowest announced class price; and

(4) Add the amount obtained from multiplying the pounds of labeled reconstituted milk included in paragraph (a)(1)(iii) of this section by any positive difference between the Class I price applicable at the location of the partially regulated distributing plant less $1.00 and the Class IV price. For any reconstituted milk that is not so labeled, the Class I price shall not be reduced by $1.00. Alternatively, for such disposition, payments may be made to the producer-settlement fund of the order regulating the producer milk used to produce the nonfluid milk ingredients at the positive difference between the Class I price applicable under the other Federal order in 7 CFR, chapter X at the location of the plant where the nonfluid milk ingredients were processed and the Class IV price. This payment option shall apply only if a majority of the total milk received at the plant that processed the nonfluid milk ingredients is regulated under one or more Federal orders in 7 CFR, chapter X and payment may only be made to the producer-settlement fund of the order pricing a plurality of the milk used to produce the nonfluid milk ingredients. This payment option shall not apply if the source of the nonfluid ingredients used in reconstituted fluid milk products cannot be determined by the market administrator.

(b) The payment under this paragraph shall be the amount resulting from the following computations:

(1) Determine the value that would have been computed pursuant to § ____.60 of the order for the partially regulated distributing plant if the plant had been a pool plant, subject to the following modifications:

(i) Fluid milk products and bulk fluid cream products received at the plant from a pool plant or a plant fully regulated under another Federal order plant shall be allocated at the partially regulated distributing plant to the same class in which such products were classified at the fully regulated plant;

(ii) Fluid milk products and bulk fluid cream products transferred from the partially regulated distributing plant to a pool plant or a plant fully regulated under another Federal order in 7 CFR, chapter X shall be classified at the partially regulated distributing plant in the class to which allocated at the fully regulated plant. Such transfers shall be computed to the extent possible to those receipts at the partially regulated distributing plant from the pool plant and plants fully regulated under other Federal orders in 7 CFR, chapter X that are classified in the corresponding class pursuant to paragraph (b)(1)(i) of this section. Any such transfers remaining after the above allocation which are in Class I and for which a value is computed pursuant to § ____.60 of the order for the partially regulated distributing plant shall be priced at the statistical uniform price or uniform price, whichever is applicable, of the respective order regulating the handling of milk at the receiving plant, with such statistical uniform price or uniform price adjusted to the location of the nonpool plant (but not to be less than the lowest announced class price of the respective order); and

(iii) If the operator of the partially regulated distributing plant so requests, the handler's value of milk determined pursuant to § ____.60 of the order shall include a value of milk determined for each nonpool plant that is not a plant fully regulated under another Federal order in 7 CFR, chapter X which serves as a supply plant for the partially regulated distributing plant by making shipments to the partially regulated distributing plant during the month equivalent to the requirements of Section 7(c) of the order, subject to the following conditions:

(A) The operator of the partially regulated distributing plant submits with its reports filed pursuant to §§ ____.30(b) and ____.31(b) of the order similar reports for each such nonpool supply plant;

(B) The operator of the nonpool plant maintains books and records showing the utilization of all skim milk and butterfat received at the plant which are made available if requested by the market administrator for verification purposes; and

(C) The value of milk determined pursuant to § ____.60 for the

VOL 63 ISS 20 JA 30 1998 UMI

unregulated supply plant shall be determined in the same manner prescribed for computing the obligation of the partially regulated distributing plant; and

(2) From the partially regulated distributing plant's value of milk computed pursuant to paragraph (b)(1) of this section, subtract:

(i) The gross payments by the operator of the partially regulated distributing plant for milk received at the plant during the month that would have been producer milk had the plant been fully regulated;

(ii) If paragraph (b)(1)(iii) of this section applies, the gross payments by the operator of such nonpool supply plant for milk received at the plant during the month that would have been producer milk if the plant had been fully regulated; and

(iii) The payments by the operator of the partially regulated distributing plant to the producer-settlement fund of another Federal order in 7 CFR, chapter X under which the plant is also a partially regulated distributing plant and like payments by the operator of the nonpool supply plant if paragraph (b)(1)(iii) of this section applies.

(c) Any handler may elect partially regulated distributing plant status for any plant with respect to receipts of nonfluid milk ingredients assigned to Class I use under § 1000.43(d). Payments may be made to the producer-settlement fund of the order regulating the producer milk used to produce the nonfluid milk ingredients at the positive difference between the Class I price applicable under the other order at the location of the plant where the nonfluid milk ingredients were processed and the Class IV price. This payment option shall apply only if a majority of the total milk received at the plant that processed the nonfluid milk ingredients is regulated under one or more Federal orders in 7 CFR, chapter X and payment may only be made to the producer-settlement fund of the order pricing a plurality of the milk used to produce the nonfluid milk ingredients. This payment option shall not apply if the source of the nonfluid ingredients used in reconstituted fluid milk products cannot be determined by the market administrator.

§ 1000.77 Adjustment of accounts.

Whenever audit by the market administrator of any handler's reports, books, records, or accounts, or other verification discloses errors resulting in money due the market administrator from a handler, or due a handler from the market administrator, or due a producer or cooperative association from a handler, the market administrator shall promptly notify such handler of any amount so due and payment thereof shall be made on or before the next date for making payments as set forth in the provisions under which the error(s) occurred.

§ 1000.78 Charges on overdue accounts.

Any unpaid obligation due the market administrator, producers, or cooperative associations from a handler pursuant to the provisions of the order shall be increased 1.0 percent each month beginning with the day following the date such obligation was due under the order. Any remaining amount due shall be increased at the same rate on the corresponding day of each succeeding month until paid. The amounts payable pursuant to this section shall be computed monthly on each unpaid obligation and shall include any unpaid charges previously computed pursuant to this section. The late charges shall accrue to the administrative assessment fund. For the purpose of this section, any obligation that was determined at a date later than prescribed by the order because of a handler's failure to submit a report to the market administrator when due shall be considered to have been payable by the date it would have been due if the report had been filed when due.

Subpart I—Administrative Assessment and Marketing Service Deduction

§ 1000.85 Assessment for order administration.

On or before the payment receipt date specified under § ____.71 of each Federal milk order in 7 CFR, chapter X, each handler shall pay to the market administrator its pro rata share of the expense of administration of the order at a rate specified by the market administrator that is no more than 5 cents per hundredweight with respect to:

(a) Receipts of producer milk (including the handler's own production) other than such receipts by a handler described in § 1000.9(c) that were delivered to pool plants of other handlers;

(b) Receipts from a handler described in § 1000.9(c);

(c) Receipts of concentrated fluid milk products from unregulated supply plants and receipts of nonfluid milk products assigned to Class I use pursuant to § 1000.43(d) and other source milk allocated to Class I pursuant to § 1000.44(a)(3) and (8) and the corresponding steps of § 1000.44(b), except other source milk that is excluded from the computations pursuant to § ____.60(d) and (e) of Parts 1005, 1006, and 1007 or § ____.60(h) and (i) of Parts 1001, 1030, 1032, 1033, 1124, 1126, 1131, and 1134 in 7 CFR, chapter X; and

(d) Route disposition in the marketing area from a partially regulated distributing plant that exceeds the skim milk and butterfat subtracted pursuant to § 1000.76(a)(1)(i)and (ii).

§ 1000.86 Deduction for marketing services.

(a) Except as provided in paragraph (b) of this section, each handler in making payments to producers for milk (other than milk of such handler's own production) pursuant to § ____.73 of each Federal milk order in 7 CFR, chapter X, shall deduct an amount specified by the market administrator that is no more than 7 cents per hundredweight and shall pay the amount deducted to the market administrator not later than the payment receipt date specified under § ____.71 of each Federal milk order in 7 CFR, chapter X. The money shall be used by the market administrator to verify or establish weights, samples and tests of producer milk and provide market information for producers who are not receiving such services from a cooperative association. The services shall be performed in whole or in part by the market administrator or an agent engaged by and responsible to the market administrator;

(b) In the case of producers for whom the market administrator has determined that a cooperative association is actually performing the services set forth in paragraph (a) of this section, each handler shall make deductions from the payments to be made to producers as may be authorized by the membership agreement or marketing contract between the cooperative association and the producers. On or before the 15th day after the end of the month, such deductions shall be paid to the cooperative association rendering the services accompanied by a statement showing the amount of any deductions and the amount of milk for which the deduction was computed for each producer. These deductions shall be made in lieu of the deduction specified in paragraph (a) of this section.

Subpart J—Miscellaneous Provisions

§ 1000.90 Dates.

If a date required for a report, payment, or announcement contained in a Federal milk order in 7 CFR, chapter X falls on a Saturday, Sunday, or national holiday, such report, payment, or announcement will be on the next day that the market administrator's office is open for public business.

§§ 1000.91—1000.92 [Reserved]

§ 1000.93 OMB control number assigned pursuant to the Paperwork Reduction Act.

The information collection requirements contained in this regulation have been approved by the Office of Management and Budget (OMB) under the provisions of Title 44 U.S.C. chapter 35 and have been assigned OMB control number 0581–0032.

Subpart—Order Regulating Handling

General Provisions

§ 1001.1 General provisions.

The terms, definitions, and provisions in part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1001.2 Northeast marketing area.

The marketing area means all the territory within the bounds of the following states and political subdivisions, including all piers, docks and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State or Federal) reservations, installations, institutions, or other similar establishments if any part thereof is within any of the listed states or political subdivisions:

Connecticut, Delaware, Massachusetts, New Hampshire, New Jersey, Rhode Island, Vermont and District of Columbia

All of the States of Connecticut, Delaware, Massachusetts, New Hampshire, New Jersey, Rhode Island, Vermont and the District of Columbia.

Maryland Counties and City

All of the State of Maryland except the counties of Allegany and Garrett.

New York Counties and Cities

All counties within the State of New York except Chautauqua, Allegany (except the township Hume) and Cattaraugus (except the township Yorkshire).

Pennsylvania Counties

Adams, Bucks, Chester, Cumberland, Dauphin, Delaware, Franklin, Fulton, Juniata, Lancaster, Lebanon, Montgomery, Perry, Philadelphia, and York.

Virginia Counties and Cities

Counties of Arlington, Fairfax, Loudoun, and Prince William, and cities of Alexandria, Fairfax, Falls Church, Manassas, and Manassas Park.

§ 1001.3 Route disposition.

See § 1000.3 of this chapter.

§ 1001.4 Plant.

(a) Except as provided in paragraph (b) of this section, plant means the land, buildings, facilities, and equipment constituting a single operating unit or establishment at which milk or milk products are received, processed, or packaged, including a facility described in paragraph (b)(2) of this section if the facility receives the milk of more than one dairy farmer.

(b) Plant shall not include:

(1) A separate building without stationary storage tanks that is used only as a reload point for transferring bulk milk from one tank truck to another or a separate building used only as a distribution point for storing packaged fluid milk products in transit for route disposition; or

(2) An on-farm facility operated as part of a single dairy farm entity for the separation of cream and skim milk; or

(3) Bulk reload points where milk is transferred from one tank truck to another while en route from a dairy farmer's farms to a plant. If stationary storage tanks are used for transferring milk at the premises, the operator of the facility shall make an advance written request to the market administrator that the facility shall be treated as a reload point. The cooling of milk, collection of samples, and washing and sanitizing of tank trucks at the premises shall not disqualify it as a bulk reload point.

§ 1001.5 Distributing plant.

See § 1000.5 of this chapter.

§ 1001.6 Supply plant.

See § 1000.6 of this chapter.

§ 1001.7 Pool plant.

Pool plant means a plant, unit of plants, or a system of plants as specified in paragraphs (a) through (f) of this section. The pooling standards described in paragraphs (c) and (f) of this section are subject to modification pursuant to paragraph (g) of this section:

(a) A distributing plant from which during the month total route disposition is equal to 25 percent or more of the total quantity of bulk fluid milk products physically received at the plant; and route disposition in the marketing area is at least 25 percent of total route disposition. For purposes of this section, packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant,

VOL 63 ISS 20 JA 30 1998 UMI

for the single purpose of qualifying the transferring plant as a pool distributing plant.

(b) A distributing plant located in the marketing area at which the majority of milk received is processed into aseptically packaged fluid milk products unless there are no sales from the plant into any marketing area and the plant operator in writing requests nonpool plant status for the plant for the month.

(c) A supply plant from which fluid milk products are transferred or diverted to plants described in paragraph (a) or (b) of this section subject to the following additional conditions:

(1) During the months of August through December, such shipments must equal not less than 10 percent of the total quantity of bulk milk that is physically received at the plant during the month;

(2) During the months of September through November, such shipments must equal not less than 20 percent of the total quantity of bulk milk that is physically received at the plant during the month;

(3) A plant which meets the shipping requirements of this paragraph during each of the months of August through December shall be a pool plant during the following months of January through July unless the milk received at the plant fails to meet the requirements of a duly constituted regulatory agency, the plant fails to meet a shipping requirement instituted pursuant to paragraph (f) of this section, or the plant operator requests nonpool status for the plant. The shipping requirement for any plant which has not met the requirements of paragraphs (c)(1) and (c)(2) of this section must equal not less than 10 percent of the total quantity of bulk milk that is physically received at the plant during each of the months of January through July in order for the plant to be a pool plant in each of those months; and

(4) If milk is delivered directly from producers' farms that are located outside of the states included in the marketing area or outside Maine or West Virginia, such producers must be grouped by state into units and each such unit must independently meet the shipping requirements of this paragraph.

(d) [Reserved]

(e) Two or more plants operated by the same handler and located in the marketing area qualified for pool status as a unit by meeting the total and in-area route distribution requirements specified in paragraph (a) of this section and subject to the following additional requirements:

(1) At least one of the plants in the unit qualifies as a pool plant pursuant to paragraph (a) of this section;

(2) Other plants in the unit must process only Class I or Class II products and must be located in a pricing zone providing the same or a lower Class I price than the price applicable at the distributing plant included in the unit; and

(3) A written request to form a unit, or to add or remove plants from a unit, or to cancel a unit, must be filed with the market administrator prior to the first day of the month for which unit formation it is to be effective.

(f) Two or more supply plants operated by the same handler, or by one or more cooperative associations, qualified for pooling as a system of supply plants by meeting the applicable percentage requirements of paragraph (c) of this section in the same manner as a single plant and subject to the following additional requirements:

(1) A written notification to the market administrator listing the plants to be included in the system prior to the first day of August that a system of supply plants will be effective for the period of September 1 through August 31 of the following year. The listed plants included in the system shall also be in the sequence in which they shall qualify for pool plant status based on the minimum deliveries required. If the deliveries made are insufficient to qualify the entire system for pooling, the last listed plant shall be excluded from the system, followed by the plant next-to-last on the list, and continuing in this sequence until remaining listed plants have met the minimum shipping requirements; and

(2) Each plant that qualifies as a pool plant within a system shall continue each month as a plant in the system through the following August unless the plant subsequently fails to qualify for pooling, the handler submits a written notification to the market administrator prior to the first day of the month that the plant be deleted from the system, or that the system be discontinued. Any plant that has been so deleted from the system, or that has failed to qualify as a pool plant in any month, will not be part of the system for the remaining months through August. No plant may be added in any subsequent month through the following August to a system that qualifies in September.

(g) The applicable shipping percentages of paragraphs (c) and (f) of this section may be increased or decreased by the market administrator if the market administrator finds that such adjustment is necessary to encourage needed shipments or to prevent uneconomic shipments. Before making such a finding, the market administrator shall investigate the need for adjustment either on the market administrator's own initiative or at the request of interested parties. If the investigation shows that an adjustment of the shipping percentages might be appropriate, the market administrator shall issue a notice stating that an adjustment is being considered and invite data, views and arguments. If the market administrator determines that an adjustment to the shipping percentages is necessary, the market administrator shall notify the industry within one day of the effective date of such adjustment.

(h) The term pool plant shall not apply to the following plants:

(1) A producer-handler plant;

(2) An exempt plant as defined in § 1000.8(e);

(3) A plant qualified pursuant to paragraph (a) of this section that is located within the marketing area if the plant also meets the pooling requirements of another Federal order and more than 50 percent of its route distribution has been in such other Federal order marketing area for three consecutive months;

(4) A plant qualified pursuant to paragraph (a) of this section which is not located within any Federal order marketing area that meets the pooling requirements of another Federal order and has had greater sales in such other Federal order's marketing area for 3 consecutive months;

(5) A plant qualified pursuant to paragraph (a) of this section that is located in another Federal order marketing area if the plant meets the pooling requirements of such other Federal order and does not have a majority of its route distribution in this marketing area for 3 consecutive months or if the plant is required to be regulated under such other Federal order without regard to its route disposition in any other Federal order marketing area;

(6) A plant qualified pursuant to paragraph (c) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under the other Federal order than are made to plants regulated under this order, or the plant has automatic pooling status under the other Federal order; and

(7) That portion of a pool plant designated as a "nonpool plant" that is physically separate and operated separately from the pool portion of such plant. The designation of a portion of a regulated plant as a nonpool plant must be requested in writing by the handler and must be approved by the market administrator.

§ 1001.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1001.9 Handler.

See § 1000.9 of this chapter.

§ 1001.10 Producer-handler.

Except as provided in paragraph (g) of this section, *producer-handler* means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds during the month;

(b) Receives no fluid milk products from sources other than own farm production, pool handlers, and plants fully regulated under another Federal order.

(c) Receives at its plant or acquires for route disposition no more than 150,000 pounds of fluid milk products from handlers fully regulated under any Federal order. This limitation shall not apply if the producer-handler's own farm production is less than 150,000 pounds during the month.

(d) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own-farm production or pool handlers;

(e) Disposes of no fluid milk products using the distribution system of another handler except for direct deliveries to retail outlets or to a pool handler's plant;

(f) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled (excluding receipts from handlers fully regulated under any Federal order) and the processing, packaging, and distribution operations are the producer-handler's own enterprise and at its own risk; and

(g) Producer-handler shall not include any producer who also operates a distributing plant if the producer-handler so requests that the two be operated as separate entities with the distributing plant regulated under § 1001.7(a) and the farm operated as a producer under § 1001.12.

§ 1001.11 [Reserved]

§ 1001.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk (or components of milk) is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1001.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1001.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I;

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order; and

(5) For any month of December through June, any dairy farmer whose milk is received at a pool plant or by a cooperative association handler described in § 1000.9(c) if the pool plant operator or the cooperative association caused milk from the same farm to be delivered to any plant as other than producer milk, as defined under this order or any other Federal milk order, during the same month, either of the 2 preceding months, or during any of the preceding months of July through November; and

(6) For any month of July through November, any dairy farmer whose milk is received at a pool plant or by a cooperative association handler described in § 1000.9(c) if the pool plant operator or the cooperative association caused milk from the same farm to be delivered to any plant as other than producer milk, as defined under this order or any other Federal milk order, during the same month.

§ 1001.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk) and butterfat contained in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or from a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of a pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it is picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants subject to the following conditions:

(1) The producers whose farms are outside of the states included in the marketing area or outside of Maine or West Virginia shall be organized into state units and each such unit shall be reported separately; and

(2) For pooling purposes, each state unit so reported must satisfy the shipping standards specified for a supply plant pursuant to § 1001.7(c);

(c) Diverted by a proprietary pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or by a handler described in § 1000.9(c) to a nonpool plant, subject to the following conditions:

(1) Milk of a dairy farmer shall not be eligible for diversion unless milk of such dairy farmer was physically received as producer milk at a pool plant and the dairy farmer has continuously retained producer status since that time. If a dairy farmer loses producer status under this order (except as a result of a temporary loss of Grade A approval), the dairy farmer's milk shall not be eligible for diversion until milk of the dairy farmer has been physically received as producer milk at a pool plant;

(2) [Reserved]

(3) Diverted milk shall be priced at the location of the plant to which diverted; and

(4) [Reserved]

§ 1001.14 Other source milk.

See § 1000.14 of this chapter.

§ 1001.15 Fluid milk product.

See § 1000.15 of this chapter.

1001.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1001.17 [Reserved]

§ 1001.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1001.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

VOL 63 ISS 20 JA 30 1998 UMI

Handler Reports

§ 1001.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office receives the report on or before the 9th day after the end of the month, in the detail and on prescribed forms, as follows:

(a) Each pool plant operator and each handler described in § 1000.9(c), shall report for each of its operations the following information:

(1) Product pounds, pounds of butterfat, pounds of protein, pounds of nonfat solids other than protein (other solids), and the value of the somatic cell adjustment contained in or represented by:

(i) Receipts of producer milk, including producer milk diverted by the reporting handler; and

(ii) Receipts of milk from handlers described in § 1000.9(c);

(2) Product pounds and pounds of butterfat contained in:

(i) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(ii) Receipts of other source milk; and

(iii) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products; and

(3) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph; and

(4) Such other information with respect to the receipts and utilization of skim milk, butterfat, milk protein, other nonfat solids, and somatic cell information as the market administrator may prescribe.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler not specified in paragraphs (a) or (b) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1001.31 Payroll reports.

(a) On or before the 22nd day after the end of each month, each handler described in § 1000.9(a) and (c) shall report to the market administrator its producer payroll for the month, in detail prescribed by the market administrator, showing for each producer the information specified in § 1001.73(e);

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1001.32 Other reports.

In addition to the reports required pursuant to §§ 1001.30 and 1001.31, each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1001.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1001.41 [Reserved]

§ 1001.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1001.43 General classification rules.

See § 1000.43 of this chapter.

§ 1001.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1001.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1001.50 Class prices and component prices.

See § 1000.50 of this chapter.

§ 1001.51 Class I differential and price.

The Class I differential shall be the differential established for Suffolk County, Massachusetts, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Suffolk County, Massachusetts.

§ 1001.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1001.53 Announcement of class and component prices.

See § 1000.53 of this chapter.

§ 1001.54 Equivalent price.

See § 1000.54 of this chapter.

Producer Price Differential

§ 1001.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) as follows:

(a) *Class I value.* (1) Multiply the pounds of skim milk in Class I as determined pursuant to § 1000.44(a) by the applicable Class I skim milk price; and

(2) Add an amount obtained by multiplying the total pounds of butterfat in Class I as determined pursuant to § 1000.44 (b) by the Class I butterfat price.

(b) *Class II value.* (1) Add an amount obtained by multiplying the hundredweight of milk in Class II as determined pursuant to § 1000.44(a) by 70 cents;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class II as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiplying the resulting pounds of nonfat solids by the nonfat solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class II as determined pursuant to § 1000.44(b) by the butterfat price.

(c) *Class III value.* (1) Add an amount obtained by multiplying the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average protein content of producer skim milk received by the handler, and multiplying the resulting pounds of protein by the protein price;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average other solids content of producer skim milk received by the handler, and multiplying the resulting pounds of other solids by the other solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class III as determined pursuant to § 1000.44(b) by the butterfat price.

(d) *Class IV value.* (1) Add an amount obtained by multiplying the pounds of skim milk in Class IV as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiplying the resulting pounds of nonfat solids by the nonfat solids price; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class IV as determined pursuant to § 1000.44(b) by the butterfat price.

(e) Add an adjustment for somatic cell content as determined by multiplying the value reported pursuant to § 1001.30(a)(1) by the percentage of the total producer milk allocated to Class II, Class III, and Class IV pursuant to § 1000.44(c).

(f) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective class skim milk prices and the respective class butterfat prices (Class I butterfat price for Class I and the butterfat price for all other classes) applicable at the location of the pool plant;

(g) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(h) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plant;

(i) Add the amount obtained from multiplying the difference between the Class I price and the Class III price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to §§ 1000.43(d) and 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(j) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I use pursuant to § 1000.43(d); and

(k) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(5) or (c).

§ 1001.61 Computation of producer price differential.

For each month the market administrator shall compute a producer price differential per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1001.71 for the preceding month shall not be included in the computation of the producer price differential. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the producer price differential in the following manner:

(a) Combine into one total the values computed pursuant to § 1001.60 for all handlers required to file reports prescribed in § 1001.30;

(b) Subtract the total of the values obtained by multiplying each handler's total pounds of protein, other solids, and butterfat contained in the milk for which an obligation was computed pursuant to § 1001.60 by the protein price, other solids price, and the butterfat price, respectively, and the total value of the somatic cell adjustment pursuant to § 1001.60(e);

(c) Add an amount equal to the sum of the location adjustments computed pursuant to § 1001.75;

(d) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(e) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(1) The total hundredweight of producer milk; and

(2) The total hundredweight for which a value is computed pursuant to § 1001.60(i); and

(f) Subtract not less than 4 cents nor more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result, rounded to the nearest cent, shall be known as the *producer price differential* for the month.

§ 1001.62 Announcement of producer prices.

On or before the 13th day after the end of the month, the market administrator shall announce the following prices and information:

(a) The producer price differential;

(b) The protein price;

(c) The other solids price;

(d) The butterfat price;

(e) The somatic cell adjustment rate;

(f) The average butterfat, nonfat solids, protein, and other solids content of producer milk; and

(g) The statistical uniform price for milk containing 3.5 percent butterfat.

Payments for Milk

§ 1001.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1001.71 Payments to the producer-settlement fund.

The payments to the producer-settlement fund specified in § 1000.71 are due no later than the 15th day after the end of the month.

§ 1001.72 Payments from the producer-settlement fund.

See § 1000.72 of this chapter.

§ 1001.73 Payments to producers and to cooperative associations.

(a) Each pool plant operator that is not paying a cooperative association for producer milk shall pay each producer as follows:

(1) *Partial payment.* For each producer who has not discontinued shipments as of the 23rd day of the month, payment shall be made so that it is received by the producer on or before the 26th day of the month for milk received during the first 15 days of the month at not less than the lowest announced class price for the preceding month, less proper deductions authorized in writing by the producer;

(2) *Final payment.* For milk received during the month, payment shall be made so that it is received by each producer no later than the day after the payment date required in § 1000.72 in an amount computed as follows:

(i) Multiply the hundredweight of producer milk received times the producer price differential for the month as adjusted pursuant to § 1001.75;

VOL 63 ISS 20 JA 30 1998 UMI

(ii) Multiply the pounds of butterfat received times the butterfat price for the month;

(iii) Multiply the pounds of protein received times the protein price for the month;

(iv) Multiply the pounds of other solids received times the other solids price for the month;

(v) Multiply the hundredweight of milk received times the somatic cell adjustment for the month;

(vi) Add the amounts computed in paragraph (a)(2)(i) through (v) of this section, and from that sum:

(A) Subtract the partial payment made pursuant to paragraph (a)(1) of this section;

(B) Subtract the deduction for marketing services pursuant to § 1000.86;

(C) Add or subtract for errors made in previous payments to the producer; and

(D) Subtract proper deductions authorized in writing by the producer.

(b) One day before partial and final payments are due pursuant to paragraph (a) of this section, each pool plant operator shall pay a cooperative association for milk received as follows:

(1) *Partial payment to a cooperative association.* For bulk milk/skimmed milk received during the first 15 days of the month from a cooperative association in any capacity, except as the operator of a pool plant, the payment shall be equal to the hundredweight of milk received multiplied by the lowest announced class price for the preceding month;

(2) *Partial payment to a cooperative association for milk transferred from its pool plant.* For bulk milk/skimmed milk products received during the first 15 days of the month from a cooperative association in its capacity as the operator of a pool plant, the partial payment shall be at the pool plant operator's estimated use value of the milk using the most recent class prices available, adjusted for butterfat value and plant location;

(3) *Final payment to a cooperative association for milk transferred from its pool plant.* Following the classification of bulk fluid milk products and bulk fluid cream products received during the month from a cooperative association in its capacity as the operator of a pool plant, the final payment for such receipts shall be determined as follows:

(i) Multiply the hundredweight of Class I skim milk by the Class I skim milk price for the month;

(ii) Multiply the pounds of Class I butterfat by the Class I butterfat price for the month;

(iii) Multiply the hundredweight of Class II skim milk by the Class II differential price for the month;

(iv) Multiply the pounds of nonfat solids received in Class II and Class IV milk times the nonfat solids price for the month;

(v) Multiply the pounds of butterfat in Class II, III, and IV milk times the butterfat price for the month;

(vi) Multiply the pounds of protein received in Class III milk times the protein price for the month;

(vii) Multiply the pounds of other solids received in Class III milk times the other solids price for the month;

(viii) Multiply the hundredweight of Class II, Class III, and Class IV milk received times the somatic cell adjustment;

(ix) Add together the amounts computed in paragraph (b)(3)(i) through (viii) of this section and from that sum deduct any payment made pursuant to paragraph (b)(2) of this section.

(4) *Final payment to a cooperative association for bulk milk received directly from producers' farms.* For bulk milk received from a cooperative association during the month, including the milk of producers who are not members of such association and who the market administrator determines have authorized the cooperative association to collect payment for their milk, the final payment for such milk shall be an amount equal to the sum of the individual payments otherwise payable for such milk pursuant to paragraph (a)(2) of this section.

(c) If a handler has not received full payment from the market administrator pursuant to § 1001.72 by the payment date specified in paragraph (a) or (b) of this section, the handler may reduce payments pursuant to paragraphs (a) and (b) of this section, but by not more than the amount of the underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(d) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund, and in the event that the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant as the case may be.

(e) In making payments to producers pursuant to this section, each pool plant operator shall furnish each producer, except a producer whose milk was received from a cooperative association handler described in § 1000.9(a) or (c), a supporting statement in such form that it may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and the payroll number of the producer;

(2) The month and dates that milk was received from the producer, including the daily and total pounds of milk received;

(3) The total pounds of butterfat, protein, and other solids contained in the producer's milk;

(4) The somatic cell count of the producer's milk;

(5) The minimum rate or rates at which payment to the producer is required pursuant to this order;

(6) The rate used in making payment if the rate is other than the applicable minimum rate;

(7) The amount, or rate per hundredweight, or rate per pound of component, and the nature of each deduction claimed by the handler; and

(8) The net amount of payment to the producer or cooperative association.

§ 1001.74 [Reserved]

§ 1001.75 Plant location adjustments for producer milk and nonpool milk.

(a) The producer price differential for producer milk shall be adjusted according to the location of the plant at which the milk was physically received by subtracting from the price the amount by which the Class I price specified in § 1001.50 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1001.50, the difference shall be added to the producer price differential; and

(b) The producer price differential applicable for other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted producer price differential shall not be less than zero.

§ 1001.76 Payments by a handler operating a partially regulated distributing plant.

See § 1000.76 of this chapter.

§ 1001.77 Adjustment of accounts.

Subpart—Order Regulating Handling

General Provisions

§ 1005.1 General provisions.

The terms, definitions, and provisions in part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1005.2 Appalachian marketing area.

The marketing area means all the territory within the bounds of the following states and political subdivisions, including all piers, docks and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State or Federal) reservations, installations, institutions, or other similar establishments if any part thereof is within any of the listed states or political subdivisions:

Georgia Counties

Catoosa, Chattooga, Dade, Fannin, Murray, Walker, and Whitfield.

Indiana Counties

Clark, Crawford, Daviess, Dubois, Floyd, Gibson, Greene, Harrison, Knox, Martin, Orange, Perry, Pike, Posey, Scott, Spencer, Sullivan, Vanderburgh, Warrick, and Washington.

Kentucky Counties

Adair, Anderson, Bath, Bell, Bourbon, Boyle, Breathitt, Breckinridge, Bullitt, Butler, Carroll, Carter, Casey, Clark, Clay, Clinton, Cumberland, Daviess, Edmonson, Elliott, Estill, Fayette, Fleming, Franklin, Gallatin, Garrard, Grayson, Green, Hancock, Hardin, Harlan, Hart, Henderson, Henry, Hopkins, Jackson, Jefferson, Jessamine, Knott, Knox, Larue, Laurel, Lee, Leslie, Letcher, Lincoln, Madison, Marion, McCreary, McLean, Meade, Menifee, Mercer, Montgomery, Morgan, Muhlenberg, Nelson, Nicholas, Ohio, Oldham, Owen, Owsley, Perry, Powell, Pulaski, Rockcastle, Rowan, Russell, Scott, Shelby, Spencer, Taylor, Trimble, Union, Washington, Wayne, Webster, Whitley, Wolfe, and Woodford.

North Carolina and South Carolina

All of the States of North Carolina and South Carolina.

Tennessee Counties

Anderson, Blount, Bradley, Campbell, Carter, Claiborne, Cocke, Cumberland, Grainger, Greene, Hamblen, Hamilton, Hancock, Hawkins, Jefferson, Johnson, Knox, Loudon, Marion, McMinn, Meigs, Monroe, Morgan, Polk, Rhea, Roane, Scott, Sequatchie, Sevier, Sullivan, Unicoi, Union, and Washington.

Virginia Counties and Cities

Buchanan, Dickenson, Lee, Russell, Scott, Tazewell, Washington, and Wise, and cities of Bristol and Norton.

West Virginia Counties

McDowell and Mercer.

§ 1005.3 Route disposition.

See § 1000.3 of this chapter.

§ 1005.4 Plant.

See § 1000.4 of this chapter.

§ 1005.5 Distributing plant.

See § 1000.5 of this chapter.

§ 1005.6 Supply plant.

See § 1000.6 of this chapter.

§ 1005.7 Pool plant.

Pool plant means a plant specified in paragraphs (a) through (d) of this section, or a unit of plants as specified in paragraph (e) of this section, but excluding a plant specified in paragraph (g) of this section. The pooling standards described in paragraphs (a), (c), and (d) of this section are subject to modification pursuant to paragraph (f) of this section:

(a) A distributing plant from which during the month the total route disposition is equal to 50 percent or more of the total quantity of fluid milk products physically received at such plant and route disposition in the marketing area is at least 10 percent of such receipts. Packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the purpose of determining the transferring plant's pool status under this paragraph.

(b) Any distributing plant located in the marketing area which during the month processed a majority of its milk receipts into aseptically packaged fluid

VOL 63 ISS 20 JA 30 1998 UMI

milk products. If the plant had no route disposition in the marketing area during the month, the plant operator may request nonpool status for the plant.

(c) A supply plant from which 50 percent of the total quantity of milk that is physically received during the month from dairy farmers and handlers described in § 1000.9(c) is transferred to pool distributing plants.

(d) A plant located within the marketing area or in the State of Virginia that is operated by a cooperative association if pool plant status under this paragraph is requested for such plant by the cooperative association and during the month at least 60 percent of the producer milk of members of such cooperative association is delivered directly from farms to pool distributing plants or is transferred to such plants as a fluid milk product from the cooperative's plant.

(e) Two or more plants operated by the same handler and that are located within the marketing area may qualify for pool status as a unit by meeting the total and in-area route disposition requirements specified in paragraph (a) of this section and the following additional requirements:

(1) At least one of the plants in the unit must qualify as a pool plant pursuant to paragraph (a) of this section;

(2) Other plants in the unit must process only Class I or Class II products and must be located in a pricing zone providing the same or a lower Class I price than the price applicable at the distributing plant included in the unit pursuant to paragraph (e)(1) of this section; and

(3) A written request to form a unit, or to add or remove plants from a unit, must be filed with the market administrator prior to the first day of the month for which it is to be effective.

(f) The applicable percentages in paragraphs (a), (c), and (d) of this section may be increased or decreased up to 10 percentage points by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested parties if the request is made in writing at least 15 days prior to the date for which the requested revision is desired effective. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

(g) The term pool plant shall not apply to the following plants:

(1) A producer-handler plant;

(2) An exempt plant as defined in § 1000.8(e);

(3) A plant qualified pursuant to paragraph (a) of this section which is not located within any Federal order marketing area, meets the pooling requirements of another Federal order, and has had greater route disposition in such other Federal order marketing area for 3 consecutive months;

(4) A plant qualified pursuant to paragraph (a) of this section which is located in another Federal order marketing area, meets the pooling standards of the other Federal order, and has not had a majority of its route disposition in this marketing area for 3 consecutive months or is locked into pool status under such other Federal order without regard to its route disposition in any other Federal order marketing area;

(5) A plant qualified pursuant to paragraph (c) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under such other order than are made to plants regulated under this order, or such plant has automatic pooling status under such other order; and

(6) That portion of a pool plant designated as a "nonpool plant" that is physically separate and operated separately from the pool portion of such plant. The designation of a portion of a regulated plant as a nonpool plant must be requested in writing by the handler and must be approved by the market administrator.

§ 1005.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1005.9 Handler.

See § 1000.9 of this chapter.

§ 1005.10 Producer-handler.

Producer-handler means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds per month, unless the person requests that the two be operated as separate entities with the distributing plant regulated under § 1005.7(a) and the farm operated as a producer under § 1005.12;

(b) Receives no fluid milk products, and acquires no fluid milk products for route disposition, from sources other than own farm production;

(c) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own farm production;

(d) Disposes of no fluid milk products using the distribution system of another handler; and

(e) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled, and the processing, packaging, and distribution operations, are the producer-handler's own enterprise and are operated at the producer-handler's own risk.

§ 1005.11 [Reserved]

§ 1005.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk (or components of milk) is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1005.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1005.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I; and

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order.

§ 1005.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk) and butterfat contained in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of a pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it is picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants;

(c) Diverted by a pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or a handler described in § 1000.9(c) to a nonpool plant, subject to the following conditions:

(1) In any month of July through December, not less than 6 days' production of the producer whose milk is diverted is physically received at a pool plant during the month;

(2) In any month of January through June, not less than 2 days' production of the producer whose milk is diverted is physically received at a pool plant during the month;

(3) The total quantity of milk so diverted during the month by a cooperative association shall not exceed 25 percent during the months of July through November, January, and February, and 40 percent during the months of December and March through June, of the producer milk that the cooperative association caused to be delivered to, and physically received at, pool plants during the month;

(4) The operator of a pool plant that is not a cooperative association may divert any milk that is not under the control of a cooperative association that diverts milk during the month pursuant to paragraph (d) of this section. The total quantity of milk so diverted during the month shall not exceed 25 percent during the months of July through November, January, and February, and 40 percent during the months of December and March through June, of the producer milk physically received at such plant (or such unit of plants in the case of plants that pool as a unit pursuant to § 1005.7(d)) during the month, excluding the quantity of producer milk received from a handler described in § 1000.9(c);

(5) Any milk diverted in excess of the limits prescribed in paragraphs (d)(3) and (4) of this section shall not be producer milk. If the diverting handler or cooperative association fails to designate the dairy farmers' deliveries that will not be producer milk, no milk diverted by the handler or cooperative association shall be producer milk;

(6) Diverted milk shall be priced at the location of the plant to which diverted; and

(7) The delivery day requirements and the diversion percentages in paragraphs (d)(1) through (4) of this section may be increased or decreased by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested persons. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

§ 1005.14 Other source milk.

See § 1000.14 of this chapter.

§ 1005.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1005.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1005.17 [Reserved]

§ 1005.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1005.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1005.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office receives the report on or before the 7th day after the end of the month, in the detail and on prescribed forms, as follows:

(a) With respect to each of its pool plants, the quantities of skim milk and butterfat contained in or represented by:

(1) Receipts of producer milk, including producer milk diverted by the plant operator to other plants;

(2) Receipts of milk from handlers described in § 1000.9(c);

(3) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(4) Receipts of other source milk;

(5) Receipts of bulk milk from a plant regulated under another Federal order, except Federal Order 1007, for which a transportation credit is requested pursuant to § 1005.82;

(6) Receipts of producer milk described in § 1005.82(c)(2), including the identity of the individual producers whose milk is eligible for the transportation credit pursuant to that paragraph and the date that such milk was received;

(7) For handlers submitting transportation credit requests, transfers of bulk milk to nonpool plants, including the dates that such milk was transferred;

(8) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products; and

(9) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler described in § 1000.9(c) shall report:

(1) The quantities of all skim milk and butterfat contained in receipts of milk from producers;

(2) The utilization or disposition of all such receipts; and

(3) With respect to milk for which a cooperative association is requesting a transportation credit pursuant to § 1005.82, all of the information required in paragraph (a)(5), (a)(6), and (a)(7) of this section.

(d) Each handler not specified in paragraphs (a) through (c) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1005.31 Payroll reports.

(a) On or before the 20th day after the end of each month, each handler described in § 1000.9(a) and (c) shall report to the market administrator its producer payroll for the month, in detail prescribed by the market administrator, showing for each producer the information specified in § 1005.73(e).

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

VOL
63
ISS
20
JA
30
1998
UMI

§ 1005.32 Other reports.

(a) On or before the 20th day after the end of each month, each handler described in § 1000.9(a) and (c) shall report to the market administrator any adjustments to transportation credit requests as reported pursuant to § 1005.30(a)(5), (6), and (7).

(b) In addition to the reports required pursuant to §§ 1005.30, 31, and 32(a), each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1005.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1005.41 [Reserved]

§ 1005.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1005.43 General classification rules.

See § 1000.43 of this chapter.

§ 1005.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1005.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1005.50 Class prices, component prices, Class I differential and price.

Class prices and component prices are described in § 1000.50. The Class I differential shall be the differential established for Meklenburg County, North Carolina, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Meklenburg County, North Carolina.

§ 1005.51 [Reserved]

§ 1005.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1005.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1005.54 Equivalent price.

See § 1000.54 of this chapter.

Uniform Price

§ 1005.60 Handler's value of milk.

For the purpose of computing the uniform price, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) as follows:

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) by the applicable skim milk and butterfat prices, and add the resulting amounts;

(b) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(c) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(d) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(e) Add the amount obtained from multiplying the Class I price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(f) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I use pursuant to § 1000.43(e); and

(g) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(5) or (c).

§ 1005.61 Computation of uniform price, uniform butterfat price and uniform skim milk price.

(a) *Uniform price.* For each month the market administrator shall compute the uniform price per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1005.71 for the preceding month shall not be included in the computation of the uniform price. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the uniform price in the following manner:

(1) Combine into one total the values computed pursuant to § 1005.60 for all handlers required to file reports prescribed in § 1005.30;

(2) Add an amount equal to the sum of the location adjustments computed pursuant to § 1005.75;

(3) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(4) Add or subtract, as the case may be, to obtain an all-producer milk test of 3.5 percent butterfat, the value of the required pounds of butterfat times the uniform butterfat price computed in paragraph (b) of this section;

(5) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(i) The total hundredweight of producer milk; and

(ii) The total hundredweight for which a value is computed pursuant to § 1005.60(f); and

(6) Subtract not less than 4 cents nor more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result, rounded to the nearest cent, shall be known as the "uniform price" for the month.

(b) *Uniform butterfat price.* The uniform butterfat price per pound, rounded to the nearest one-hundredth cent, shall be obtained by multiplying the pounds of butterfat in producer milk allocated to each class pursuant to § 1000.44(b) by the respective class butterfat prices (Class I butterfat price for Class I and the butterfat price for all other classes) and dividing the sum of such values by the total pounds of such butterfat.

(c) *Uniform skim milk price.* The uniform skim milk price per hundredweight, rounded to the nearest cent, shall be the uniform price for the month pursuant to pursuant to paragraph (a) of this section less the uniform butterfat price for the month pursuant to paragraph (b) of this section multiplied by 3.5 pounds of butterfat, with the result divided by .965.

§ 1005.62 Announcement of uniform price, uniform butterfat price and uniform skim milk price.

On or before the 11th day after the end of the month, the market administrator shall announce the following prices and information:

(a) The uniform price pursuant to § 1005.61 for such month;

(b) The uniform butterfat price pursuant to § 1005.61(b) for such month; and

(c) The uniform skim milk price pursuant to § 1005.61(c) for such month.

Payments for Milk

§ 1005.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1005.71 Payments to the producer-settlement fund.

The payments to the producer-settlement fund specified in § 1000.71 are due no later than the 12th day after the end of the month.

§ 1005.72 Payments from the producer-settlement fund.

See § 1000.72 of this chapter.

§ 1005.73 Payments to producers and to cooperative associations.

(a) Each pool plant operator that is not paying a cooperative association for producer milk shall pay each producer as follows:

(1) *Partial payment.* For each producer who has not discontinued shipments as of the 23rd day of the month, payment shall be made so that it is received by the producer on or before the 26th day of the month for milk received during the first 15 days of the month at not less than the 90 percent of the preceding month's uniform price, adjusted for plant location pursuant to § 1005.75 and proper deductions authorized in writing by the producer;

(2) *Final payment.* For milk received during the month, payment shall be made so that it is received by each producer one day after the payment date required in § 1000.72 an amount computed as follows:

(i) Multiply the hundredweight of producer milk received times the uniform price for the month as adjusted pursuant to § 1005.75;

(ii) Multiply the hundredweight of producer skim milk received times the uniform skim milk price for the month;

(iii) Multiply the pounds of butterfat received times the uniform butterfat price for the month;

(iv) Add the amounts computed in paragraph (a)(2)(i), (ii), and (iii) of the section, and from that sum:

(A) Subtract the partial payment made pursuant to paragraph (a)(1) of this section;

(B) Subtract the deduction for marketing services pursuant to § 1000.86;

(C) Add or subtract for errors made in previous payments to the producer; and

(D) Subtract proper deductions authorized in writing by the producer.

(b) One day before partial and final payments are due pursuant to paragraph (a) of this section, each pool plant operator shall pay a cooperative association for milk received as follows:

(1) *Partial payment to a cooperative association.* For bulk milk/skimmed milk received during the first 15 days of the month from a cooperative association in any capacity, except as the operator of a pool plant, the payment shall be equal to the hundredweight of milk received multiplied by 90 percent of the preceding month's uniform price, adjusted for plant location pursuant to § 1005.75;

(2) *Partial payment to a cooperative association for milk transferred from its pool plant.* For bulk fluid milk products and bulk fluid cream products received during the first 15 days of the month from a cooperative association in its capacity as the operator of a pool plant, the partial payment shall be at the pool plant operator's estimated use value of the milk using the most recent class prices available, adjusted for butterfat value and plant location;

(3) *Final payment to a cooperative association for milk transferred from its pool plant.* For bulk fluid milk products and bulk fluid cream products received during the month from a cooperative association in its capacity as the operator of a pool plant, the final payment shall be the classified value of such milk as determined by multiplying the pounds of milk assigned to each class pursuant to § 1000.44 by the class prices for the month, adjusted for plant location and butterfat value, and subtracting from this sum the partial payment made pursuant to paragraph (b)(2) of this section.

(4) *Final payment to a cooperative association for bulk milk received directly from producers' farms.* For bulk milk received from a cooperative association during the month, including the milk of producers who are not members of such association and who the market administrator determines have authorized the cooperative association to collect payment for their milk, the final payment for such milk shall be an amount equal to the sum of the individual payments otherwise payable for such milk pursuant to paragraph (a)(2) of this section.

(c) If a handler has not received full payment from the market administrator pursuant to § 1005.72 by the payment date specified in paragraph (a) or (b) of this section, the handler may reduce payments pursuant to paragraphs (a) and (b) of this section, but by not more than the amount of the underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(d) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund, and in the event that the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant as the case may be.

(e) In making payments to producers pursuant to this section, each pool plant operator shall furnish each producer, except a producer whose milk was received from a handler described in § 1000.9(a) or (c), a supporting statement in such form that it may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and the payroll number of the producer;

(2) The month and dates that milk was received from the producer, including the daily and total pounds of milk received;

(3) The total pounds of butterfat in the producer's milk;

VOL 63 ISS 20 JA 30 1998 UMI

(4) The minimum rate at which payment to the producer is required pursuant to this order;

(5) The rate used in making payment if the rate is other than the applicable minimum rate;

(6) The amount, or rate per hundredweight, and nature of each deduction claimed by the handler; and

(7) The net amount of payment to the producer or cooperative association.

§ 1005.74 [Reserved]

§ 1005.75 Plant location adjustments for producer milk and nonpool milk.

(a) The uniform price for producer milk shall be adjusted according to the location of the plant at which the milk was physically received by subtracting from the price the amount by which the Class I price specified in § 1005.50 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1005.50, the difference shall be added to the uniform price; and

(b) The uniform price applicable for other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted uniform price shall not be less than the lowest announced class price.

§ 1005.76 Payments by a handler operating a partially regulated distributing plant.

See § 1000.76 of this chapter.

§ 1005.77 Adjustment of accounts.

See § 1000.77 of this chapter.

§ 1005.78 Charges on overdue accounts.

See § 1000.78 of this chapter.

Marketwide Service Payments

§ 1005.80 Transportation credit balancing fund.

The market administrator shall maintain a separate fund known as the *Transportation Credit Balancing Fund* into which shall be deposited the payments made by handlers pursuant to § 1005.81 and out of which shall be made the payments due handlers pursuant to § 1005.82. Payments due a handler shall be offset against payments due from the handler.

§ 1005.81 Payments to the transportation credit balancing fund.

(a) On or before the 12th day after the end of the month, each handler operating a pool plant and each handler specified in § 1000.9(a) and (c) shall pay to the market administrator a transportation credit balancing fund assessment determined by multiplying the pounds of Class I producer milk assigned pursuant to § 1005.44 by $0.065 per hundredweight or such lesser amount as the market administrator deems necessary to maintain a balance in the fund equal to the total transportation credits disbursed during the prior June-January period. In the event that during any month of the June-January period the fund balance is insufficient to cover the amount of credits that are due, the assessment should be based upon the amount of credits that would have been disbursed had the fund balance been sufficient.

(b) The market administrator shall announce publicly on or before the 5th day of the month the assessment pursuant to paragraph (a) of this section for the following month.

§ 1005.82 Payments from the transportation credit balancing fund.

(a) Payments from the transportation credit balancing fund to handlers and cooperative associations requesting transportation credits shall be made as follows:

(1) On or before the 13th day after the end of each of the months of July through December and any other month in which transportation credits are in effect pursuant to paragraph (b) of this section, the market administrator shall pay to each handler that received, and reported pursuant to § 1005.30(a)(5), bulk milk transferred from a plant fully regulated under another Federal order as described in paragraph (c)(1) of this section or that received, and reported pursuant to § 1005.30(a)(6), milk directly from producers' farms as specified in paragraph (c)(2) of this section, a preliminary amount determined pursuant to paragraph (d) of this section to the extent that funds are available in the transportation credit balancing fund. If an insufficient balance exists to pay all of the credits computed pursuant to this section, the market administrator shall distribute the balance available in the transportation credit balancing fund by reducing payments prorata using the percentage derived by dividing the balance in the fund by the total credits that are due for the month. The amount of credits resulting from this initial proration shall be subject to audit adjustment pursuant to paragraph (a)(2) of this section;

(2) The market administrator shall accept adjusted requests for transportation credits on or before the 20th day of the month following the month for which such credits were requested pursuant to § 1005.32(a). After such date, a preliminary audit will be conducted by the market administrator, who will recalculate any necessary proration of transportation credit payments for the preceding month pursuant to paragraph (a) of this section. Handlers will be promptly notified of an overpayment of credits based upon this final computation and remedial payments to or from the transportation credit balancing fund will be made on or before the next payment date for the following month;

(3) Transportation credits paid pursuant to paragraph (a)(1) and (2) of this section shall be subject to final verification by the market administrator pursuant to § 1000.77. Adjusted payments to or from the transportation credit balancing fund will remain subject to the final proration established pursuant to paragraph (a)(2) of this section; and

(4) In the event that a qualified cooperative association is the responsible party for whose account such milk is received and written documentation of this fact is provided to the market administrator pursuant to § 1005.30(c)(3) prior to the date payment is due, the transportation credits for such milk computed pursuant to this section shall be made to such cooperative association rather than to the operator of the pool plant at which the milk was received.

(b) The market administrator may extend the period during which transportation credits are in effect (i.e., the transportation credit period) to the months of January and June if a written request to do so is received 15 days prior to the beginning of the month for which the request is made and, after conducting an independent investigation, finds that such extension is necessary to assure the market of an adequate supply of milk for fluid use. Before making such a finding, the market administrator shall notify the Director of the Dairy Division and all handlers in the market that an extension is being considered and invite written data, views, and arguments. Any decision to extend the transportation credit period must be issued in writing prior to the first day of the month for which the extension is to be effective.

(c) Transportation credits shall apply to the following milk:

(1) Bulk milk received from a plant regulated under another Federal order, except Federal Orders 1007, and allocated to Class I milk pursuant to § 1000.44(a)(12); and

(2) Bulk milk received directly from the farms of dairy farmers at pool distributing plants subject to the following conditions:

(i) The quantity of such milk that shall be eligible for the transportation credit shall be determined by multiplying the total pounds of milk received from producers meeting the conditions of this paragraph by the lower of:

(A) The marketwide estimated Class I utilization of all handlers for the month pursuant to § 1000.45(a); or

(B) The Class I utilization of all producer milk of the pool plant operator receiving the milk after the computations described in § 1000.44;

(ii) The dairy farmer was not a "producer" under this order during more than 2 of the immediately preceding months of January through June and not more than 50 percent of the production of the dairy farmer during those 2 months, in aggregate, was received as producer milk under this order during those 2 months. However, if January and/or June are months in which transportation credits are disbursed pursuant to paragraph (a) of this section, these months shall not be included in the 2-month limit provided in this paragraph; and

(iii) The farm on which the milk was produced is not located within the specified marketing area of this order or the marketing area of Federal Order 1007.

(d) Transportation credits shall be computed as follows:

(1) The market administrator shall subtract from the pounds of milk described in paragraphs (c)(1) and (2) of this section the pounds of bulk milk transferred from the pool plant receiving the supplemental milk if milk was transferred to a nonpool plant on the same calendar day that the supplemental milk was received. For this purpose, the transferred milk shall be subtracted from the most distant load of supplemental milk received, and then in sequence with the next most distant load until all of the transfers have been offset;

(2) With respect to the pounds of milk described in paragraph (c)(1) of this section that remain after the computations described in paragraph (d)(1) of this section, the market administrator shall:

(i) Determine the shortest hard-surface highway distance between the shipping plant and the receiving plant;

(ii) Multiply the number of miles so determined by 0.35 cent;

(iii) Subtract the other order's Class I price applicable at the shipping plant's location from the Class I price applicable at the receiving plant as specified in § 1005.53;

(iv) Subtract any positive difference computed in paragraph (d)(2)(iii) of this section from the amount computed in paragraph (d)(2)(ii) of this section; and

(v) Multiply the remainder computed in paragraph (d)(2)(iv) of this section by the hundredweight of milk described in paragraph (d)(2) of this section.

(3) For the remaining milk described in paragraph (c)(2) of this section after computations described in paragraph (d)(1) of this section, the market administrator shall:

(i) Determine an origination point for each load of milk by locating the nearest city to the last producer's farm from which milk was picked up for delivery to the receiving pool plant. Alternatively, the milk hauler that is transporting the milk of producers described in paragraph (c)(2) of this section may establish an origination point following the last farm pickup by stopping at the nearest independently-operated truck stop with a certified truck scale and obtaining a weight certificate indicating the weight of the truck and its contents, the date and time of weighing, and the location of the truck stop;

(ii) Determine the shortest hard-surface highway distance between the receiving pool plant and the truck stop or city, as the case may be;

(iii) Subtract 85 miles from the mileage so determined;

(iv) Multiply the remaining miles so computed by 0.35 cent;

(v) If the origination point determined pursuant to paragraph (d)(3)(i) of this section is in a Federal order marketing area, subtract the Class I price applicable at the origination point pursuant to the provisions of such other order (as if the origination point were a plant location) from the Class I price applicable at the distributing plant receiving the milk. If the origination point is not in any Federal order marketing area, determine the Class I price at the origination point based upon the provisions of this order and subtract this price from the Class I price applicable at the distributing plant receiving the milk;

(vi) Subtract any positive difference computed in paragraph (d)(3)(v) of this section from the amount computed in paragraph (d)(3)(iv) of this section; and

(vii) Multiply the remainder computed in paragraph (d)(3)(vi) by the hundredweight of milk described in paragraph (d)(3) of this section.

Administrative Assessment and Marketing Service Deduction

§ 1005.85 Assessment for order administration.

See § 1000.85 of this chapter.

§ 1005.86 Deduction for marketing services.

See § 1000.86 of this chapter.

PART 1006—MILK IN THE FLORIDA MARKETING AREA

Subpart—Order Regulating Handling

General Provisions

Sec.
1006.1 General provisions.

1006.86 Deduction for marketing services.

Authority: 7 U.S.C. 601–674.

Subpart—Order Regulating Handling

General Provisions

§ 1006.1 General provisions.

The terms, definitions, and provisions in part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1006.2 Florida marketing area.

The marketing area means all the territory within the State of Florida, except the counties of Escambia, Okaloosa, Santa Rosa, and Walton., including all piers, docks and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State or Federal) reservations, installations, institutions, or other similar establishments if any part thereof is within any of the listed states or political subdivisions.

§ 1006.3 Route disposition.

See § 1000.3 of this chapter.

§ 1006.4 Plant.

See § 1000.4 of this chapter.

§ 1006.5 Distributing plant.

See § 1000.5 of this chapter.

§ 1006.6 Supply plant.

See § 1000.6 of this chapter.

§ 1006.7 Pool plant.

Pool plant means a plant specified in paragraphs (a) through (d) of this section, or a unit of plants as specified in paragraph (e) of this section, but excluding a plant specified in paragraph (g) of this section. The pooling standards described in paragraphs (a), (c), and (d) of this section are subject to modification pursuant to paragraph (f) of this section:

(a) A distributing plant from which during the month the total route disposition is equal to 50 percent or more of the total quantity of fluid milk products physically received at such plant and route disposition in the marketing area is at least 10 percent of such receipts. Packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the purpose of determining the transferring plant's pool status under this paragraph.

(b) Any distributing plant located in the marketing area which during the month processed a majority of its milk receipts into aseptically packaged fluid milk products. If the plant had no route disposition in the marketing area during the month, the plant operator may request nonpool status for the plant.

(c) A supply plant from which 60 percent of the total quantity of milk that is physically received during the month from dairy farmers and handlers described in § 1000.9(c) is transferred to pool distributing plants.

(d) A plant located within the marketing area that is operated by a cooperative association if pool plant status under this paragraph is requested for such plant by the cooperative association and during the month 60 percent of the producer milk of members of such cooperative association is delivered directly from farms to pool distributing plants or is transferred to such plants as a fluid milk product from the cooperative's plant.

(e) Two or more plants operated by the same handler and that are located within the marketing area may qualify for pool status as a unit by meeting the total and in-area route disposition requirements specified in paragraph (a) of this section and the following additional requirements:

(1) At least one of the plants in the unit must qualify as a pool plant pursuant to paragraph (a) of this section;

(2) Other plants in the unit must process only Class I or Class II products and must be located in a pricing zone providing the same or a lower Class I price than the price applicable at the distributing plant included in the unit pursuant to paragraph (e)(1) of this section; and

(3) A written request to form a unit, or to add or remove plants from a unit, must be filed with the market administrator prior to the first day of the month for which it is to be effective.

(f) The applicable percentages in paragraphs (a), (c), and (d) of this section may be increased or decreased up to 10 percentage points by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested parties if the request is made in writing at least 15 days prior to the date for which the requested revision is desired effective. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

(g) The term pool plant shall not apply to the following plants:

(1) A producer-handler plant;

(2) An exempt plant as defined in § 1000.8(e);

(3) A plant qualified pursuant to paragraph (a) of this section which is not located within any Federal order marketing area, meets the pooling requirements of another Federal order, and has had greater route disposition in such other Federal order marketing area for 3 consecutive months;

(4) A plant qualified pursuant to paragraph (a) of this section which is located in another Federal order marketing area, meets the pooling standards of the other Federal order, and has not had a majority of its route disposition in this marketing area for 3 consecutive months or is locked into pool status under such other Federal order without regard to its route disposition in any other Federal order marketing area; and

(5) A plant qualified pursuant to paragraph (c) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under such other order than are made to plants regulated under this order, or such plant has automatic pooling status under such other order.

§ 1006.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1006.9 Handler.

See § 1000.9 of this chapter.

§ 1006.10 Producer-handler.

Producer-handler means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds per month, unless the person requests that the two be operated as separate entities with the distributing plant regulated under § 1006.7(a) and the farm operated as a producer under § 1006.12;

(b) Receives no fluid milk products, and acquires no fluid milk products for route disposition, from sources other than own farm production;

(c) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own farm production;

(d) Disposes of no fluid milk products using the distribution system of another handler; and

(e) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled, and the processing, packaging, and distribution operations, are the producer-handler's own enterprise and are operated at the producer-handler's own risk.

§ 1006.11 [Reserved]

§ 1006.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk (or components of milk) is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1006.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1006.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I; and

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order.

§ 1006.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk) and butterfat contained in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of a pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it is picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants;

(c) Diverted by a pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or a handler described in § 1000.9(c) to a nonpool plant, subject to the following conditions:

(1) In any month, not less than 10 days' production of the producer whose milk is diverted is physically received at a pool plant during the month;

(2) The total quantity of milk so diverted during the month by a cooperative association shall not exceed 20 percent during the months of July through November, 25 percent during the months of December through February, and 40 percent during all other months, of the producer milk that the cooperative association caused to be delivered to, and physically received at, pool plants during the month;

(3) The operator of a pool plant that is not a cooperative association may divert any milk that is not under the control of a cooperative association that diverts milk during the month pursuant to paragraph (d) of this section. The total quantity of milk so diverted during the month shall not exceed 20 percent during the months of July through November, 25 percent during the months of December through February, and 40 percent during all other months, of the producer milk physically received at such plant (or such unit of plants in the case of plants that pool as a unit pursuant to § 1006.7(d)) during the month, excluding the quantity of producer milk received from a handler described in § 1000.9(c);

(4) Any milk diverted in excess of the limits prescribed in paragraphs (d)(3) and (4) of this section shall not be producer milk. If the diverting handler or cooperative association fails to designate the dairy farmers' deliveries that will not be producer milk, no milk diverted by the handler or cooperative association shall be producer milk;

(5) Diverted milk shall be priced at the location of the plant to which diverted; and

(6) The delivery day requirements and the diversion percentages in paragraphs (d)(1) through (3) of this section may be increased or decreased by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested persons. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

§ 1006.14 Other source milk.

See § 1000.14 of this chapter.

§ 1006.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1006.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1006.17 [Reserved]

§ 1006.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1006.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1006.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office receives the report on or before the 7th day after the end of the month, in the detail and on prescribed forms, as follows:

(a) With respect to each of its pool plants, the quantities of skim milk and butterfat contained in or represented by:

(1) Receipts of producer milk, including producer milk diverted by the plant operator to other plants;

(2) Receipts of milk from handlers described in § 1000.9(c);

(3) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(4) Receipts of other source milk;

(5) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products; and

(6) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been producer milk if the plant had been

VOL 63 ISS 20 JA 30 1998 UMI

fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler described in § 1000.9(c) shall report:

(1) The quantities of all skim milk and butterfat contained in receipts of milk from producers; and

(2) The utilization or disposition of all such receipts.

(d) Each handler not specified in paragraphs (a) through (c) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1006.31 Payroll reports.

(a) On or before the 20th day after the end of each month, each handler described in § 1000.9 (a) and (c) shall report to the market administrator its producer payroll for the month, in detail prescribed by the market administrator, showing for each producer the information specified in § 1006.73(e).

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1006.32 Other reports.

(a) In addition to the reports required pursuant to §§ 1006.30 and 1006.31, each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

(b) [Reserved]

Classification of Milk

§ 1006.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1006.41 [Reserved]

§ 1006.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1006.43 General classification rules.

See § 1000.43 of this chapter.

§ 1006.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1006.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1006.50 Class prices, component prices, Class I differential and price.

Class prices and component prices are described in § 1000.50.

The Class I differential shall be the differential established for Hillsborough County, Florida, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Hillsborough County, Florida.

§ 1006.51 [Reserved]

§ 1006.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1006.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1006.54 Equivalent price.

See § 1000.54 of this chapter.

Uniform Price

§ 1006.60 Handler's value of milk.

For the purpose of computing the uniform price, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) as follows:

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) **by the applicable skim milk and butterfat prices, and add the resulting amounts;**

(b) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43 (b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(c) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(d) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3) (i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(e) Add the amount obtained from multiplying the Class I price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(f) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I use pursuant to § 1000.43(e); and

(g) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(5) or (c).

§ 1006.61 Computation of uniform price, uniform butterfat price and uniform skim milk price.

(a) *Uniform price.* For each month the market administrator shall compute the uniform price per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1006.71 for the preceding month shall not be included in the computation of the uniform price. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the uniform price in the following manner:

(1) Combine into one total the values computed pursuant to § 1006.60 for all handlers required to file reports prescribed in § 1006.30;

(2) Add an amount equal to the sum of the location adjustments computed pursuant to § 1006.75;

(3) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(4) Add or subtract, as the case may be, to obtain an all-producer milk test of 3.5 percent butterfat, the value of the required pounds of butterfat times the uniform butterfat price computed in paragraph (b) of this section;

(5) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(i) The total hundredweight of producer milk; and

(ii) The total hundredweight for which a value is computed pursuant to § 1006.60(f); and

(6) Subtract not less than 4 cents not more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result, rounded to the nearest cent, shall be known as the "uniform price" for the month.

(b) *Uniform butterfat price.* The uniform butterfat price per pound, rounded to the nearest one-hundredth cent, shall be obtained by multiplying the pounds of butterfat in producer milk allocated to each class pursuant to § 1000.44(b) by the respective class butterfat prices (Class I butterfat price for Class I and the butterfat price for all other classes) and dividing the sum of such values by the total pounds of such butterfat.

(c) *Uniform skim milk price.* The uniform skim milk price per hundredweight, rounded to the nearest cent, shall be the uniform price for the month pursuant to pursuant to paragraph (a) of this section less the uniform butterfat price for the month pursuant to paragraph (b) of this section multiplied by 3.5 pounds of butterfat, with the result divided by .965.

§ 1006.62 Announcement of uniform price, uniform butterfat price and uniform skim milk price.

On or before the 11th day after the end of the month, the market administrator shall announce the following prices and information:

(a) The uniform price pursuant to § 1006.61 for such month;

(b) The uniform butterfat price pursuant to § 1006.61(b) for such month; and

(c) The uniform skim milk price pursuant to § 1006.61(c) for such month.

Payments for Milk

§ 1006.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1006.71 Payments to the producer-settlement fund.

The payments to the producer-settlement fund specified in § 1000.71 are due no later than the 12th day after the end of the month.

§ 1006.72 Payments from the producer-settlement fund.

See § 1000.72 of this chapter.

§ 1006.73 Payments to producers and to cooperative associations.

(a) Each pool plant operator that is not paying a cooperative association for producer milk shall pay each producer as follows:

(1) *Partial payments.* (i) For each producer who has not discontinued shipments as of the 15th day of the month, payment shall be made so that it is received by the producer on or before the 20th day of the month for milk received during the first 15 days of the month at not less than the 85 percent of the preceding month's uniform price, adjusted for plant location pursuant to § 1006.75 and proper deductions authorized in writing by the producer; and

(ii) For each producer who has not discontinued shipments as of the last day of the month, payment shall be made so that it is received by the producer on or before the 5th day of the following month for milk received from the 16th to the last day of the month at not less than the 85 percent of the preceding month's uniform price, adjusted for plant location pursuant to 1006.75 and proper deductions authorized in writing by the producer.

(2) *Final payment.* For milk received during the month, payment shall be made so that it is received by each producer one day after the payment date required in § 1000.72 an amount computed as follows:

(i) Multiply the hundredweight of producer milk received times the uniform price for the month as adjusted pursuant to § 1006.75;

(ii) Multiply the hundredweight of producer skim milk received times the uniform skim milk price for the month;

(iii) Multiply the pounds of butterfat received times the uniform butterfat price for the month;

(iv) Add the amounts computed in paragraph (a)(2)(i), (ii), and (iii) of the section, and from that sum:

(A) Subtract the partial payment made pursuant to paragraph (a)(1) of this section;

(B) Subtract the deduction for marketing services pursuant to § 1000.86;

(C) Add or subtract for errors made in previous payments to the producer; and

(D) Subtract proper deductions authorized in writing by the producer.

(b) One day before partial and final payments are due pursuant to paragraph (a) of this section, each pool plant operator shall pay a cooperative association for milk received as follows:

(1) *Partial payment to a cooperative association.* For bulk milk/skimmed milk received during the first 15 days of the month from a cooperative association in any capacity, except as the operator of a pool plant, the payment shall be equal to the hundredweight of milk received multiplied by 90 percent of the preceding month's uniform price, adjusted for plant location pursuant to § 1006.75;

(2) *Partial payment to a cooperative association for milk transferred from its pool plant.* For bulk fluid milk products and bulk fluid cream products received during the first 15 days of the month from a cooperative association in its capacity as the operator of a pool plant, the partial payment shall be at the pool plant operator's estimated use value of the milk using the most recent class prices available, adjusted for butterfat value and plant location;

(3) *Final payment to a cooperative association for milk transferred from its pool plant.* For bulk fluid milk products and bulk fluid cream products received during the month from a cooperative association in its capacity as the operator of a pool plant, the final payment shall be the classified value of such milk as determined by multiplying the pounds of milk assigned to each class pursuant to § 1000.44 by the class prices for the month, adjusted for plant location and butterfat value, and subtracting from this sum the partial payment made pursuant to paragraph (b)(2) of this section.

(4) *Final payment to a cooperative association for bulk milk received directly from producers' farms.* For bulk milk received from a cooperative association during the month, including the milk of producers who are not members of such association and who the market administrator determines have authorized the cooperative association to collect payment for their milk, the final payment for such milk shall be an amount equal to the sum of the individual payments otherwise payable for such milk pursuant to paragraph (a)(2) of this section.

(c) If a handler has not received full payment from the market administrator

VOL 63 ISS 20 JA 30 1998 UMI

pursuant to § 1006.72 by the payment date specified in paragraph (a) or (b) of this section, the handler may reduce payments pursuant to paragraphs (a) and (b) of this section, but by not more than the amount of the underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(d) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund, and in the event that the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant as the case may be.

(e) In making payments to producers pursuant to this section, each pool plant operator shall furnish each producer, except a producer whose milk was received from a handler described in § 1000.9(a) or (c), a supporting statement in such form that it may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and the payroll number of the producer;

(2) The month and dates that milk was received from the producer, including the daily and total pounds of milk received;

(3) The total pounds of butterfat in the producer's milk;

(4) The minimum rate at which payment to the producer is required pursuant to this order;

(5) The rate used in making payment if the rate is other than the applicable minimum rate;

(6) The amount, or rate per hundredweight, and nature of each deduction claimed by the handler; and

(7) The net amount of payment to the producer or cooperative association.

§ 1006.74 [Reserved]

§ 1006.75 Plant location adjustments for producer milk and nonpool milk.

(a) The uniform price for producer milk shall be adjusted according to the location of the plant at which the milk was physically received by subtracting from the price the amount by which the Class I price specified in § 1006.50 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1006.50, the difference shall be added to the uniform price; and

(b) The uniform price applicable for other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted uniform price shall not be less than the lowest announced class price.

§ 1006.76 Payments by a handler operating a partially regulated distributing plant.

See § 1000.76 of this chapter.

§ 1006.77 Adjustment of accounts.

See § 1000.77 of this chapter.

§ 1006.78 Charges on overdue accounts.

See § 1000.78 of this chapter.

Adminstrative Assessment and Marketing Service Deduction

§ 1006.85 Assessment for order administration.

See § 1000.85 of this chapter.

§ 1006.86 Deduction for marketing services.

See § 1000.86 of this chapter.

Subpart—Order Regulating Handling

General Provisions

§ 1007.1 General provisions.

The terms, definitions, and provisions in part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1007.2 Southeast marketing area.

The marketing area means all territory within the bounds of the following states and political subdivisions, including all piers, docks and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State or Federal) reservations, installations, institutions, or other similar establishments if any part

thereof is within any of the listed states or political subdivisions:

Alabama, Arkansas, Louisiana, and Mississippi

All of the States of Alabama, Arkansas, Louisiana, and Mississippi.

Florida Counties

Escambia, Okaloosa, Santa Rosa, and Walton.

Georgia Counties

All of the State of Georgia except for the counties of Catoosa, Chattooga, Dade, Fannin, Murray, Walker, and Whitfield.

Kentucky Counties

Allen, Ballard, Barren, Caldwell, Calloway, Carlisle, Christian, Crittenden, Fulton, Graves, Hickman, Livingston, Logan, Lyon, Marshall, McCracken, Metcalfe, Monroe, Simpson, Todd, Trigg, and Warren.

Missouri Counties

Barry, Barton, Bollinger, Butler, Cape Girardeau, Carter, Cedar, Christian, Crawford, Dade, Dallas, Dent, Douglas, Dunklin, Greene, Howell, Iron, Jasper, Laclede, Lawrence, Madsion, McDonald, Mississippi, New Madrid, Newton, Oregon, Ozark, Pemiscot, Perry, Polk, Pulaski, Reynolds, Ripley, Scott, Shannon, St. Francois, Stoddard, Stone, Taney, Texas, Vernon, Washington, Wayne, Webster, and Wright.

Tennessee Counties

All of the State of Tennessee except for the counties of Anderson, Blount, Bradley, Campbell, Carter, Claiborne, Cocke, Cumberland, Grainger, Greene, Hamblen, Hamilton, Hancock, Hawkins, Jefferson, Johnson, Knox, Loudon, Marion, McMinn, Meigs, Monroe, Morgan, Polk, Rhea, Roane, Scott, Sequatchie, Sevier, Sullivan, Unicoi, Union, and Washington.

§ 1007.3 Route disposition.

See § 1000.3 of this chapter.

§ 1007.4 Plant.

See § 1000.4 of this chapter.

§ 1007.5 Distributing plant.

See § 1000.5 of this chapter.

§ 1007.6 Supply plant.

See § 1000.6 of this chapter.

§ 1007.7 Pool plant.

Pool plant means a plant specified in paragraphs (a) through (d) of this section, or a unit of plants as specified in paragraph (e) of this section, but excluding a plant specified in paragraph (g) of this section. The pooling standards described in paragraphs (a), (c), and (d) of this section are subject to modification pursuant to paragraph (f) of this section:

(a) A distributing plant from which during the month the total route disposition is equal to 50 percent or more of the total quantity of fluid milk products physically received at such plant and route disposition in the marketing area is at least 10 percent of such receipts. Packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the purpose of determining the transferring plant's pool status under this paragraph.

(b) Any distributing plant located in the marketing area which during the month processed a majority of its milk receipts into aseptically packaged fluid milk products. If the plant had no route disposition in the marketing area during the month, the plant operator may request nonpool status for the plant.

(c) A supply plant from which 50 percent of the total quantity of milk that is physically received during the month from dairy farmers and handlers described in § 1000.9(c) is transferred to pool distributing plants.

(d) A plant located within the marketing area that is operated by a cooperative association if pool plant status under this paragraph is requested for such plant by the cooperative association and during the month at least 60 percent of the producer milk of members of such cooperative association is delivered directly from farms to pool distributing plants or is transferred to such plants as a fluid milk product from the cooperative's plant.

(e) Two or more plants operated by the same handler and located within the marketing area may qualify for pool status as a unit by meeting the total and in-area route disposition requirements specified in paragraph (a) of this section and the following additional requirements:

(1) At least one of the plants in the unit must qualify as a pool plant pursuant to paragraph (a) of this section;

(2) Other plants in the unit must process only Class I or Class II products and must be located in a pricing zone providing the same or a lower Class I price than the price applicable at the distributing plant included in the unit pursuant to paragraph (e)(1) of this section; and

(3) A written request to form a unit, or to add or remove plants from a unit, must be filed with the market administrator prior to the first day of the month for which it is to be effective.

(f) The applicable percentages in paragraphs (a), (c), and (d) of this section may be increased or decreased up to 10 percentage points by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested parties if the request is made in writing at least 15 days prior to the date for which the requested revision is desired effective. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

(g) The term pool plant shall not apply to the following plants:

(1) A producer-handler plant;

(2) An exempt plant as defined in § 1000.8(e);

(3) A plant qualified pursuant to paragraph (a) of this section which is not located within any Federal order marketing area, meets the pooling requirements of another Federal order, and has had greater route disposition in such other Federal order marketing area for 3 consecutive months;

(4) A plant qualified pursuant to paragraph (a) of this section which is located in another Federal order marketing area, meets the pooling standards of the other Federal order, and has not had a majority of its route disposition in this marketing area for 3 consecutive months or is locked into pool status under such other Federal order without regard to its route disposition in any other Federal order marketing area; and

(5) A plant qualified pursuant to paragraph (c) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under such other order than are made to plants regulated under this order, or such plant has automatic pooling status under such other order.

§ 1007.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1007.9 Handler.

See § 1000.9 of this chapter.

§ 1007.10 Producer-handler.

Producer-handler means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds per month, unless the person requests that the two be operated as separate entities with the distributing plant regulated under § 1007.7(a) and

VOL 63 ISS 20 JA 30 1998 UMI

the farm operated as a producer under § 1007.12;

(b) Receives no fluid milk products, and acquires no fluid milk products for route disposition, from sources other than own farm production;

(c) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own farm production;

(d) Disposes of no fluid milk products using the distribution system of another handler; and

(e) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled, and the processing, packaging, and distribution operations, are the producer-handler's own enterprise and are operated at the producer-handler's own risk.

§ 1007.11 [Reserved]

§ 1007.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk (or components of milk) is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1007.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1007.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I; and

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order.

§ 1007.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk) and butterfat contained in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of a pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it is picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants;

(c) Diverted by a pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or a handler described in § 1000.9(c) to a nonpool plant, subject to the following conditions:

(1) In any month of January through June, not less than 4 days' production of the producer whose milk is diverted is physically received at a pool plant during the month;

(2) In any month of July through December, not less than 10 days' production of the producer whose milk is diverted is physically received at a pool plant during the month;

(3) The total quantity of milk so diverted during the month by a cooperative association shall not exceed 33 percent during the months of July through December, and 50 percent during the months of January through June, of the producer milk that the cooperative association caused to be delivered to, and physically received at, pool plants during the month;

(4) The operator of a pool plant that is not a cooperative association may divert any milk that is not under the control of a cooperative association that diverts milk during the month pursuant to paragraph (d) of this section. The total quantity of milk so diverted during the month shall not exceed 33 percent during the months of July through December, or 50 percent during the months of January through June, of the producer milk physically received at such plant (or such unit of plants in the case of plants that pool as a unit pursuant to § 1007.7(e)) during the month, excluding the quantity of producer milk received from a handler described in § 1000.9(c);

(5) Any milk diverted in excess of the limits prescribed in paragraphs (d)(3) and (4) of this section shall not be producer milk. If the diverting handler or cooperative association fails to designate the dairy farmers' deliveries that will not be producer milk, no milk diverted by the handler or cooperative association shall be producer milk;

(6) Diverted milk shall be priced at the location of the plant to which diverted; and

(7) The delivery day requirements and the diversion percentages in paragraphs (d)(1) through (4) of this section may be increased or decreased by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested persons. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

§ 1007.14 Other source milk.

See § 1000.14 of this chapter.

§ 1007.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1007.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1007.17 [Reserved]

§ 1007.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1007.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1007.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office receives the report on or before the 7th day after the end of the month, in the detail and on prescribed forms, as follows:

(a) With respect to each of its pool plants, the quantities of skim milk and butterfat contained in or represented by:

(1) Receipts of producer milk, including producer milk diverted by the plant operator to other plants;

(2) Receipts of milk from handlers described in § 1000.9(c);

(3) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(4) Receipts of other source milk;

(5) Receipts of bulk milk from a plant regulated under another Federal order, except Federal Order 1005, for which a transportation credit is requested pursuant to § 1007.82;

(6) Receipts of producer milk described in § 1007.82(c)(2), including the identity of the individual producers whose milk is eligible for the transportation credit pursuant to that paragraph and the date that such milk was received;

(7) For handlers submitting transportation credit requests, transfers of bulk milk to nonpool plants, including the dates that such milk was transferred;

(8) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products; and

(9) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a)(1), (a)(2), (a)(3), (a)(4), and (a)(8) of this section. Receipts of milk that would have been producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler described in § 1000.9(c) shall report:

(1) The quantities of all skim milk and butterfat contained in receipts of milk from producers;

(2) The utilization or disposition of all such receipts; and

(3) With respect to milk for which a cooperative association is requesting a transportation credit pursuant to § 1007.82, all of the information required in paragraph (a)(5), (a)(6), and (a)(7) of this section.

(d) Each handler not specified in paragraphs (a) through (c) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1007.31 Payroll reports.

(a) On or before the 20th day after the end of each month, each handler described in § 1000.9(a) and (c) shall report to the market administrator its producer payroll for the month, in detail prescribed by the market administrator, showing for each producer the information specified in § 1007.73(e).

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1007.32 Other reports.

(a) On or before the 20th day after the end of each month, each handler described in § 1000.9(a) and (c) shall report to the market administrator any adjustments to transportation credit requests as reported pursuant to § 1007.30(a)(5), (6), and (7).

(b) In addition to the reports required pursuant to §§ 1007.30, 31, and 32(a), each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1007.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1007.41 [Reserved]

§ 1007.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1007.43 General classification rules.

See § 1000.43 of this chapter.

§ 1007.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1007.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1007.50 Class prices, component prices, Class I differential and price.

Class prices and component prices are described in § 1000.50. The Class I differential shall be the differential established for Fulton County, Georgia, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Fulton County, Georgia.

§ 1007.51 [Reserved]

§ 1007.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1007.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1007.54 Equivalent price.

See § 1000.54 of this chapter.

Uniform Price

§ 1007.60 Handler's value of milk.

For the purpose of computing the uniform price, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) as follows:

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) by the applicable skim milk and butterfat prices, and add the resulting amounts;

(b) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(c) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(d) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(e) Add the amount obtained from multiplying the Class I price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(f) Subtract, for reconstituted milk made from receipts of nonfluid milk

VOL
63
ISS
20
JA
30
1998
UMI

products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I use pursuant to § 1000.43(e); and

(g) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(5) or (c).

§ 1007.61 Computation of uniform price, uniform butterfat price and uniform skim milk price.

(a) *Uniform price.* For each month the market administrator shall compute the uniform price per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1007.71 for the preceding month shall not be included in the computation of the uniform price. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the uniform price in the following manner:

(1) Combine into one total the values computed pursuant to § 1007.60 for all handlers required to file reports prescribed in § 1007.30;

(2) Add an amount equal to the sum of the location adjustments computed pursuant to § 1007.75;

(3) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(4) Add or subtract, as the case may be, to obtain an all-producer milk test of 3.5 percent butterfat, the value of the required pounds of butterfat times the uniform butterfat price computed in paragraph (b) of this section;

(5) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(i) The total hundredweight of producer milk; and

(ii) The total hundredweight for which a value is computed pursuant to § 1007.60(f); and

(6) Subtract not less than 4 cents not more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result, rounded to the nearest cent, shall be known as the "uniform price" for the month.

(b) *Uniform butterfat price.* The uniform butterfat price per pound, rounded to the nearest one-hundredth cent, shall be obtained by multiplying the pounds of butterfat in producer milk allocated to each class pursuant to § 1000.44(b) by the respective class butterfat prices (Class I butterfat price for Class I and the butterfat price for all other classes) and dividing the sum of such values by the total pounds of such butterfat.

(c) *Uniform skim milk price.* The uniform skim milk price per hundredweight, rounded to the nearest cent, shall be the uniform price for the month pursuant to paragraph (a) of this section less the uniform butterfat price for the month pursuant to paragraph (b) of this section multiplied by 3.5 pounds of butterfat, with the result divided by .965.

§ 1007.62 Announcement of uniform price, uniform butterfat price and uniform skim milk price.

On or before the 11th day after the end of the month, the market administrator shall announce the following prices and information:

(a) The uniform price pursuant to § 1007.61 for such month;

(b) The uniform butterfat price pursuant to § 1007.61(b) for such month; and

(c) The uniform skim milk price pursuant to § 1007.61(c) for such month.

Payments for Milk

§ 1007.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1007.71 Payments to the producer-settlement fund.

The payments to the producer-settlement fund specified in § 1000.71 are due no later than the 12th day after the end of the month.

§ 1007.72 Payments from the producer-settlement fund.

See § 1000.72 of this chapter.

§ 1007.73 Payments to producers and to cooperative associations.

(a) Each pool plant operator that is not paying a cooperative association for producer milk shall pay each producer as follows:

(1) *Partial payment.* For each producer who has not discontinued shipments as of the 23rd day of the month, payment shall be made so that it is received by the producer on or before the 26th day of the month for milk received during the first 15 days of the month at not less than the 90 percent of the preceding month's uniform price, adjusted for plant location pursuant to § 1007.75 and proper deductions authorized in writing by the producer;

(2) *Final payment.* For milk received during the month, payment shall be made so that it is received by each producer one day after the payment date required in § 1000.72 an amount computed as follows:

(i) Multiply the hundredweight of producer milk received times the uniform price for the month as adjusted pursuant to § 1007.75;

(ii) Multiply the hundredweight of producer skim milk received times the uniform skim milk price for the month;

(iii) Multiply the pounds of butterfat received times the uniform butterfat price for the month;

(iv) Add the amounts computed in paragraph (a)(2)(i), (ii), and (iii) of the section, and from that sum:

(A) Subtract the partial payment made pursuant to paragraph (a)(1) of this section;

(B) Subtract the deduction for marketing services pursuant to § 1000.86;

(C) Add or subtract for errors made in previous payments to the producer; and

(D) Subtract proper deductions authorized in writing by the producer.

(b) One day before partial and final payments are due pursuant to paragraph (a) of this section, each pool plant operator shall pay a cooperative association for milk received as follows:

(1) *Partial payment to a cooperative association.* For bulk milk/skimmed milk received during the first 15 days of the month from a cooperative association in any capacity, except as the operator of a pool plant, the payment shall be equal to the hundredweight of milk received multiplied by 90 percent of the preceding month's uniform price, adjusted for plant location pursuant to § 1007.75;

(2) *Partial payment to a cooperative association for milk transferred from its pool plant.* For bulk fluid milk products and bulk fluid cream products received during the first 15 days of the month from a cooperative association in its capacity as the operator of a pool plant, the partial payment shall be at the pool plant operator's estimated use value of the milk using the most recent class prices available, adjusted for butterfat value and plant location;

(3) *Final payment to a cooperative association for milk transferred from its pool plant.* For bulk fluid milk products and bulk fluid cream products received during the month from a cooperative association in its capacity as the operator of a pool plant, the final payment shall be the classified value of such milk as determined by multiplying the pounds of milk assigned to each class pursuant to § 1000.44 by the class prices for the month, adjusted for plant location and butterfat value, and subtracting from this sum the partial payment made pursuant to paragraph (b)(2) of this section.

(4) *Final payment to a cooperative association for bulk milk received directly from producers' farms.* For bulk milk received from a cooperative association during the month, including the milk of producers who are not members of such association and who the market administrator determines have authorized the cooperative association to collect payment for their milk, the final payment for such milk shall be an amount equal to the sum of the individual payments otherwise payable for such milk pursuant to paragraph (a)(2) of this section.

(c) If a handler has not received full payment from the market administrator pursuant to § 1007.72 by the payment date specified in paragraph (a) or (b) of this section, the handler may reduce payments pursuant to paragraphs (a) and (b) of this section, but by not more than the amount of the underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(d) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund, and in the event that the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant as the case may be.

(e) In making payments to producers pursuant to this section, each pool plant operator shall furnish each producer, except a producer whose milk was received from a handler described in § 1000.9 (a) or (c), a supporting statement in such form that it may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and the payroll number of the producer;

(2) The month and dates that milk was received from the producer, including the daily and total pounds of milk received;

(3) The total pounds of butterfat in the producer's milk;

(4) The minimum rate at which payment to the producer is required pursuant to this order;

(5) The rate used in making payment if the rate is other than the applicable minimum rate;

(6) The amount, or rate per hundredweight, and nature of each deduction claimed by the handler; and

(7) The net amount of payment to the producer or cooperative association.

§ 1007.74 [Reserved]

§ 1007.75 Plant location adjustments for producer milk and nonpool milk.

(a) The uniform price for producer milk shall be adjusted according to the location of the plant at which the milk was physically received by subtracting from the price the amount by which the Class I price specified in § 1007.50 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1007.50, the difference shall be added to the uniform price; and

(b) The uniform price applicable for other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted uniform price shall not be less than the lowest announced class price.

§ 1007.76 Payments by a handler operating a partially regulated distributing plant.

See § 1000.76 of this chapter.

§ 1007.77 Adjustment of accounts.

See § 1000.77 of this chapter.

§ 1007.78 Charges on overdue accounts.

See § 1000.78 of this chapter.

Marketwide Service Payments

§ 1007.80 Transportation credit balancing fund.

The market administrator shall maintain a separate fund known as the *Transportation Credit Balancing Fund* into which shall be deposited the payments made by handlers pursuant to § 1007.81 and out of which shall be made the payments due handlers pursuant to § 1007.82. Payments due a handler shall be offset against payments due from the handler.

§ 1007.81 Payments to the transportation credit balancing fund.

(a) On or before the 12th day after the end of the month, each handler operating a pool plant and each handler specified in § 1000.9 (a) and (c) shall pay to the market administrator a transportation credit balancing fund assessment determined by multiplying the pounds of Class I producer milk assigned pursuant to § 1000.44 by $0.07 per hundredweight or such lesser amount as the market administrator deems necessary to maintain a balance in the fund equal to the total transportation credits disbursed during the prior June–January period. In the event that during any month of the June–January period the fund balance is insufficient to cover the amount of credits that are due, the assessment should be based upon the amount of credits that would have been disbursed had the fund balance been sufficient.

(b) The market administrator shall announce publicly on or before the 5th day of the month the assessment pursuant to paragraph (a) of this section for the following month.

§ 1007.82 Payments from the transportation credit balancing fund.

(a) Payments from the transportation credit balancing fund to handlers and cooperative associations requesting transportation credits shall be made as follows:

(1) On or before the 13th day after the end of each of the months of July through December and any other month in which transportation credits are in effect pursuant to paragraph (b) of this section, the market administrator shall pay to each handler that received, and reported pursuant to § 1007.30(a)(5), bulk milk transferred from a plant fully regulated under another Federal order as described in paragraph (c)(1) of this section or that received, and reported pursuant to § 1007.30(a)(6), milk directly from producers' farms as specified in paragraph (c)(2) of this section, a preliminary amount determined pursuant to paragraph (d) of this section to the extent that funds are available in the transportation credit balancing fund. If an insufficient balance exists to pay all of the credits computed pursuant to this section, the market administrator shall distribute the balance available in the transportation credit balancing fund by reducing payments prorata using the percentage derived by dividing the balance in the fund by the total credits that are due for the month. The amount of credits resulting from this initial proration shall be subject to audit adjustment pursuant to paragraph (a)(2) of this section;

(2) The market administrator shall accept adjusted requests for transportation credits on or before the 20th day of the month following the month for which such credits were requested pursuant to § 1007.32(a). After

VOL 63 ISS 20 JA 30 1998 UMI

such date, a preliminary audit will be conducted by the market administrator, who will recalculate any necessary proration of transportation credit payments for the preceding month pursuant to paragraph (a) of this section. Handlers will be promptly notified of an overpayment of credits based upon this final computation and remedial payments to or from the transportation credit balancing fund will be made on or before the next payment date for the following month;

(3) Transportation credits paid pursuant to paragraphs (a)(1) and (2) of this section shall be subject to final verification by the market administrator pursuant to § 1000.77. Adjusted payments to or from the transportation credit balancing fund will remain subject to the final proration established pursuant to paragraph (a)(2) of this section; and

(4) In the event that a qualified cooperative association is the responsible party for whose account such milk is received and written documentation of this fact is provided to the market administrator pursuant to § 1007.30(c)(3) prior to the date payment is due, the transportation credits for such milk computed pursuant to this section shall be made to such cooperative association rather than to the operator of the pool plant at which the milk was received.

(b) The market administrator may extend the period during which transportation credits are in effect (*i.e.*, the transportation credit period) to the months of January and June if a written request to do so is received 15 days prior to the beginning of the month for which the request is made and, after conducting an independent investigation, finds that such extension is necessary to assure the market of an adequate supply of milk for fluid use. Before making such a finding, the market administrator shall notify the Director of the Dairy Division and all handlers in the market that an extension is being considered and invite written data, views, and arguments. Any decision to extend the transportation credit period must be issued in writing prior to the first day of the month for which the extension is to be effective.

(c) Transportation credits shall apply to the following milk:

(1) Bulk milk received from a plant regulated under another Federal order, except Federal Orders 1005, and allocated to Class I milk pursuant to § 1000.44(a)(12); and

(2) Bulk milk received directly from the farms of dairy farmers at pool distributing plants subject to the following conditions:

(i) The quantity of such milk that shall be eligible for the transportation credit shall be determined by multiplying the total pounds of milk received from producers meeting the conditions of this paragraph by the lower of:

(A) The marketwide estimated Class I utilization of all handlers for the month pursuant to § 1000.45(a); or

(B) The Class I utilization of all producer milk of the pool plant operator receiving the milk after the computations described in § 1000.44;

(ii) The dairy farmer was not a "producer" under this order during more than 2 of the immediately preceding months of January through June and not more than 50 percent of the production of the dairy farmer during those 2 months, in aggregate, was received as producer milk under this order during those 2 months. However, if January and/or June are months in which transportation credits are disbursed pursuant to paragraph (a) of this section, these months shall not be included in the 2-month limit provided in this paragraph; and

(iii) The farm on which the milk was produced is not located within the specified marketing area of this order or the marketing area of Federal Order 1005.

(d) Transportation credits shall be computed as follows:

(1) The market administrator shall subtract from the pounds of milk described in paragraphs (c)(1) and (2) of this section the pounds of bulk milk transferred from the pool plant receiving the supplemental milk if milk was transferred to a nonpool plant on the same calendar day that the supplemental milk was received. For this purpose, the transferred milk shall be subtracted from the most distant load of supplemental milk received, and then in sequence with the next most distant load until all of the transfers have been offset;

(2) With respect to the pounds of milk described in paragraph (c)(1) of this section that remain after the computations described in paragraph (d)(1) of this section, the market administrator shall:

(i) Determine the shortest hard-surface highway distance between the shipping plant and the receiving plant;

(ii) Multiply the number of miles so determined by 0.35 cent;

(iii) Subtract the other order's Class I price applicable at the shipping plant's location from the Class I price applicable at the receiving plant as specified in § 1007.53;

(iv) Subtract any positive difference computed in paragraph (d)(2)(iii) of this section from the amount computed in paragraph (d)(2)(ii) of this section; and

(v) Multiply the remainder computed in paragraph (d)(2)(iv) of this section by the hundredweight of milk described in paragraph (d)(2) of this section.

(3) For the remaining milk described in paragraph (c)(2) of this section after computations described in paragraph (d)(1) of this section, the market administrator shall:

(i) Determine an origination point for each load of milk by locating the nearest city to the last producer's farm from which milk was picked up for delivery to the receiving pool plant. Alternatively, the milk hauler that is transporting the milk of producers described in paragraph (c)(2) of this section may establish an origination point following the last farm pickup by stopping at the nearest independently-operated truck stop with a certified truck scale and obtaining a weight certificate indicating the weight of the truck and its contents, the date and time of weighing, and the location of the truck stop;

(ii) Determine the shortest hard-surface highway distance between the receiving pool plant and the truck stop or city, as the case may be;

(iii) Subtract 85 miles from the mileage so determined;

(iv) Multiply the remaining miles so computed by 0.35 cent;

(v) If the origination point determined pursuant to paragraph (d)(3)(i) of this section is in a Federal order marketing area, subtract the Class I price applicable at the origination point pursuant to the provisions of such other order (as if the origination point were a plant location) from the Class I price applicable at the distributing plant receiving the milk. If the origination point is not in any Federal order marketing area, determine the Class I price at the origination point based upon the provisions of this order and subtract this price from the Class I price applicable at the distributing plant receiving the milk;

(vi) Subtract any positive difference computed in paragraph (d)(3)(v) of this section from the amount computed in paragraph (d)(3)(iv) of this section; and

(vii) Multiply the remainder computed in paragraph (d)(3)(vi) by the hundredweight of milk described in paragraph (d)(3) of this section.

Administrative Assessment and Marketing Service Deduction

§ 1007.85 Assessment for order administration.

Subpart—Order Regulating Handling

General Provisions

§ 1030.1 General provisions.

The terms, definitions, and provisions in Part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1030.2 Upper Midwest marketing area.

The marketing area means all territory within the bounds of the following states and political subdivisions, including all piers, docks, and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State, or Federal) reservations, installations, institutions, or other similar establishments if any part thereof is within any of the listed states or political subdivisions:

Illinois Counties

Boone, Carroll, Cook, De Kalb, Du Page, Jo Daviess (except the city of East Dubuque), Kane, Kendall, Lake, Lee, McHenry, Ogle, Stephenson, Whiteside (the townships of Caloma, Hahnaman, Hopkins, Hume, Jordan, Montmorency, Sterling, and Tampico only), Will, and Winnebago.

Iowa Counties

Howard, Kossuth, Mitchell (except the city of Osage), Winnebago, Winneshiek, and Worth.

Michigan Counties

Delta, Dickinson, Gogebic, Iron, Menominee, and Ontonagon.

Minnesota

All counties except Lincoln, Nobles, Pipestone, and Rock.

North Dakota Counties

Barnes, Cass, Cavalier, Dickey, Grand Forks, Griggs, La Moure, Nelson, Pembina, Ramsey, Ransom, Richland, Sargent, Steele, Traill, and Walsh.

South Dakota Counties

Brown, Day, Edmunds, Grant, Marshall, McPherson, Roberts, and Walworth.

Wisconsin Counties

All counties except Crawford and Grant.

§ 1030.3 Route disposition.

See § 1000.3 of this chapter.

§ 1030.4 Plant.

See § 1000.4 of this chapter.

§ 1030.5 Distributing plant.

See § 1000.5 of this chapter.

§ 1000.6 Supply plant.

See § 1000.6 of this chapter.

§ 1030.7 Pool plant.

Pool plant means a plant, unit of plants, or a system of plants as specified in paragraphs (a) through (f) of this section. The pooling standards described in paragraphs (a), (c), (d), (e), and (f) of this section are subject to modification pursuant to paragraph (g) of this section:

(a) A distributing plant from which during the month:

(1) Total route disposition is equal to 15 percent of more of the total quantity of bulk fluid milk products physically received at the plant;

(2) Route disposition in the marketing area is at least 15 percent of total route disposition; and

(3) For purposes of this section, packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the single purpose of qualifying the transferring plant as a pool distributing plant.

(b) A distributing plant located in the marketing area at which the majority of milk received is processed into aseptically packaged fluid milk products unless there are no sales from the plant into any marketing area and the plant operator in writing requests nonpool plant status for the plant for the month.

(c) A supply plant from which the quantity of bulk fluid milk products shipped to, received at, and physically unloaded into plants described in paragraph (a) or (b) of this section as a percent of the Grade A milk received at the plant from dairy farmers (except dairy farmers described in § 1030.12(b)) and handlers described in § 1000.9(c), as reported in § 1030.30(a), is not less than 10 percent of the milk received from dairy farmers, including milk diverted pursuant to § 1030.13, subject to the following conditions:

(1) Qualifying shipments pursuant to this paragraph may be made to the following plants, except whenever the authority provided in paragraph (g) of this section is applied to increase the shipping requirements specified in this section, only shipments to pool plants described in § 1030.7(a) and (b), and units described in § 1030.7(e) shall count as qualifying shipments for the purpose of meeting the increased shipments:

VOL
63
ISS
20
JA
30
1998
UMI

(i) Pool plants described in § 1030.7(a), (b) and (e);
(ii) Plants of producer-handlers;
(iii) Partially regulated distributing plants, except that credit for such shipments shall be limited to the amount of such milk classified as Class I at the transferee plant; and
(iv) Distributing plants fully regulated under other Federal orders, except that credit for shipments to such plants shall be limited to the quantity shipped to pool distributing plants during the month and credits for shipments to other order plants shall not include any such shipments made on the basis of agreed-upon Class II, Class III, or Class IV utilization.

(2) The operator of a supply plant may include as qualifying shipments deliveries to pool distributing plants and deliveries to plants described in § 1030.7(e) directly from farms of producers pursuant to § 1030.13(c).

(d) [Reserved]

(e) Two or more plants operated by the same handler and located in the marketing area may qualify for pool status as a unit by meeting the total and in-area route disposition requirements of a pool distributing plant specified in paragraph (a) of this section and subject to the following additional requirements:

(1) At least one of the plants in the unit must qualify as a pool plant pursuant to paragraph (a) of this section;

(2) Other plants in the unit must process Class I or Class II products, using 50 percent or more of the total Grade A fluid milk products received in bulk form at such plant or diverted therefrom by the plant operator in Class I or Class II products; and

(3) The operator of the unit has filed a written request with the market administrator prior to the first day of the month for which such status is desired to be effective. The unit shall continue from month-to-month thereafter without further notification. The handler shall notify the market administrator in writing prior to the first day of any month for which termination or any change of the unit is desired.

(f) A system of supply plants may be qualified for pooling by the association of two or more supply plants operated by one or more handlers by meeting the applicable percentage requirements of paragraph (c) of this section in the same manner as a single plant and subject to the following additional requirements:

(1) Each plant in the system is located within the marketing area, or was a pool supply plant pursuant to § 1068.7(b) for each of the three months immediately preceding the effective date of this paragraph so long as it continues to maintain pool status. Cooperative associations may not use shipments pursuant to § 1000.9(c) to qualify plants located outside the marketing area;

(2) The handler(s) establishing the system submits a written request to the market administrator on or before July 15 requesting that such plants qualify as a system for the period of August through July of the following year. Such request will contain a list of the plants participating in the system in the order, beginning with the last plant, in which the plants will be dropped from the system if the system fails to qualify. Each plant that qualifies as a pool plant within a system shall continue each month as a plant in the system through the following July unless the handler(s) establishing the system submits a written request to the market administrator that the plant be deleted from the system or that the system be discontinued. Any plant that has been so deleted from a system, or that has failed to qualify in any month, will not be part of any system for the remaining months through July. The handler(s) that established a system may add a plant operated by such handler(s) to a system, if such plant has been a pool plant each of the six prior months and would otherwise be eligible to be in a system, upon written request to the market administrator no later than the 15th day of the prior month. In the event of an ownership change or business failure of a handler that is a participant in a system, the system may be reorganized to reflect such changes by submitting a written request to file a new marketing agreement with the market administrator; and

(3) If a system fails to qualify under the requirements of this paragraph, the handler responsible for qualifying the system shall notify the market administrator which plant or plants will be deleted from the system so that the remaining plants may be pooled as a system. If the handler fails to do so, the market administrator shall exclude one or more plants, beginning at the bottom of the list of plants in the system and continuing up the list as necessary until the deliveries are sufficient to qualify the remaining plants in the system.

(g) The performance standards of paragraphs (a), (c), (d), (e) and (f) of this section may be increased or decreased, for part or all of the marketing area, by the market administrator if found necessary to obtain needed shipments or to prevent uneconomic shipments. Before making a finding that a change is necessary the market administrator shall investigate the need for revision, either on such person's own initiative or at the request of interested persons. If such investigation shows that a revision might be appropriate, a notice shall be issued stating that a revision is being considered and inviting data, views, and arguments. If the market administrator determines that an adjustment to the shipping percentages is necessary, the market administrator shall notify the industry within one day of the effective date of such adjustment:

(h) The term pool plant shall not apply to the following plants:

(1) A producer-handler as defined under any Federal order;

(2) An exempt plant as defined in § 1000.8(e);

(3) A plant located within the marketing area and qualified pursuant to paragraph (a) or (e) of this section which meets the pooling requirements of another Federal order, and from which more than 50 percent of its route disposition has been in the other Federal order marketing area for three consecutive months;

(4) A plant located outside the marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of another Federal order and has had greater sales in such other Federal order's marketing area for 3 consecutive months;

(5) A plant located in another Federal order marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of such other Federal order and does not have a majority of its route distribution in this marketing area for 3 consecutive months or if the plant is required to be regulated under such other Federal order without regard to its route disposition in any other Federal order marketing area;

(6) A plant qualified pursuant to paragraph (c) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under the other Federal order than are made to plants regulated under this order, or the plant has automatic pooling status under the other Federal order; and

(7) That portion of a regulated plant designated as a nonpool plant that is physically separate and operated separately from the pool portion of such plant. The designation of a portion of a regulated plant as a nonpool plant must be requested in advance and in writing by the handler and must be approved by the market administrator.

(i) Any plant that qualifies as a pool plant in each of the immediately preceding three months pursuant to paragraph (a) of this section or the shipping percentages in paragraph (c) of this section that is unable to meet such performance standards for the current month because of unavoidable circumstances determined by the market administrator to be beyond the control of the handler operating the plant, such as a natural disaster (ice storm, wind storm, flood), fire, breakdown of equipment, or work stoppage, shall be considered to have met the minimum performance standards during the period of such unavoidable circumstances, but such relief shall not be granted for more than two consecutive months.

§ 1030.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1030.9 Handler.

See § 1000.9 of this chapter.

§ 1030.10 Producer-handler.

Except as provided in paragraph (g) of this section, *producer-handler* means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds during the month;

(b) Receives no fluid milk products from sources other than own farm production, pool handlers, and plants fully regulated under another Federal order;

(c) Receives at its plant or acquires for route disposition no more than 150,000 pounds of fluid milk products from handlers fully regulated under any Federal order. This limitation shall not apply if the producer-handler's own farm production is less than 150,000 pounds during the month.

(d) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own farm production or pool handlers;

(e) Disposes of no fluid milk products using the distribution system of another handler except for direct deliveries to retail outlets or to a pool handler's plant;

(f) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled (excluding receipts from handlers fully regulated under any Federal order) and the processing, packaging, and distribution operations are the producer-handler's own enterprise and at its own risk; and

(g) Producer-handler shall not include any producer who also operates a distributing plant if the producer-handler so requests that the two be operated as separate entities with the distributing plant regulated under § 1030.7(a) and the farm operated as a producer under § 1030.12.

§ 1030.11 [Reserved]

§ 1030.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1030.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1030.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I; and

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order.

§ 1030.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk), including nonfat components, and butterfat in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of a pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it is picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants;

(c) Diverted by a pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or a cooperative association described in § 1000.9(c) to a nonpool plant, subject to the following conditions:

(1) Milk of a dairy farmer shall not be eligible for diversion unless at least one day's production of such dairy farmer is physically received as producer milk at a pool plant during the first month the dairy farmer is a producer. If a dairy farmer loses producer status under this order (except as a result of a temporary loss of Grade A approval or as a result of the handler of the dairy farmer's milk failing to pool the milk under any order), the dairy farmer's milk shall not be eligible for diversion unless at least one day's production of the dairy farmer has been physically received as producer milk at a pool plant during the first month the dairy farmer is re-associated with the market;

(2) The quantity of milk delivered to plants described in § 1030.7(c)(1) as a percentage of the total milk accounted for by the cooperative association described in § 1000.9(c) must be at least 10 percent, subject to § 1030.7(g);

(3) Diverted milk shall be priced at the location of the plant to which diverted.

§ 1030.14 Other source milk.

See § 1000.14 of this chapter.

§ 1030.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1030.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1030.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1030.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1030.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office receives the report on or before the 9th day after the end of the month, in the detail and on the prescribed forms, as follows:

(a) Each handler that operates a pool plant pursuant to § 1030.7 and each handler described in § 1000.9(c) shall report for each of its operations the following information:

(1) Product pounds, pounds of butterfat, pounds of protein, pounds of solids-not-fat other than protein (other solids), and the value of the somatic cell adjustment pursuant to § 1000.50(p), contained in or represented by:

VOL 63 ISS 20 JA 30 1998 UMI

(i) Receipts of producer milk, including producer milk diverted by the handler; and

(ii) Receipts of milk from handlers described in § 1000.9(c);

(2) Product pounds and pounds of butterfat contained in:

(i) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(ii) Receipts of other source milk; and

(iii) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products;

(3) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph; and

(4) Such other information with respect to the receipts and utilization of skim milk, butterfat, milk protein, other nonfat solids, and somatic cell information, as the market administrator may prescribe.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler not specified in paragraphs (a) and (b) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1030.31 Payroll reports.

(a) On or before the 22nd day after the end of each month, each handler that operates a pool plant pursuant to § 1030.7 and each handler described in § 1000.9(c) shall report to the market administrator its producer payroll for the month, in the detail prescribed by the market administrator, showing for each producer the information described in § 1030.73(f).

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1030.32 Other reports.

In addition to the reports required pursuant to §§ 1030.30 and 1030.31, each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1030.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1030.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1000.43 General classification rules.

See § 1000.43 of this chapter.

§ 1000.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1000.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1030.50 Class prices and component prices.

See § 1000.50 of this chapter.

§ 1030.51 Class I differential and price.

The Class I differential shall be the differential established for Cook County, Illinois, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Cook County, Illinois.

§ 1030.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1030.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1030.54 Equivalent price.

See § 1000.54 of this chapter.

§ 1030.55 Transfer credits and assembly credits on Class I milk.

(a) For bulk milk transferred from a pool plant to a pool distributing plant, and which is classified as Class I milk, the shipping handler shall receive a transportation credit computed by multiplying the pounds of Class I milk by the product of .0028 times the number of miles between the transferor plant and the transferee plant.

(b) For each handler who transfers or diverts bulk fluid milk from a pool plant to a pool distributing plant a procurement credit shall be determined by multiplying the hundredweight of milk classified as Class I at the pool plant by 8 cents.

(c) For each handler described in § 1000.9(c), a procurement credit for bulk fluid milk received as producer milk at a pool distributing plant shall be determined by prorating the producer milk classified as Class I at the pool distributing plant, and multiplying by 8 cents per hundredweight.

(d) For each handler operating a pool distributing plant pursuant to § 1030.7(a) or (b), a procurement credit for bulk fluid milk received shall be calculated by multiplying the producer milk classified as Class I at the pool distributing plant by 8 cents per hundredweight.

(e) For purposes of this section, the distances to be computed shall be determined by the market administrator using the shortest available state and/or Federal highway mileage. Mileage determinations are subject to redetermination at all times. In the event a handler requests a redetermination of the mileage pertaining to any plant, the market administrator shall notify the handler of such redetermination within 30 days after the receipt of such request. Any financial obligations resulting from a change in mileage shall not be retroactive for any periods prior to the redetermination by the market administrator.

Producer Price Differential

§ 1030.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of its pool plants, and of each handler described in § 1000.9(c) as follows:

(a) Class I value.

(1) Multiply the hundredweight of skim milk in Class I as determined pursuant to § 1000.44(a) by the Class I skim milk price applicable at the handler's location; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class I as determined pursuant to § 1000.44(b) by the Class I butterfat price applicable at the handler's location.

(b) Add the Class II value, computed as follows:

(1) Multiply the hundredweight of skim milk in Class II as determined pursuant to § 1000.44(a) by 70 cents;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class II as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price;

(3) Add an amount obtained by multiplying the pounds of butterfat in Class II as determined pursuant to § 1000.44(b) by the butterfat price;

(c) Add the Class III value computed as follows:

(1) Multiply the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average protein content of producer skim milk received by the handler, and multiply the resulting pounds of protein by the protein price;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average other solids content of producer skim milk received by the handler, and multiply the resulting pounds of other solids by the other solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class III as determined pursuant to § 1000.44(b) by the butterfat price;

(d) Add the Class IV value computed as follows:

(1) Multiply the pounds of skim milk in Class IV as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class IV as determined pursuant to § 1000.44(b) by the butterfat price;

(e) Add an adjustment for somatic cell content of producer milk determined by multiplying the value reported pursuant to § 1030.30(a)(1) by the percentage of the total producer milk allocated to Class II, Class III, and Class IV pursuant to § 1000.44(c);

(f) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(g) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(h) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(i) Add the amount obtained from multiplying the difference between the Class I price and the Class III price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of bulk fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(j) Subtract an amount equal to any credits applicable pursuant to § 1030.55;

(k) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I pursuant to § 1000.43(d); and

(l) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another order under § 1000.76(a)(5) or (c).

§ 1030.61 Computation of producer price differential.

For each month the market administrator shall compute a producer price differential per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1030.71 for the preceding month shall not be included in the computation of the producer price differential. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the producer price differential in the following manner:

(a) Combine into one total the values computed pursuant to § 1030.60 for all handlers required to file reports prescribed in § 1030.30;

(b) Subtract the total values obtained by multiplying each handler's total pounds of protein, other solids, and butterfat contained in the milk for which an obligation was computed pursuant to § 1030.60 by the protein price, the other solids price, and the butterfat price, respectively, and the total value of the somatic cell adjustment pursuant to § 1030.30(a)(1);

(c) Add an amount equal to the sum of the location adjustments computed pursuant to § 1030.75;

(d) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(e) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(1) The total hundredweight of producer milk; and

(2) The total hundredweight for which a value is computed pursuant to § 1030.60(i); and

(f) Subtract not less than 4 cents nor more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result shall be known as the *producer price differential* for the month.

§ 1030.62 Announcement of producer prices.

On or before the 13th day after the end of each month, the market administrator shall announce publicly the following prices and information:

(a) The producer price differential;

(b) The protein price;

(c) The other solids price;

(d) The butterfat price;

(e) The somatic cell adjustment rate;

(f) The average butterfat, protein and other solids content of producer milk; and

(g) The statistical uniform price for milk containing 3.5 percent butterfat, computed by combining the Class III price and the producer price differential.

Payments for Milk

§ 1030.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1030.71 Payments to the producer-settlement fund.

Each handler shall make payment to the producer-settlement fund in a manner that provides receipt of the

VOL 63 ISS 20 JA 30 1998 UMI

funds by the market administrator no later than the 15th day after the end of the month. Payment shall be the amount, if any, by which the amount specified in (a) of this section exceeds the amount specified in (b) of this section:

(a) The total value of milk to the handler for the month as determined pursuant to § 1030.60.

(b) The sum of:

(1) An amount obtained by multiplying the total hundredweight of producer milk as determined pursuant to § 1000.44(c) by the producer price differential as adjusted pursuant to § 1030.75;

(2) An amount obtained by multiplying the total pounds of protein, other solids, and butterfat contained in producer milk by the protein, other solids, and butterfat prices respectively;

(3) The total value of the somatic cell adjustment to producer milk; and

(4) An amount obtained by multiplying the pounds of skim milk and butterfat for which a value was computed pursuant to § 1030.60(i) by the producer price differential as adjusted pursuant to § 1030.75 for the location of the plant from which received.

§ 1030.72 Payments from the producer-settlement fund.

No later than the 16th day after the end of each month, the market administrator shall pay to each handler the amount, if any, by which the amount computed pursuant to § 1030.71(b) exceeds the amount computed pursuant to § 1030.71(a). If, at such time, the balance in the producer-settlement fund is insufficient to make all payments pursuant to this section, the market administrator shall reduce uniformly such payments and shall complete the payments as soon as the funds are available.

§ 1030.73 Payments to producers and to cooperative associations.

(a) Each handler shall pay each producer for producer milk for which payment is not made to a cooperative association pursuant to paragraph (b) of this section, as follows:

(1) *Partial payment.* For each producer who has not discontinued shipments as of the date of this partial payment, payment shall be made so that it is received by each producer on or before the 26th day of the month for milk received during the first 15 days of the month from the producer at not less than the lowest announced class price for the preceding month, less proper deductions authorized in writing by the producer; and

(2) *Final payment.* For milk received during the month, payment shall be made so that it is received by each producer no later than the 17th day after the end of the month in an amount equal to not less than the sum of:

(i) The hundredweight of producer milk received times the producer price differential for the month as adjusted pursuant to § 1030.75;

(ii) The pounds of butterfat received times the butterfat price for the month;

(iii) The pounds of protein received times the protein price for the month;

(iv) The pounds of other solids received times the other solids price for the month;

(v) The hundredweight of milk received times the somatic cell adjustment for the month;

(vi) Less any payment made pursuant to paragraph (a)(1) of this section;

(vii) Less proper deductions authorized in writing by such producer and plus or minus adjustments for errors in previous payments to such producer; and

(viii) Less deductions for marketing services pursuant to § 1000.86.

(b) *Payments for milk received from cooperative association members.* On or before the day prior to the dates specified in paragraphs (a)(1) and (a)(2) of this section, each handler shall pay to a cooperative association for milk from producers who market their milk through the cooperative association and who have authorized the cooperative to collect such payments on their behalf an amount equal to the sum of the individual payments otherwise payable for such producer milk pursuant to paragraphs (a)(1) and (a)(2) of this section.

(c) *Payment for milk received from cooperative association pool plants or from cooperatives as handlers pursuant to § 1000.9(c).* On or before the day prior to the dates specified in paragraph (a)(1) and (a)(2) of this section, each handler who receives fluid milk products at its plant from a cooperative association in its capacity as the operator of a pool plant or who receives milk from a cooperative association in its capacity as a handler pursuant to § 1000.9(c), including the milk of producers who are not members of such association and who the market administrator determines have authorized the cooperative association to collect payment for their milk, shall pay the cooperative for such milk as follows:

(1) For bulk fluid milk products and bulk fluid cream products received from a cooperative association in its capacity as the operator of a pool plant and for milk received from a cooperative association in its capacity as a handler pursuant to § 1000.9(c) during the first 15 days of the month, at not less than the lowest announced class price per hundredweight for the preceding month;

(2) For the total quantity of bulk fluid milk products and bulk fluid cream products received from a cooperative association in its capacity as the operator of a pool plant, at not less than the total value of such products received from the association's pool plants, as determined by multiplying the respective quantities assigned to each class under § 1000.44, as follows:

(i) The hundredweight of Class I skim milk times the Class I skim milk price for the month plus the pounds of Class I butterfat times the Class I butterfat price for the month. The Class I price to be used shall be that price effective at the location of the shipping plant;

(ii) The hundredweight of Class II skim milk times $ .70;

(iii) The pounds of nonfat solids received in Class II and Class IV milk times the nonfat solids price for the month;

(iv) The pounds of butterfat received in Class II, Class III, and Class IV milk times the butterfat price for the month;

(v) The pounds of protein received in Class III milk times the protein price for the month;

(vi) The pounds of other solids received in Class III milk times the other solids price for the month;

(vii) The hundredweight of Class II, Class III, and Class IV milk received times the somatic cell adjustment; and

(viii) Add together the amounts computed in paragraphs (c)(2)(i) through (vii) of this section and from that sum deduct any payment made pursuant to paragraph (c)(1) of this section.

(3) For the total quantity of milk received during the month from a cooperative association in its capacity as a handler under § 1000.9(c) as follows:

(i) The hundredweight of producer milk received times the producer price differential as adjusted pursuant to § 1030.75;

(ii) The pounds of butterfat received times the butterfat price for the month;

(iii) The pounds of protein received times the protein price for the month;

(iv) The pounds of other solids received times the other solids price for the month;

(v) The hundredweight of milk received times the somatic cell adjustment for the month; and

(vi) Add together the amounts computed in paragraphs (c)(3)(i) through (v) of this section and from that sum deduct any payment made pursuant to paragraph (c)(1) of this section.

(d) If a handler has not received full payment from the market administrator pursuant to § 1030.72 by the payment date specified in paragraph (a), (b) or (c)(2) of this section, the handler may reduce pro rata its payments to producers or to the cooperative association (with respect to receipts described in paragraph (b), prorating the underpayment to the volume of milk received from the cooperative association in proportion to the total milk received from producers by the handler), but not by more than the amount of the underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(e) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund, and in the event that the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant, as the case may be.

(f) In making payments to producers pursuant to this section, each handler shall furnish each producer, except a producer whose milk was received from a cooperative association handler described in § 1000.9(a) or (c), a supporting statement in a form that may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and payroll number of the producer;

(2) The daily and total pounds, and the month and dates such milk was received from that producer;

(3) The total pounds of butterfat, protein, and other solids contained in the producer's milk;

(4) The somatic cell count of the producer's milk;

(5) The minimum rate or rates at which payment to the producer is required pursuant to this order;

(6) The rate used in making payment if the rate is other than the applicable minimum rate;

(7) The amount, or rate per hundredweight, or rate per pound of component, and the nature of each deduction claimed by the handler; and

(8) The net amount of payment to the producer or cooperative association.

§ 1030.74 [Reserved]

§ 1030.75 Plant location adjustments for producer milk and nonpool milk.

(a) The producer price differential for producer milk shall be adjusted according to the location of the plant at which the milk was physically received by subtracting from the price differential the amount by which the Class I price specified in § 1030.51 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1030.51, the difference shall be added to the producer price differential price; and

(b) The producer price differential applicable to other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted producer price differential shall not be less than zero.

§ 1030.76 Payments by a handler operating a partially regulated distributing plant.

See § 1000.76 of this chapter.

§ 1030.77 Adjustment of accounts.

See § 1000.77 of this chapter.

1032.11 [Reserved]
1032.12 Producer.
1032.13 Producer milk.
1032.14 Other source milk.
1032.15 Fluid milk product.
1032.16 Fluid cream product.
1032.17 [Reserved]
1032.18 Cooperative association.
1032.19 Commercial food processing establishment.

Handler Reports

1032.30 Reports of receipts and utilization.
1032.31 Payroll reports.
1032.32 Other reports.

Classification of Milk

1032.40 Classes of utilization.
1032.41 [Reserved]
1032.42 Classification of transfers and diversions.
1032.43 General classification rules.
1032.44 Classification of producer milk.
1032.45 Market administrator's reports and announcements concerning classification.

Class Prices

1032.50 Class prices and component prices.
1032.51 Class I differential and price.
1032.52 Adjusted Class I differentials.
1032.53 Announcement of class prices and component prices.
1032.54 Equivalent price.

Producer Price Differential

1032.60 Handler's value of milk.
1032.61 Computation of producer price differential.
1032.62 Announcement of producer prices.

Payments for Milk

1032.70 Producer-settlement fund.
1032.71 Payments to the producer-settlement fund.
1032.72 Payments from the producer-settlement fund.
1032.73 Payments to producers and to cooperative associations.
1032.74 [Reserved]
1032.75 Plant location adjustments for producer milk and nonpool milk.
1032.76 Payments by a handler operating a partially regulated distributing plant.
1032.77 Adjustment of accounts.
1032.78 Charges on overdue accounts.

Administrative Assessment and Marketing Service Deduction

1032.85 Assessment for order administration.
1032.86 Deduction for marketing services.

Authority: 7 U.S.C. 601–674.

Subpart—Order Regulating Handling

General Provisions

§ 1032.1 General provisions.

The terms, definitions, and provisions in Part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1032.2 Central marketing area.

The marketing area means all territory within the bounds of the following states and political subdivisions, including all piers, docks, and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State, or Federal) reservations,

VOL 63 ISS 20 JA 30 1998 UMI

installations, institutions, or other similar establishments if any part thereof is within any of the listed states or political subdivisions:

(a) In the State of Colorado, the counties of: Adams, Arapahoe, Baca, Bent, Boulder, Clear Creek, Cheyenne, Crowley, Custer, Denver, Douglas, El Paso, Elbert, Gilpin, Huerfano, Jefferson, Kiowa, Kit Carson, Larimer, Las Animas, Lincoln, Logan, Morgan, Otero, Park, Phillips, Prowers, Pueblo, Sedgwick, Teller, Washington, Weld, and Yuma.

(b) In the State of Illinois, the counties of:

(1) Adams, Alexander, Bond, Brown, Bureau, Calhoun, Cass, Champaign, Christian, Clark, Clay, Clinton, Coles, Crawford, Cumberland, De Witt, Douglas, Edgar, Edwards, Effingham, Fayette, Ford, Franklin, Fulton, Gallatin, Greene, Grundy, Hamilton, Hancock, Hardin, Henderson, Henry, Iroquois, Jackson, Jasper, Jefferson, Jersey, Johnson, Kankakee, Knox, La Salle, Lawrence, Livingston, Logan, McDonough, McLean, Macon, Macoupin, Madison, Marion, Marshall, Mason, Massac, Menard, Mercer, Monroe, Montgomery, Morgan, Moultrie, Peoria, Perry, Piatt, Pike, Pope, Pulaski, Putnam, Randolph, Richland, Rock Island, Saline, Sangamon, Schuyler, Scott, Shelby, St. Clair, Stark, Tazewell, Union, Vermilion, Wabash, Warren, Washington, Wayne, White, Williamson, and Woodford;

(2) In Jo Daviess County, the city of East Dubuque; and

(3) In Whiteside County, the townships of Fulton, Ustick, Clyde, Genesee, Mount Pleasant, Union Grove, Garden Plain, Lyndon, Fenton, Newton, Prophetstown, Portland, and Erie.

(c) In the State of Iowa:

(1) All of the counties except: Howard, Kossuth, Mitchell (except the city of Osage), Winnebago, Winneshiek, and Worth; and

(2) In Mitchell County the city of Osage.

(d) All of the State of Kansas.

(e) In the State of Minnesota, the counties of: Lincoln, Nobles, Pipestone, and Rock.

(f) In the State of Missouri: (1) The counties of:

Andrew, Atchison, Bates, Buchanan, Caldwell, Carroll, Cass, Clark, Clay, Clinton, Daviess, De Kalb, Franklin, Gentry, Grundy, Harrison, Henry, Hickory, Holt, Jackson, Jefferson, Johnson, Knox, Lafayette, Lewis, Lincoln, Livingston, Marion, Mercer, Nodaway, Pettis, Platte, Putnam, Ray, Saline, Schuyler, Scotland, Shelby, St. Charles, St. Clair, Ste. Genevieve, St. Louis, Sullivan, Warren, and Worth; and

(2) The city of St. Louis.

(g) In the State of Nebraska, the counties of: Adams, Antelope, Boone, Buffalo, Burt, Butler, Cass, Cedar, Chase, Clay, Colfax, Cuming, Custer, Dakota, Dawson, Dixon, Dodge, Douglas, Dundy, Fillmore, Franklin, Frontier, Furnas, Gage, Gosper, Greeley, Hall, Hamilton, Harlan, Hayes, Hitchcock, Howard, Jefferson, Johnson, Kearney, Keith, Knox, Lancaster, Lincoln, Madison, Merrick, Nance, Nemaha, Nuckolls, Otoe, Pawnee, Perkins, Phelps, Pierce, Platte, Polk, Red Willow, Richardson, Saline, Sarpy, Saunders, Seward, Sherman, Stanton, Thayer, Thurston, Valley, Washington, Wayne, Webster, and York.

(h) All of the State of Oklahoma.

(i) In the State of South Dakota, the counties of: Aurora, Beadle, Bon Homme, Brookings, Clark, Clay, Codington, Davison, Deuel, Douglas, Hamlin, Hanson, Hutchinson, Jerauld, Kingsbury, Lake, Lincoln, McCook, Miner, Minnehaha, Moody, Sanborn, Spink, Turner, Union, and Yankton.

(j) In the State of Wisconsin, the counties of: Crawford and Grant.

§ 1032.3 Route disposition.

See § 1000.3 of this chapter.

§ 1032.4 Plant.

See § 1000.4 of this chapter.

§ 1032.5 Distributing plant.

§ 1000.5 of this chapter.

§ 1032.6 Supply plant.

§ 1000.6 of this chapter.

§ 1032.7 Pool plant.

Pool plant means a plant, unit of plants, or a system of plants as specified in paragraphs (a) through (f) of this section. The pooling standards described in paragraphs (a), (c), (d), (e), and (f) of this section are subject to modification pursuant to paragraph (g) of this section:

(a) A distributing plant from which during the month:

(1) Total route disposition is equal to 25 percent of more of the total quantity of bulk fluid milk products physically received at the plant; and

(2) Route disposition in the marketing area is at least 15 percent of total route disposition.

(3) For purposes of this section, packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the single purpose of qualifying the transferring plant as a pool distributing plant.

(b) A distributing plant located in the marketing area at which the majority of milk received is processed into aseptically packaged fluid milk products unless there are no sales from the plant into any marketing area and the plant operator in writing requests nonpool plant status for the plant for the month.

(c) A supply plant from which the quantity of bulk fluid milk products transferred or diverted to plants described in paragraph (a) or (b) of this section during each of the months of September through November and January is 35 percent or more of the total Grade A milk received at the plant from dairy farmers (except dairy farmers described in § 1032.12(b)) and handlers described in § 1000.9(c), including milk diverted by the plant operator, and 25 percent for all other months, subject to the following conditions:

(1) A supply plant that has qualified as a pool plant during each of the immediately preceding months of August through April shall continue to so qualify in each of the following months of May through July, unless the plant operator files a written request with the market administrator that such plant not be a pool plant, such nonpool status to be effective the first month following such request and thereafter until the plant qualifies as a pool plant on the basis of milk shipments;

(2) A pool plant operator may include as qualifying shipments milk diverted to pool distributing plants pursuant to § 1032.13(c);

(3) The operator of a supply plant may include as qualifying shipments transfers of fluid milk products to distributing plants regulated under any other Federal order, except that credit for such transfers shall be limited to the amount of milk, including milk shipped directly from producers' farms, delivered to distributing plants qualified as pool plants pursuant to paragraphs (a) or (b) of this section;

(4) No plant may qualify as a pool plant due to a reduction in the shipping percentage pursuant to paragraph (g) of this section unless it has been a pool supply plant during each of the immediately preceding three months.

(d) A plant located in the marketing area and operated by a cooperative association if, during the month or the immediately preceding 12-month period, 35 percent or more of the producer milk of members of the association (and any producer milk of nonmembers and members of another cooperative association which may be marketed by the cooperative association) is physically received in the form of bulk fluid milk products at

plants specified in paragraph (a) or (b) of this section either directly from farms or by transfer from supply plants operated by the cooperative association and from plants of the cooperative association for which pool plant status has been requested under this paragraph subject to the following conditions:

(1) The plant does not qualify as a pool plant under paragraph (a), (b) or (c) of this section or under comparable provisions of another Federal order; and

(2) The plant is approved by a duly constituted regulatory agency for the handling of milk approved for fluid consumption in the marketing area:

(e) Two or more plants operated by the same handler and located in the marketing area may qualify for pool status as a unit by meeting the total and in-area route disposition requirements of a pool distributing plant specified in paragraph (a) of this section and subject to the following additional requirements:

(1) At least one of the plants in the unit must qualify as a pool plant pursuant to paragraph (a) of this section;

(2) Other plants in the unit must process Class I or Class II products, using 50 percent or more of the total Grade A fluid milk products received in bulk form at such plant or diverted therefrom by the plant operator in Class I or Class II products, and must be located in a pricing zone providing the same or a lower Class I price than the price applicable at the distributing plant included in the unit pursuant to paragraph (e)(1) of this section; and

(3) The operator of the unit has filed a written request with the market administrator prior to the first day of the month for which such status is desired to be effective. The unit shall continue from month to month thereafter without further notification. The handler shall notify the market administrator in writing prior to the first day of any month for which termination or any change of the unit is desired.

(f) A system of supply plants may be qualified for pooling by the association of two or more supply plants operated by one or more handlers by meeting the applicable percentage requirements of paragraph (c) of this section in the same manner as a single plant, subject to the following additional requirements:

(1) Each plant in the system is located within the marketing area;

(2) The handler(s) establishing the system submits a written request to the market administrator on or before September 1 requesting that such plants qualify as a system for the period of September through August of the following year. Such request will contain a list of the plants participating in the system.

(3) Each plant included within a pool supply plant system shall continue each month as a plant in the system through the following August unless the handler(s) establishing the system submits a written request to the market administrator that the plant be deleted from the system or that the system be discontinued. Any plant that has been so deleted from a system, or that has failed to qualify in any month, will not be part of any system for the remaining months through August. No plant may be added in any subsequent month through the following August to a system that qualifies in September.

(4) If a system fails to qualify under the requirements of this paragraph, the handler responsible for qualifying the system shall notify the market administrator which plant or plants will be deleted from the system so that the remaining plants may be pooled as a system. If the handler fails to do so, the market administrator shall exclude one or more plants, beginning at the bottom of the list of plants in the system and continuing up the list as necessary until the deliveries are sufficient to qualify the remaining plants in the system;

(g) The applicable shipping percentages of paragraphs (a), (c), (d), and (f) of this section may be increased or decreased by the market administrator if found necessary to obtain needed shipments or to prevent uneconomic shipments. Before making a finding that a change is necessary the market administrator shall investigate the need for revision, either on the market administrator's own initiative or at the request of interested persons. If such investigation shows that a revision might be appropriate, a notice shall be issued stating that a revision is being considered and inviting data, views, and arguments. If the market administrator determines that an adjustment to the shipping percentages is necessary, the market administrator shall notify the industry within one day of the effective date of such adjustment.

(h) The term pool plant shall not apply to the following plants:

(1) A producer-handler as defined under any Federal order;

(2) An exempt plant as defined in § 1000.8(e);

(3) A plant located within the marketing area and qualified pursuant to paragraph (a) or (e) of this section which meets the pooling requirements of another Federal order, and from which more than 50 percent of its route disposition has been in the other Federal order marketing area for three consecutive months. On the basis of a written application made by the plant operator at least 15 days prior to the date for which a determination of the market administrator is to be effective, the market administrator may determine that the route disposition in the respective marketing areas to be used for purposes of this paragraph shall exclude (for a specified period of time) route disposition made under limited term contracts to governmental bases and institutions;

(4) A plant located outside the marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of another Federal order and has had greater sales in such other Federal order's marketing area for 3 consecutive months;

(5) A plant located in another Federal order marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of such other Federal order and does not have a majority of its route distribution in this marketing area for 3 consecutive months or if the plant is required to be regulated under such other Federal order without regard to its route disposition in any other Federal order marketing area;

(6) A plant qualified pursuant to paragraph (c) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under the other Federal order than are made to plants regulated under this order, or the plant has automatic pooling status under the other Federal order; and

(7) That portion of a regulated plant designated as a nonpool plant that is physically separate and operated separately from the pool portion of such plant. The designation of a portion of a regulated plant as a nonpool plant must be requested in advance and in writing by the handler and must be approved by the market administrator.

§ 1032.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1032.9 Handler.

See § 1000.9 of this chapter.

§ 1032.10 Producer-handler.

Except as provided in paragraph (g) of this section, *producer-handler* means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds during the month;

(b) Receives no fluid milk products from sources other than own farm production, pool handlers, and plants

VOL 63 ISS 20 JA 30 1998 UMI

fully regulated under another Federal order;

(c) Receives at its plant or acquires for route disposition no more than 150,000 pounds of fluid milk products from handlers fully regulated under any Federal order. This limitation shall not apply if the producer-handler's own farm production is less than 150,000 pounds during the month.

(d) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own farm production or pool handlers;

(e) Disposes of no fluid milk products using the distribution system of another handler except for direct deliveries to retail outlets or to a pool handler's plant;

(f) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled (excluding receipts from handlers fully regulated under any Federal order) and the processing, packaging, and distribution operations are the producer-handler's own enterprise and at its own risk; and

(g) Producer-handler shall not include any producer who also operates a distributing plant if the producer-handler so requests that the two be operated as separate entities with the distributing plant regulated under § 1032.7(a) and the farm operated as a producer under § 1032.12.

§ 1032.11 [Reserved]

§ 1032.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk (or components of milk) is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1032.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1032.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I; and

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order.

§ 1032.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk), including nonfat components, and butterfat in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of a pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it is picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants;

(c) Diverted by a pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or a cooperative association described in § 1000.9(c) to a nonpool plant, subject to the following conditions:

(1) Milk of a dairy farmer shall not be eligible for diversion unless at least one day's production of such dairy farmer has been physically received as producer milk at a pool plant and the dairy farmer has continuously retained producer status since that time. If a dairy farmer loses producer status under this order (except as a result of a temporary loss of Grade A approval), the dairy farmer's milk shall not be eligible for diversion until milk of the dairy farmer has been physically received as producer milk at a pool plant;

(2) Of the quantity of producer milk received during the month (including diversions, but excluding the quantity of producer milk received from a handler described in § 1000.9(c)) the handler diverts to nonpool plants not more than 65 percent during the months of September through November and January, and not more than 75 percent during the months of February through August and December;

(3) Diverted milk shall be priced at the location of the plant to which diverted;

(4) Any milk diverted in excess of the limits prescribed in (d)(2) of this section shall not be producer milk. If the diverting handler or cooperative association fails to designate the dairy farmers' deliveries that are not to be producer milk, no milk diverted by the handler or cooperative association during the month to a nonpool plant shall be producer milk; and

(5) The applicable diversion limits in paragraph (d)(2) of this section may be increased or decreased by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested persons. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

§ 1032.14 Other source milk.

See § 1000.14 of this chapter.

§ 1032.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1032.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1032.17 [Reserved]

§ 1032.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1032.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1032.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office receives the report on or before the 7th day after the end of the month, in the detail and on the prescribed forms, as follows:

(a) Each handler that operates a pool plant pursuant to § 1032.7 and each handler described in § 1000.9(c) shall report for each of its operations the following information:

(1) Product pounds, pounds of butterfat, pounds of protein, pounds of solids-not-fat other than protein (other solids), and the value of the somatic cell adjustment pursuant to § 1000.50(p), contained in or represented by:

(i) Receipts of producer milk, including producer milk diverted by the handler; and

(ii) Receipts of milk from handlers described in § 1000.9(c);

(2) Product pounds and pounds of butterfat contained in:

(i) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(ii) Receipts of other source milk; and

(iii) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products;

(3) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph; and

(4) Such other information with respect to the receipts and utilization of skim milk, butterfat, milk protein, other nonfat solids, and somatic cell information, as the market administrator may prescribe.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler not specified in paragraphs (a) and (b) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1032.31 Payroll reports.

(a) On or before the 20th day after the end of each month, each handler that operates a pool plant pursuant to § 1032.7 and each handler described in § 1000.9(c) shall report to the market administrator its producer payroll for the month, in the detail prescribed by the market administrator, showing for each producer the information described in § 1032.73(f).

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1032.32 Other reports.

In addition to the reports required pursuant to §§ 1032.30 and 1032.31, each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1032.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1032.41 [Reserved]

§ 1032.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1032.43 General classification rules.

See § 1000.43 of this chapter.

§ 1032.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1032.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1032.50 Class prices and component prices.

See § 1000.50 of this chapter.

§ 1032.51 Class I differential and price.

The Class I differential shall be the differential established for Jackson County, Missouri, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Jackson County, Missouri.

§ 1032.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1032.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1032.54 Equivalent price.

See § 1000.54 of this chapter.

Producer Price Differential

§ 1032.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of its pool plants, and of each handler described in § 1000.9(c) as follows:

(a) Class I value.

(1) Multiply the hundredweight of skim milk in Class I as determined pursuant to § 1000.44(a) by the Class I skim milk price applicable at the handler's location; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class I as determined pursuant to § 1000.44(b) by the Class I butterfat price applicable at the handler's location.

(b) Add the Class II value, computed as follows:

(1) Multiply the hundredweight of skim milk in Class II as determined pursuant to § 1000.44(a) by 70 cents;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class II as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class II as determined pursuant to § 1000.44(b) by the butterfat price;

(c) Add the Class III value computed as follows:

(1) Multiply the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average protein content of producer skim milk received by the handler, and multiply the resulting pounds of protein by the protein price;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average other solids content of producer skim milk received by the handler, and multiply the resulting pounds of other solids by the other solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class III as determined pursuant to § 1000.44(b) by the butterfat price;

(d) Add the Class IV value computed as follows:

(1) Multiply the pounds of skim milk in Class IV as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class IV as determined pursuant to § 1000.44(b) by the butterfat price;

(e) Add an adjustment for somatic cell content of producer milk determined by multiplying the value reported pursuant to § 1032.30(a)(1) by the percentage of the total producer milk allocated to Class II, Class III, and Class IV pursuant to § 1000.44(c);

(f) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(g) Add the amount obtained from multiplying the difference between the

VOL 63 ISS 20 JA 30 1998 UMI

Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(h) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(i) Add the amount obtained from multiplying the difference between the Class I price and the Class III price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of bulk fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(j) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I pursuant to § 1000.43(d); and

(k) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another order under § 1000.76(a)(5) or (c).

§ 1032.61 Computation of producer price differential.

For each month the market administrator shall compute a producer price differential per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1032.71 for the preceding month shall not be included in the computation of the producer price differential. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the producer price differential in the following manner:

(a) Combine into one total the values computed pursuant to § 1032.60 for all handlers required to file reports prescribed in § 1032.30;

(b) Subtract the total values obtained by multiplying each handler's total pounds of protein, other solids, and butterfat contained in the milk for which an obligation was computed pursuant to § 1032.60 by the protein price, the other solids price, and the butterfat price, respectively, and the total value of the somatic cell adjustment pursuant to § 1032.30(a)(1);

(c) Add an amount equal to the sum of the location adjustments computed pursuant to § 1032.75;

(d) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(e) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(1) The total hundredweight of producer milk; and

(2) The total hundredweight for which a value is computed pursuant to § 1032.60(i); and

(f) Subtract not less than 4 cents nor more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result shall be known as the *producer price differential* for the month.

§ 1032.62 Announcement of producer prices.

On or before the 11th day after the end of each month, the market administrator shall announce publicly the following prices and information:

(a) The producer price differential;

(b) The protein price;

(c) The other solids price;

(d) The butterfat price;

(e) The somatic cell adjustment rate;

(f) The average butterfat, protein and other solids content of producer milk; and

(g) The statistical uniform price for milk containing 3.5 percent butterfat, computed by combining the Class III price and the producer price differential.

Payments for Milk

§ 1032.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1032.71 Payments to the producer-settlement fund.

Each handler shall make payment to the producer-settlement fund in a manner that provides receipt of the funds by the market administrator no later than the 14th day after the end of the month. Payment shall be the amount, if any, by which the amount specified in (a) of this section exceeds the amount specified in (b) of this section:

(a) The total value of milk to the handler for the month as determined pursuant to § 1032.60.

(b) The sum of:

(1) An amount obtained by multiplying the total hundredweight of producer milk as determined pursuant to § 1000.44(c) by the producer price differential as adjusted pursuant to § 1032.75;

(2) An amount obtained by multiplying the total pounds of protein, other solids, and butterfat contained in producer milk by the protein, other solids, and butterfat prices respectively;

(3) The total value of the somatic cell adjustment to producer milk; and

(4) An amount obtained by multiplying the pounds of skim milk and butterfat for which a value was computed pursuant to § 1032.60(i) by the producer price differential as adjusted pursuant to § 1032.75 for the location of the plant from which received.

§ 1032.72 Payments from the producer-settlement fund.

No later than the 15th day after the end of each month, the market administrator shall pay to each handler the amount, if any, by which the amount computed pursuant to § 1032.71(b) exceeds the amount computed pursuant to § 1032.71(a). If, at such time, the balance in the producer-settlement fund is insufficient to make all payments pursuant to this section, the market administrator shall reduce uniformly such payments and shall complete the payments as soon as the funds are available.

§ 1032.73 Payments to producers and to cooperative associations.

(a) Each handler shall pay each producer for producer milk for which payment is not made to a cooperative association pursuant to paragraph (b) of this section, as follows:

(1) *Partial payment.* For each producer who has not discontinued shipments as of the date of this partial payment, payment shall be made so that it is received by each producer on or before the 26th day of the month for milk received during the first 15 days of the month from the producer at not less than the lowest announced class price for the preceding month, less proper deductions authorized in writing by the producer; and

(2) *Final payment.* For milk received during the month, payment shall be made so that it is received by each producer no later than the 17th day after the end of the month in an amount equal to not less than the sum of:

(i) The hundredweight of producer milk received times the producer price differential for the month as adjusted pursuant to § 1032.75;

(ii) The pounds of butterfat received times the butterfat price for the month;

(iii) The pounds of protein received times the protein price for the month;

(iv) The pounds of other solids received times the other solids price for the month;

(v) The hundredweight of milk received times the somatic cell adjustment for the month;

(vi) Less any payment made pursuant to paragraph (a)(1) of this section;

(vii) Less proper deductions authorized in writing by such producer and plus or minus adjustments for errors in previous payments to such producer; and

(viii) Less deductions for marketing services pursuant to § 1000.86.

(b) *Payments for milk received from cooperative association members.* On or before the day prior to the dates specified in paragraphs (a)(1) and (a)(2) of this section, each handler shall pay to a cooperative association for milk from producers who market their milk through the cooperative association and who have authorized the cooperative to collect such payments on their behalf an amount equal to the sum of the individual payments otherwise payable for such producer milk pursuant to paragraphs (a)(1) and (a)(2) of this section.

(c) *Payment for milk received from cooperative association pool plants or from cooperatives as handlers pursuant to § 1000.9(c).* On or before the day prior to the dates specified in paragraph (a)(1) and (a)(2) of this section, each handler who receives fluid milk products at its plant from a cooperative association in its capacity as the operator of a pool plant or who receives milk from a cooperative association in its capacity as a handler pursuant to § 1000.9(c), including the milk of producers who are not members of such association and who the market administrator determines have authorized the cooperative association to collect payment for their milk, shall pay the cooperative for such milk as follows:

(1) For bulk fluid milk products and bulk fluid cream products received from a cooperative association in its capacity as the operator of a pool plant and for milk received from a cooperative association in its capacity as a handler pursuant to § 1000.9(c) during the first 15 days of the month, at not less than the lowest announced class price per hundredweight for the preceding month;

(2) For the total quantity of bulk fluid milk products and bulk fluid cream products received from a cooperative association in its capacity as the operator of a pool plant, at not less than the total value of such products received from the association's pool plants, as determined by multiplying the respective quantities assigned to each class under § 1000.44, as follows:

(i) The hundredweight of Class I skim milk times the Class I skim milk price for the month plus the pounds of Class I butterfat times the Class I butterfat price for the month. The Class I price to be used shall be that price effective at the location of the shipping plant;

(ii) The hundredweight of Class II skim milk times $.70;

(iii) The pounds of nonfat solids received in Class II and Class IV milk times the nonfat solids price for the month;

(iv) The pounds of butterfat received in Class II, Class III, and Class IV milk times the butterfat price for the month;

(v) The pounds of protein received in Class III milk times the protein price for the month;

(vi) The pounds of other solids received in Class III milk times the other solids price for the month;

(vii) The hundredweight of Class II, Class III, and Class IV milk received times the somatic cell adjustment; and

(viii) Add together the amounts computed in paragraphs (c)(2)(i) through (vii) of this section and from that sum deduct any payment made pursuant to paragraph (c)(1) of this section.

(3) For the total quantity of milk received during the month from a cooperative association in its capacity as a handler under § 1000.9(c) as follows:

(i) The hundredweight of producer milk received times the producer price differential as adjusted pursuant to § 1032.75;

(ii) The pounds of butterfat received times the butterfat price for the month;

(iii) The pounds of protein received times the protein price for the month;

(iv) The pounds of other solids received times the other solids price for the month;

(v) The hundredweight of milk received times the somatic cell adjustment for the month; and

(vi) Add together the amounts computed in paragraphs (c)(3)(i) through (v) of this section and from that sum deduct any payment made pursuant to paragraph (c)(1) of this section.

(d) If a handler has not received full payment from the market administrator pursuant to § 1032.72 by the payment date specified in paragraph (a), (b) or (c) of this section, the handler may reduce pro rata its payments to producers or to the cooperative association (with respect to receipts described in paragraph (b), prorating the underpayment to the volume of milk received from the cooperative association in proportion to the total milk received from producers by the handler), but not by more than the amount of the underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(e) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund, and in the event that the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant, as the case may be.

(f) In making payments to producers pursuant to this section, each handler shall furnish each producer, except a producer whose milk was received from a cooperative association handler described in § 1000.9(a) or (c), a supporting statement in a form that may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and payroll number of the producer;

VOL 63 ISS 20 JA 30 1998 UMI

(2) The daily and total pounds, and the month and dates such milk was received from that producer;

(3) The total pounds of butterfat, protein, and other solids contained in the producer's milk;

(4) The somatic cell count of the producer's milk;

(5) The minimum rate or rates at which payment to the producer is required pursuant to this order;

(6) The rate used in making payment if the rate is other than the applicable minimum rate;

(7) The amount, or rate per hundredweight, or rate per pound of component, and the nature of each deduction claimed by the handler; and

(8) The net amount of payment to the producer or cooperative association.

§ 1032.74 [Reserved]

§ 1032.75 Plant location adjustments for producer milk and nonpool milk.

(a) The producer price differential for producer milk shall be adjusted according to the location of the plant at which the milk was physically received by subtracting from the price differential the amount by which the Class I price specified in § 1032.51 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1032.51, the difference shall be added to the producer price differential; and

(b) The producer price differential applicable to other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted producer price differential shall not be less than zero.

§ 1032.76 Payments by a handler operating a partially regulated distributing plant.

Definitions

§ 1033.2 Mideast marketing area.

The marketing area means all territory within the bounds of the following states and political subdivisions, including all piers, docks, and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State, or Federal) reservations, installations, institutions, or other similar establishments if any part thereof is within any of the listed states or political subdivisions:

Ohio

All of the State of Ohio.

Indiana Counties

Adams, Allen, Bartholomew, Benton, Blackford, Boone, Brown, Carroll, Cass, Clay, Clinton, Dearborn, Decatur, De Kalb, Delaware, Elkhart, Fayette, Fountain, Franklin, Fulton, Grant, Hamilton, Hancock, Hendricks, Henry, Howard, Huntington, Jackson, Jasper, Jay, Jefferson, Jennings, Johnson, Kosciusko, Lagrange, Lake, La Porte, Lawrence, Madison, Marion, Marshall, Miami, Monroe, Montgomery, Morgan, Newton, Noble, Ohio, Owen, Parke, Porter, Pulaski, Putnam, Randolph, Ripley, Rush, Shelby, St. Joseph, Starke, Steuben, Switzerland, Tippecanoe, Tipton, Union, Vermillion, Vigo, Wabash, Warren, Wayne, Wells, White, and Whitley.

Kentucky Counties

Boone, Boyd, Bracken, Campbell, Floyd, Grant, Greenup, Harrison, Johnson, Kenton, Lawrence, Lewis, Magoffin, Martin, Mason, Pendleton, Pike, and Robertson.

Michigan Counties

All counties except Delta, Dickinson, Gogebic, Iron, Menominee, and Ontonagon.

Pennsylvania Counties

Allegheny, Armstrong, Beaver, Butler, Crawford, Erie, Fayette, Greene, Lawrence, Mercer, Venango, and Washington.

In Clarion County only the townships of Ashland, Beaver, Licking, Madison, Perry, Piney, Richland, Salem, and Toby.

All of Westmoreland County except the townships of Cook, Donegal, Fairfield, Ligonier, and St. Clair, and the boroughs of Bolivar, Donegal, Ligonier, New Florence, and Seward.

West Virginia Counties

Barbour, Boone, Brooke, Cabell, Calhoun, Doddridge, Fayette, Gilmer, Hancock, Harrison, Jackson, Kanawha, Lewis, Lincoln, Logan, Marion, Marshall, Mason, Mingo, Monongalia, Ohio, Pleasants, Preston, Putnam, Raleigh, Randolph, Ritchie, Roane, Taylor, Tucker, Tyler, Upshur, Wayne, Wetzel, Wirt, Wood, and Wyoming.

§ 1033.3 Route disposition.

See § 1000.3 of this chapter.

§ 1033.4 Plant.

See § 1000.4 of this chapter.

§ 1033.5 Distributing plant.

See § 1000.5 of this chapter.

§ 1033.6 Supply plant.

See § 1000.6 of this chapter.

§ 1033.7 Pool plant.

Pool plant means a plant, unit of plants, or a system of plants as specified in paragraphs (a) through (f) of this section. The pooling standards described in paragraphs (a), (c), (d), (e), and (f) of this section are subject to modification pursuant to paragraph (g) of this section:

(a) A distributing plant from which during the month:

(1) Total route disposition is equal to 30 percent or more of the total quantity of bulk fluid milk products physically received at the plant;

(2) Route disposition in the marketing area is at least 30 percent of total route disposition.

(3) For purposes of this section, packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the single purpose of qualifying the transferring plant as a pool distributing plant.

(b) A distributing plant located in the marketing area at which the majority of milk received is processed into aseptically packaged fluid milk products unless there are no sales from the plant into any marketing area and the plant operator in writing requests nonpool plant status for the plant for the month.

(c) A supply plant from which the quantity of bulk fluid milk products shipped to, received at, and physically unloaded into plants described in paragraph (a) or (b) of this section as a percent of the Grade A milk received at the plant from dairy farmers (except dairy farmers described in § 1033.12(b)) and handlers described in § 1033.9(c), as reported in § 1033.30(a), is not less than 30 percent of the milk received from dairy farmers, including milk diverted pursuant to § 1033.13, subject to the following conditions:

(1) Qualifying shipments pursuant to this paragraph may be made to the following plants, except whenever the authority provided in paragraph (g) of this section is applied to increase the shipping requirements specified in this section, only shipments to pool plants described in § 1033.7(a) and (b), and units described in § 1033.7(e) shall count as qualifying shipments for the purpose of meeting the increased shipments:

(i) Pool plants described in § 1033.7(a), (b) and (e);

(ii) Plants of producer-handlers;

(iii) Partially regulated distributing plants, except that credit for such shipments shall be limited to the amount of such milk classified as Class I at the transferee plant; and

(iv) Distributing plants fully regulated under other Federal orders, except that credit for transfers to such plants shall be limited to the quantity shipped to pool distributing plants during the month. Qualifying transfers to other order plants shall not include transfers made on the basis of agreed-upon Class II, Class III, or Class IV utilization.

(2) The operator of a supply plant may include deliveries to pool distributing plants directly from farms of producers pursuant to § 1033.13(c) as up to 90 percent of the supply plant's qualifying shipments;

(3) A supply plant that meets the shipping requirements of this paragraph during each of the immediately preceding months of September through February shall be a pool plant during the following months of March through August unless the milk received at the plant fails to meet the requirements of a duly constituted regulatory agency, the plant fails to meet a shipping requirement instituted pursuant to paragraph (f) of this section, or the plant operator requests nonpool status for the plant. Such nonpool status shall be effective on the first day of the month following the receipts of such request and thereafter until the plant again qualifies as a pool plant on the basis of its deliveries to a pool distributing plant(s).

The automatic pool qualification of a plant can be waived if the handler or cooperative requests in writing to the market administrator the nonpool status of such plant. The request must be made prior to the beginning of any month during the March through August period. The plant shall be a nonpool plant for such month and thereafter until it requalifies under paragraph (c) of this section on the basis of actual shipments therefrom. To requalify as a pool plant under paragraph (d), (e) or (f) of this section, such plant must first have met the percentage shipping requirements of paragraph (c) of this section for 6 consecutive months; and

(4) A supply plant that does not meet the minimum delivery requirements specified in this paragraph to qualify for pool status in the current month because a distributing plant to which the supply plant delivered its fluid milk products during such month failed to qualify as a pool plant pursuant to paragraph (a) or (b) of this section shall continue to be a pool plant for the current month if such supply plant qualified as a pool plant in the three immediately preceding months.

(d) A plant operated by a cooperative association if, during the month, 35 percent or more of the producer milk of members of the association is delivered to a distributing pool plant(s) or to a nonpool plant(s), and classification other than Class I is not requested. Deliveries for qualification purposes may be made directly from the farm or by transfer from such association's plant, subject to the following conditions:

(1) The cooperative requests pool status for such plant;

(2) The 35-percent delivery requirement may be met for the current month or it may be met on the basis of deliveries during the preceding 12-month period ending with the current month;

(3) The plant is approved by a duly constituted regulatory authority to handle milk for fluid consumption; and

(4) The plant does not qualify as a pool plant under (a), (b), or (c) of this section or under the similar provisions of another Federal order applicable to a distributing plant or supply plant.

(e) A plant located inside the marketing area which has been a pool plant under this order or its predecessor orders for twelve consecutive months, but is not otherwise qualified under this paragraph, if it has a marketing agreement with a cooperative association and it fulfills the following conditions:

(1) The aggregate monthly quantity supplied by all parties to such an agreement as a percentage of the producer milk receipts included in the unit during the month is not less than 35 percent; and

(2) Shipments for qualification purposes shall include both transfers from supply plants to plants described in paragraph (c)(1) of this section, and deliveries made direct from the farm to plants qualified under paragraph (a) of this section.

(f) A system of supply plants may be qualified for pooling by the association of two or more supply plants operated

VOL 63 ISS 20 JA 30 1998 UMI

by one or more handlers by meeting the applicable percentage requirements of paragraph (c) of this section in the same manner as a single plant and subject to the following additional requirements:

(1) Each plant in the system is located within the marketing area, or was a pool supply plant for each of the three months immediately preceding the effective date of this paragraph so long as it continues to maintain pool status. Cooperative associations may not use shipments pursuant to § 1033.9(c) to qualify plants located outside the marketing area;

(2) A written notification to the market administrator listing the plants to be included in the system and the handler that is responsible for meeting the performance requirements of this paragraph under a marketing agreement certified to the market administrator by the designated handler and any others included in the system, and the period during which such consideration shall apply. Such notice, and notice of any change in designation, shall be furnished on or before the fifth working day following the month to which the notice applies. The listed plants included in the system shall also be in the sequence in which they shall qualify for pool plant status based on the minimum deliveries required. If the deliveries made are insufficient to qualify the entire system for pooling, the last listed plant shall be excluded from the system, followed by the plant next-to-last on the list, and continuing in this sequence until remaining listed plants have met the minimum shipping requirements; and

(3) Each plant that qualifies as a pool plant within a system shall continue each month as a plant in the system unless the plant subsequently fails to qualify for pooling, or the responsible handler submits a written notification to the market administrator prior to the first day of the month that the plant is to be deleted from the system, or that the system is to be discontinued. In any month of March through August, a system shall not contain any plant which was not qualified under this paragraph, either individually or as a member of a system, during the previous September through February.

(g) The performance standards of paragraphs (a), (c), (d), (e) and (f) of this section may be increased or decreased by the market administrator if the market administrator finds that such adjustment is necessary to obtain needed shipments or to prevent uneconomic shipments. Before making such a finding, the market administrator shall investigate the need for revision, either on the market administrator's own initiative or at the request of interested persons. If such investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that a revision is being considered and inviting data, views, and arguments. If the market administrator determines that an adjustment to the shipping percentages is necessary, the market administrator shall notify the industry within one day of the effective date of such adjustment.

(h) The term pool plant shall not apply to the following plants:

(1) A producer-handler as defined under any Federal order;

(2) An exempt plant as defined in § 1000.8(e);

(3) A plant located within the marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of another Federal order, and from which more than 50 percent of its route disposition has been in the other Federal order marketing area for three consecutive months;

(4) A plant located outside any Federal order marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of another Federal order and has had greater sales in such other Federal order's marketing area for 3 consecutive months;

(5) A plant located in another Federal order marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of such other Federal order and does not have a majority of its route distribution in this marketing area for 3 consecutive months or if the plant is required to be regulated under such other Federal order without regard to its route disposition in any other Federal order marketing area;

(6) A plant qualified pursuant to paragraph (c) or (d) of this section that also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under the other Federal order than are made to plants regulated under this order, or the plant has automatic pooling status under the other Federal order; and

(7) That portion of a regulated plant designated as a nonpool plant that is physically separate and operated separately from the pool portion of such plant. The designation of a portion of a regulated plant as a nonpool plant must be requested in advance and in writing by the handler and must be approved by the market administrator.

(i) Any plant that qualifies as a pool plant in each of the immediately preceding three months pursuant to paragraph (a) of this section or the shipping percentages in paragraph (c) of this section that is unable to meet such performance standards for the current month because of unavoidable circumstances determined by the market administrator to be beyond the control of the handler operating the plant, such as a natural disaster (ice storm, wind storm, flood), fire, breakdown of equipment, or work stoppage, shall be considered to have met the minimum performance standards during the period of such unavoidable circumstances, but such relief shall not be granted for more than two consecutive months.

§ 1033.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1033.9 Handler.

See § 1000.9 of this chapter.

§ 1033.10 Producer-handler.

Except as provided in paragraph (g) of this section, *producer-handler* means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds during the month;

(b) Receives no fluid milk products from sources other than own farm production, pool handlers, and plants fully regulated under another Federal order;

(c) Receives at its plant or acquires for route disposition no more than 150,000 pounds of fluid milk products from handlers fully regulated under any Federal order. This limitation shall not apply if the producer-handler's own farm production is less than 150,000 pounds during the month.

(d) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own farm production or pool handlers;

(e) Disposes of no fluid milk products using the distribution system of another handler except for direct deliveries to retail outlets or to a pool handler's plant;

(f) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled (excluding receipts from handlers fully regulated under any Federal order) and the processing, packaging, and distribution operations are the producer-handler's own enterprise and at its own risk; and

(g) Producer-handler shall not include any producer who also operates a distributing plant if the producer-handler so requests that the two be operated as separate entities with the distributing plant regulated under § 1033.7(a) and the farm operated as a producer under § 1033.12.

§ 1033.11 [Reserved]

§ 1033.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1033.13; or

(2) Received by a handler described in § 1033.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1033.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I; and

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order.

§ 1033.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk), including nonfat components, and butterfat in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of a pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it is picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants;

(c) Diverted by a pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or by a cooperative association described in § 1033.9(c) to a nonpool plant, subject to the following conditions:

(1) Milk of a dairy farmer shall not be eligible for diversion until milk of such dairy farmer has been physically received as producer milk at a pool plant and the dairy farmer has continuously retained producer status since that time. If a dairy farmer loses producer status under this order (except as a result of a temporary loss of Grade A approval), the dairy farmer's milk shall not be eligible for diversion until milk of the dairy farmer has been physically received as producer milk at a pool plant;

(2) The equivalent of at least one day's production is caused by the handler to be physically received at a pool plant in each of the months of September through November;

(3) Of the total quantity of producer milk received during the month (including diversions but excluding the quantity of producer milk received from a handler described in § 1000.9(c)), the handler diverted to nonpool plants not more than 60 percent during the months of September through February;

(4) Diverted milk shall be priced at the location of the plant to which diverted;

(5) Any milk diverted in excess of the limits set forth in paragraph (d)(3) of this section shall not be producer milk. The diverting handler shall designate the dairy farmer deliveries that shall not be producer milk. If the handler fails to designate the dairy farmer deliveries which are ineligible, producer milk status shall be forfeited with respect to all milk diverted to nonpool plants by such handler; and

(6) The delivery day requirements and the diversion percentages in paragraphs (d)(2) and (d)(3) of this section may be increased or decreased by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested persons. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

§ 1033.14 Other source milk.

See § 1000.14 of this chapter.

§ 1033.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1033.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1033.17 [Reserved]

§ 1033.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1033.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1033.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office receives the report on or before the 7th day after the end of the month, in the detail and on the prescribed forms, as follows:

(a) Each handler that operates a pool plant pursuant to § 1033.7 and each handler described in § 1000.9(c) shall report for each of its operations the following information:

(1) Product pounds, pounds of butterfat, pounds of protein, and the value of the somatic cell adjustment pursuant to § 1000.50(p), contained in or represented by:

(i) Receipts of producer milk, including producer milk diverted by the reporting handler; and

(ii) Receipts of milk from handlers described in § 1000.9(c);

(2) Product pounds and pounds of butterfat contained in:

(i) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(ii) Receipts of other source milk; and

(iii) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products;

(3) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph; and

(4) Such other information with respect to the receipts and utilization of skim milk, butterfat, milk protein, and somatic cell information as the market administrator may prescribe.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been

VOL 63 ISS 20 JA 30 1998 UMI

producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler not specified in paragraphs (a) and (b) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1033.31 Payroll reports.

(a) On or before the 22nd day after the end of each month, each handler that operates a pool plant pursuant to § 1033.7 and each handler described in § 1033.9(c) shall report to the market administrator its producer payroll for the month, in the detail prescribed by the market administrator, showing for each producer the information described in § 1033.73(e).

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1033.32 Other reports.

In addition to the reports required pursuant to §§ 1033.30 and 1033.31, each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1033.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1033.41 [Reserved]

§ 1033.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1033.43 General classification rules.

See § 1000.43 of this chapter.

§ 1033.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1033.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1033.50 Class prices and component prices.

See § 1000.50 of this chapter.

§ 1033.51 Class I differential and price.

The Class I differential shall be the differential established for Cuyahoga County, Ohio which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Cuyahoga County, Ohio.

§ 1033.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1033.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1033.54 Equivalent price.

See § 1000.54 of this chapter.

Producer Price Differential

§ 1033.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of its pool plants, and of each handler described in § 1033.9(c) as follows:

(a) Class I value.

(1) Multiply the hundredweight of skim milk in Class I as determined pursuant to § 1000.44(a) by the Class I skim milk price applicable at the handler's location; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class I as determined pursuant to § 1000.44(b) by the Class I butterfat price applicable at the handler's location;

(b) Add the Class II value computed as follows:

(1) Multiply the hundredweight of skim milk in Class II as determined pursuant to § 1000.44(a) by 70 cents;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class II as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class II as determined pursuant to § 1000.44(b) by the butterfat price;

(c) Add the Class III value computed as follows:

(1) Multiply the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average protein content of producer skim milk received by the handler, and multiply the resulting pounds of protein by the protein price;

(2) Add an amount obtained by subtracting from the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) the pounds of protein determined in § 1033.60(c)(1) and multiplying the resulting pounds of fluid carrier by a price determined by multiplying 5.7 times the other solids price and dividing the result by 91 (the resulting price, rounded to the 4th decimal place, shall be known as the fluid carrier price); and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class III as determined pursuant to § 1000.44(b) by the butterfat price;

(d) Add the Class IV value computed as follows:

(1) Multiply the pounds of skim milk in Class IV as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class IV as determined pursuant to § 1000.44(b) by the butterfat price;

(e) Add an adjustment for the somatic cell content of producer milk determined by multiplying the value reported pursuant to § 1033.30(a)(1) by the percentage of the total producer milk allocated to Class II, Class III, and Class IV pursuant to § 1000.44(c);

(f) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(g) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(h) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from plants regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(i) Add the amount obtained from multiplying the difference between the Class I price and the Class III price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of bulk fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(j) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I pursuant to § 1000.43(d); and

(k) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another order under § 1000.76(a)(5) or (c).

§ 1033.61 Computation of producer price differential.

For each month the market administrator shall compute a producer price differential per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1033.71 for the preceding month shall not be included in the computation of the producer price differential. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the producer price differential in the following manner:

(a) Combine into one total the values computed pursuant to § 1033.60 for all handlers required to file reports prescribed in § 1033.30;

(b) Subtract the total values obtained by multiplying each handler's total pounds of protein, fluid carrier, and butterfat contained in the milk for which an obligation was computed pursuant to § 1033.60 by the protein price, the fluid carrier price, and the butterfat price, respectively, and the total value of the somatic cell adjustment pursuant to § 1033.30(a)(1);

(c) Add an amount equal to the sum of the location adjustments computed pursuant to § 1033.75;

(d) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(e) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(1) The total hundredweight of producer milk; and

(2) The total hundredweight for which a value is computed pursuant to § 1033.60(i); and

(f) Subtract not less than 4 cents nor more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result shall be known as the *producer price differential* for the month.

§ 1033.62 Announcement of producer prices.

On or before the 13th day after the end of each month, the market administrator shall announce publicly the following prices and information:

(a) The producer price differential;

(b) The protein price;

(c) The fluid carrier price;

(d) The butterfat price;

(e) The somatic cell adjustment rate;

(f) The average butterfat and protein content of producer milk; and

(g) The statistical uniform price for milk containing 3.5 percent butterfat, computed by combining the Class III price and the producer price differential.

Payments for Milk

§ 1033.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1033.71 Payments to the producer-settlement fund.

Each handler shall make payment to the producer-settlement fund in a manner that provides receipt of the funds by the market administrator no later than the 15th day after the end of the month. Payment shall be the amount, if any, by which the amount specified in (a) of this section exceeds the amount specified in (b) of this section:

(a) The total value of milk to the handler for the month as determined pursuant to § 1033.60.

(b) The sum of:

(1) An amount obtained by multiplying the total hundredweight of producer milk as determined pursuant to § 1000.44(c) by the producer price differential as adjusted pursuant to § 1033.75;

(2) An amount obtained by multiplying the total pounds of protein and butterfat contained in producer milk by the protein and butterfat prices, respectively;

(3) An amount obtained by multiplying the total hundredweight of fluid carrier contained in producer milk by the fluid carrier price computed pursuant to § 1033.60(c)(2);

(4) The total value of the somatic cell adjustment to producer milk; and

(5) An amount obtained by multiplying the pounds of skim milk and butterfat for which a value was computed pursuant to § 1033.60(i) by the producer price differential as adjusted pursuant to § 1033.75 for the location of the plant from which received.

§ 1033.72 Payments from the producer-settlement fund.

No later than the 16th day after the end of each month, the market administrator shall pay to each handler the amount, if any, by which the amount computed pursuant to § 1033.71(b) exceeds the amount computed pursuant to § 1033.71(a). If, at such time, the balance in the producer-settlement fund is insufficient to make all payments pursuant to this section, the market administrator shall reduce uniformly such payments and shall complete the payments as soon as the funds are available.

§ 1033.73 Payments to producers and to cooperative associations.

(a) Each handler shall pay each producer for producer milk for which payment is not made to a cooperative association pursuant to paragraph (b) of this section, as follows:

(1) *Partial payment.* For each producer who has not discontinued shipments as of the date of this partial payment, payment shall be made so that it is received by each producer on or before the 26th day of the month for milk received during the first 15 days of the month from the producer at not less than the lowest announced class price for the preceding month, less proper deductions authorized in writing by the producer; and

(2) *Final payment.* For milk received during the month, payment shall be

VOL 63 ISS 20 JA 30 1998 UMI

made so that it is received by each producer no later than the 17th day after the end of the month in an amount equal to not less than the sum of:

(i) The hundredweight of producer milk received times the producer price differential for the month as adjusted pursuant to § 1033.75;

(ii) The pounds of butterfat received times the butterfat price for the month;

(iii) The pounds of protein received times the protein price for the month;

(iv) The hundredweight of fluid carrier received times the fluid carrier price for the month;

(v) The hundredweight of milk received times the somatic cell adjustment for the month;

(vi) Less any payment made pursuant to paragraph (a)(1) of this section;

(vii) Less proper deductions authorized in writing by such producer and plus or minus adjustments for errors in previous payments to such producer; and

(viii) Less deductions for marketing services pursuant to § 1000.86.

(b) *Payments for milk received from cooperative associations.* On or before the day prior to the dates specified in paragraphs (a)(1) and (a)(2) of this section, each handler shall pay to a cooperative association for milk received as follows:

(1) *Partial payment to a cooperative association.* For bulk fluid milk/skimmed milk received during the first 15 days of the month from a cooperative association in any capacity, except as the operator of a pool plant, the partial payment shall be equal to the hundredweight of milk received multiplied by the lowest announced class price for the preceding month;

(2) *Partial payment to a cooperative association for milk transferred from its pool plant.* For bulk milk/skimmed milk products received during the first 15 days of the month from a cooperative association in its capacity as the operator of a pool plant, the partial payment shall be at the pool plant operator's estimated use value of the milk using the most recent class prices available, adjusted for butterfat and plant location;

(3) *Final payment to a cooperative association for milk transferred from its pool plant.* Following the classification of bulk fluid milk products and bulk fluid cream products received during the month from a cooperative association in its capacity as the operator of a pool plant, the final payment for such receipts shall be not less than an amount computed by multiplying the respective quantities assigned to each class under § 1000.44 by the value calculated pursuant to § 1033.60(a) and location adjustments pursuant to § 1033.75, minus the amount of the payment made to the association pursuant to paragraph (a)(1) of this section.

(4) *Final payment to a cooperative association for bulk milk received directly from producers' farms.* For bulk milk received from a cooperative association during the month, including the milk of producers who are not members of such association and who the market administrator determines have authorized the cooperative association to collect payment for their milk, the final payment for such milk shall be an amount equal to the sum of the individual payments otherwise payable for such milk pursuant to paragraph (a)(2) of this section.

(c) If a handler has not received full payment from the market administrator pursuant to § 1033.72 by the payment date specified in paragraph (a) or (b) of this section, the handler may reduce payments pursuant to paragraphs (a) and (b) of this section, but not by more than the amount of the underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(d) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund, and in the event that the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant, as the case may be.

(e) In making payments to producers pursuant to this section, each handler shall furnish each producer, except a producer whose milk was received from a cooperative association handler described in § 1000.9(c), a supporting statement in a form that may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and payroll number of the producer;

(2) The daily and total pounds, and the month and dates such milk was received from that producer;

(3) The total pounds of butterfat, protein, and fluid carrier contained in the producer's milk;

(4) The average somatic cell count of the producer's milk;

(5) The minimum rate or rates at which payment to the producer is required pursuant to this order;

(6) The rate used in making payment if the rate is other than the applicable minimum rate;

(7) The amount, or rate per hundredweight, or rate per pound of component, and the nature of each deduction claimed by the handler; and

(8) The net amount of payment to the producer or cooperative association.

§ 1033.74 [Reserved]

§ 1033.75 Plant location adjustments for producer milk and nonpool milk.

(a) The producer price differential for producer milk shall be adjusted according to the location of the plant at which the milk was physically received by subtracting from the price differential the amount by which the Class I price specified in § 1033.51 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1033.51, the difference shall be added to the producer price differential; and

(b) The producer price differential applicable to other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted producer price differential shall not be less than zero.

§ 1033.76 Payments by a handler operating a partially regulated distributing plant.

See § 1000.76 of this chapter.

§ 1033.77 Adjustment of accounts.

Subpart—Order Regulating Handling

General Provisions

§ 1124.1 General provisions.

The terms, definitions, and provisions in Part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1124.2 Pacific Northwest marketing area.

The marketing area means all territory within the bounds of the following states and political subdivisions, including all piers, docks, and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State, or Federal) reservations, installations, institutions, or other similar establishments if any part thereof is within any of the listed states or political subdivisions:

Washington

All of the State of Washington.

Idaho Counties

Benewah, Bonner, Boundary, Kootenai, Latah, and Shoshone.

Oregon Counties

Benton, Clackamas, Clatsop, Columbia, Coos, Crook, Curry, Deschutes, Douglas, Gilliam, Hood River, Jackson, Jefferson, Josephine, Klamath, Lake, Lane, Lincoln, Linn, Marion, Morrow, Multnomah, Polk, Sherman, Tillamook, Umatilla, Wasco, Washington, Wheeler, and Yamhill.

§ 1124.3 Route disposition.

See § 1000.3 of this chapter.

§ 1124.4 Plant.

See § 1000.4 of this chapter.

§ 1124.5 Distributing plant.

See § 1000.5 of this chapter.

§ 1124.6 Supply plant.

See § 1000.6 of this chapter.

§ 1124.7 Pool plant.

Pool plant means a plant, unit of plants, or a system of plants as specified in paragraphs (a) through (f) of this section. The pooling standards described in paragraphs (a), (c), (d), (e), and (f) of this section are subject to modification pursuant to paragraph (g) of this section:

(a) A distributing plant from which during the month:

(1) Total route disposition is equal to 25 percent of more of the total quantity of bulk fluid milk products physically received at the plant; and

(2) Route disposition in the marketing area is at least 15 percent of total route disposition.

(3) For purposes of this section, packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the single purpose of qualifying the transferring plant as a pool distributing plant.

(b) A distributing plant located in the marketing area at which the majority of milk received is processed into aseptically packaged fluid milk products unless there are no sales from the plant into any marketing area and the plant operator in writing requests nonpool plant status for the plant for the month.

(c) A supply plant from which during any month not less than 20 percent of the total quantity of milk that is physically received at such plant from dairy farmers eligible to be producers pursuant to § 1124.12 (excluding milk received at such plant as diverted milk from another plant, which milk is classified in Class III under this order and is subject to the pricing and pooling provisions of this or another order issued pursuant to the Act) or diverted as producer milk to another plant pursuant to § 1124.13, is shipped in the form of a fluid milk product to a pool distributing plant or is a route disposition in the marketing area of fluid milk products processed and packaged at such plant;

(1) A supply plant that has qualified as a pool plant during each of the immediately preceding months of September through February shall continue to so qualify in each of the following months of March through August, unless the plant operator files a written request with the market administrator that such plant not be a pool plant, such nonpool status to be effective the first month following such request and thereafter until the plant qualifies as a pool plant on the basis of milk shipments;

(2) A cooperative association that operates a supply plant may include as qualifying shipments its deliveries to pool distributing plants directly from farms of producers pursuant to § 1000.9(c);

(3) A pool plant operator may include as qualifying shipments milk diverted to pool distributing plants pursuant to § 1124.13(c);

(4) No plant may qualify as a pool plant due to a reduction in the shipping percentage pursuant to paragraph (g) of this section unless it has been a pool supply plant during each of the immediately preceding three months.

(d)–(f) [Reserved]

(g) The applicable shipping percentages of paragraphs (a) and (c) of this section may be increased or decreased by the market administrator if found necessary to obtain needed shipments or to prevent uneconomic shipments. Before making a finding that a change is necessary the market administrator shall investigate the need for revision, either on the market administrator's own initiative or at the request of interested persons. If such

VOL
63
ISS
20
JA
30
1998
UMI

investigation shows that a revision might be appropriate, a notice shall be issued stating that a revision is being considered and inviting data, views, and arguments. If the market administrator determines that an adjustment to the shipping percentages is necessary, the market administrator shall notify the industry within one day of the effective date of such adjustment.

(h) The term pool plant shall not apply to the following plants:

(1) A producer-handler as defined under any Federal order;

(2) An exempt plant as defined in § 1000.8(e);

(3) A plant located within the marketing area and qualified pursuant to paragraph (a) of this section which meets the pooling requirements of another Federal order, and from which more than 50 percent of its route disposition has been in the other Federal order marketing area for three consecutive months;

(4) A plant located outside the marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of another Federal order and has had greater sales in such other Federal order's marketing area for 3 consecutive months;

(5) A plant located in another Federal order marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of such other Federal order and does not have a majority of its route distribution in this marketing area for 3 consecutive months or if the plant is required to be regulated under such other Federal order without regard to its route disposition in any other Federal order marketing area; and

(6) A plant qualified pursuant to paragraph (c) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under the other Federal order than are made to plants regulated under this order, or the plant has automatic pooling status under the other Federal order.

§ 1124.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1124.9 Handler.

See § 1000.9 of this chapter.

§ 1124.10 Producer-handler.

Except as provided in paragraph (f) of this section, *producer-handler* means a person who operates a dairy farm and a distributing plant from which there is monthly route disposition within the marketing area in excess of 150,000 pounds during the month and who has been so designated by the market administrator upon determination that all of the requirements of this section have been met, providing that none of the conditions therein for cancellation of such designation exists.

(a) *Requirements for designation.* The producer-handler provides proof satisfactory to the market administrator that:

(1) In its capacity as a dairy farmer, the care and management of the dairy animals and other resources and facilities (designated as such pursuant to paragraph (b)(1) of this section) necessary to produce all Class I milk handled (excluding receipts from handlers fully regulated under any Federal order); and

(2) In its capacity as a handler, the plant operation at which it processes and packages and from which it distributes its own milk production (designated as such pursuant to paragraph (b)(2) of this section) are under the complete and exclusive control and management of the producer-handler and are at its own enterprise and at its sole risk.

(3) The producer-handler neither receives at its designated milk production resources and facilities nor receives, handles, processes or distributes at or through any of its designated milk handling, processing or distributing resources and facilities other source milk products for reconstitution into fluid milk products, or fluid milk products derived from any source other than:

(i) Its designated milk production resources and facilities (own farm production);

(ii) Pool handlers and plants regulated under any Federal order within the limitation specified in paragraph (c)(2) of this section; or

(iii) nonfat milk solids which are used to fortify fluid milk products.

(4) The producer-handler is neither directly nor indirectly associated with the business control or management of, nor has a financial interest in, another handler's operation; nor is any other handler so associated with the producer-handler's operation.

(5) Designation of any person as a producer-handler following a cancellation of its prior designation shall be preceded by performance in accordance with paragraph (a)(1) through (4) of this section for a period of 1 month.

(b) *Designation of resources and facilities.* Designation of a person as a producer-handler shall include the determination and designation of the milk production, handling, processing and distributing resources and facilities, all of which shall be deemed to constitute an integrated operation, as follows:

(1) As milk production resources and facilities. All resources and facilities (milking herd(s), buildings housing such herd(s), and the land on which such buildings are located) used for the production of milk:

(i) Which are directly, indirectly or partially owned, operated or controlled by the producer-handler;

(ii) In which the producer-handler in any way has an interest, including any contractual arrangement; and

(iii) Which are directly, indirectly or partially owned, operated or controlled by any partner or stockholder of the producer-handler. However, for purposes of this paragraph, any such milk production resources and facilities which the producer-handler proves to the satisfaction of the market administrator do not constitute an actual or potential source of milk supply for the producer-handler's operation as such shall not be considered a part of the producer-handler's milk production resources and facilities.

(2) As milk handling, processing and distributing resources and facilities. All resources and facilities (including store outlets) used for handling, processing and distributing any fluid milk product:

(i) Which are directly, indirectly or partially owned, operated or controlled by the producer-handler; or

(ii) In which the producer-handler in any way has an interest, including any contractual arrangement, or with respect to which the producer-handler directly or indirectly exercises any degree of management or control.

(3) All designations shall remain in effect until canceled pursuant to paragraph (c) of this section.

(c) *Cancellation.* The designation as a producer-handler shall be canceled upon determination by the market administrator that any of the requirements of paragraph (a)(1) through (4) of this section are not continuing to be met, or under any of the following conditions:

(1) Milk from the milk production resources and facilities of the producer-handler, designated in paragraph (b)(1) of this section is delivered in the name of another person as producer milk to another handler;

(2) The producer-handler handles fluid milk products derived from sources other than the milk production facilities and resources designated in paragraph (b)(1) of this section, except that it may receive at its plant or acquire for route disposition fluid milk products from fully regulated plants and handlers under any Federal order if such receipts do not exceed 150,000 pounds monthly. This limitation shall not apply if the producer-handler's own farm production is less than 150,000 pounds during the month; or

(3) The producer-handler disposes of fluid milk products using the distribution system of another handler, except for direct deliveries by the producer-handler to retail outlets or to a pool handler's plant.

(4) Cancellation of a producer-handler's status pursuant to this paragraph shall be effective on the first day of the month following the month in which the requirements were not met, or the conditions for cancellation occurred.

(d) *Public announcement.* The market administrator shall publicly announce the name, plant location and farm location(s) of persons designated as producer-handlers, of those whose designations have been canceled, and the effective dates of producer-handler status or loss of producer-handler status for each. Such announcements shall be controlling with respect to the accounting at plants of other handlers for fluid milk products received from any producer-handler.

(e) *Burden of establishing and maintaining producer-handler status.* The burden rests upon the handler who is designated as a producer-handler to establish through records required pursuant to § 1000.5 that the requirements set forth in paragraph (a) of this section have been and are continuing to be met, and that the conditions set forth in paragraph (c) of this section for cancellation of designation do not exist.

(f) *Producer-handler* shall not include any producer who also operates a distributing plant if the producer-handler so requests that the two be operated as separate entities with the distributing plant regulated pursuant to § 1124.7(a) and the farm operated as a producer pursuant to § 1124.12.

§ 1124.11 Cooperative reserve supply unit.

Cooperative reserve supply unit means any cooperative association or its agent that is a handler pursuant to § 1000.9(c) that does not own or operate a plant, if such cooperative has been qualified to receive payments pursuant to § 1124.73 and has been a handler of producer milk under this or its predecessor order during each of the 12 previous months, and if a majority of the cooperative's member producers are located within 125 miles of a pool distributing plant. A cooperative reserve supply unit shall be subject to the following conditions:

(a) The cooperative shall file a request with the market administrator for cooperative reserve supply unit status at least 15 days prior to the first day of the month in which such status is desired to be effective. Once qualified as a cooperative reserve supply unit pursuant to this paragraph, such status shall continue to be effective unless the cooperative requests termination prior to the first day of the month that change of status is requested, or the cooperative fails to meet all of the conditions of this section;

(b) The cooperative reserve supply unit supplies fluid milk products to pool distributing plants located within 125 miles of a majority of the cooperative's member producers in compliance with any announcement by the market administrator requesting a minimum level of shipments as further provided below:

(1) The market administrator may require such supplies of bulk fluid milk from cooperative reserve supply units whenever the market administrator finds that milk supplies for Class I use are needed for plants defined in § 1124.7(a) or (b). Before making such a finding, the market administrator shall investigate the need for such shipments either on the market administrator's own initiative or at the request of interested persons. If the market administrator's investigation shows that such shipments might be appropriate, the market administrator shall issue a notice stating that a shipping announcement is being considered and inviting data, views and arguments with respect to the proposed shipping announcement.

(2) Failure of a cooperative reserve supply unit to comply with any announced shipping requirements, including making any significant change in the unit's marketing operation that the market administrator determines has the impact of evading or forcing such an announcement, shall result in immediate loss of cooperative reserve supply unit status until such time as the unit has been a handler pursuant to § 1000.9(c) for at least 12 consecutive months.

§ 1124.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk (or components of milk) is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1124.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1124.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I;

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order; and

(5) A dairy farmer whose milk, at any time during the month, has been pooled under a State milk order.

§ 1124.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk), including nonfat components, and butterfat in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of a pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it is picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants;

(c) Diverted by a pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or a cooperative association described in § 1000.9(c) to a nonpool plant, subject to the following conditions:

(1) Of the quantity of producer milk received during the month (including diversions, but excluding the quantity of producer milk received from a handler described in § 1000.9(c)) the handler diverts to nonpool plants not more than 65 percent during the months of

VOL 63 ISS 20 JA 30 1998 UMI

September through November and January, and not more than 75 percent during the months of February through August and December;

(3) Diverted milk shall be priced at the location of the plant to which diverted;

(4) Any milk diverted in excess of the limits prescribed in paragraph (d)(2) of this section shall not be producer milk. If the diverting handler or cooperative association fails to designate the dairy farmers' deliveries that are not to be producer milk, no milk diverted by the handler or cooperative association during the month to a nonpool plant shall be producer milk; and

(5) The applicable diversion limits in paragraph (d)(2) of this section may be increased or decreased by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested persons. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments.

Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

§ 1124.14 Other source milk.

See § 1000.14 of this chapter.

§ 1124.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1124.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1124.17 [Reserved]

§ 1124.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1124.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1124.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office receives the report on or before the 9th day after the end of the month, in the detail and on the prescribed forms, as follows:

(a) Each handler that operates a pool plant pursuant to § 1124.7 and each handler described in § 1000.9(c) shall report for each of its operations the following information:

(1) Product pounds, pounds of butterfat, pounds of protein, and pounds of solids-not-fat other than protein (other solids) contained in or represented by:

(i) Receipts of producer milk, including producer milk diverted by the handler; and

(ii) Receipts of milk from handlers described in § 1000.9(c);

(2) Product pounds and pounds of butterfat contained in:

(i) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(ii) Receipts of other source milk; and

(iii) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products;

(3) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph; and

(4) Such other information with respect to the receipts and utilization of skim milk, butterfat, milk protein, and other nonfat solids, as the market administrator may prescribe.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler not specified in paragraphs (a) and (b) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1124.31 Payroll reports.

(a) On or before the 20th day after the end of each month, each handler that operates a pool plant pursuant to § 1124.7 and each handler described in § 1000.9(c) shall report to the market administrator its producer payroll for the month, in the detail prescribed by the market administrator, showing for each producer the information described in § 1124.73(f).

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1124.32 Other reports.

In addition to the reports required pursuant to §§ 1124.30 and 1124.31, each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1124.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1124.41 [Reserved]

§ 1124.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1124.43 General classification rules.

See § 1000.43 of this chapter.

§ 1124.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1124.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1124.50 Class prices and component prices.

See § 1000.50 of this chapter.

§ 1124.51 Class I differential and price.

The Class I differential shall be the differential established for King County, Washington, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for King County, Washington.

§ 1124.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1124.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1124.54 Equivalent price.

See § 1000.54 of this chapter.

Producer Price Differential

§ 1124.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of its pool plants, and of each handler described in § 1000.9(c) as follows:

(a) Class I value.

(1) Multiply the hundredweight of skim milk in Class I as determined pursuant to § 1000.44(a) by the Class I skim milk price applicable at the handler's location; and

(2) Add an amount obtained by multiplying the pounds of butterfat in

Class I as determined pursuant to § 1000.44(b) by the Class I butterfat price applicable at the handler's location.

(b) Add the Class II value, computed as follows:

(1) Multiply the hundredweight of skim milk in Class II as determined pursuant to § 1000.44(a) by 70 cents;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class II as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price;

(3) Add an amount obtained by multiplying the pounds of butterfat in Class II as determined pursuant to § 1000.44(b) by the butterfat price;

(c) Add the Class III value computed as follows:

(1) Multiply the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average protein content of producer skim milk received by the handler, and multiply the resulting pounds of protein by the protein price;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average other solids content of producer skim milk received by the handler, and multiply the resulting pounds of other solids by the other solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class III as determined pursuant to § 1000.44(b) by the butterfat price;

(d) Add the Class IV value computed as follows:

(1) Multiply the pounds of skim milk in Class IV as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class IV as determined pursuant to § 1000.44(b) by the butterfat price;

(e) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(f) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(g) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(h) Add the amount obtained from multiplying the difference between the Class I price and the Class III price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of bulk fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(i) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicale at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I pursuant to § 1000.43(d); and

(j) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another order under § 1000.76(a)(5) or (c).

§ 1124.61 Computation of producer price differential.

For each month the market administrator shall compute a producer price differential per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1124.71 for the preceding month shall not be included in the computation of the producer price differential. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the producer price differential in the following manner:

(a) Combine into one total the values computed pursuant to § 1124.60 for all handlers required to file reports prescribed in § 1124.30;

(b) Subtract the total values obtained by multiplying each handler's total pounds of protein, other solids, and butterfat contained in the milk for which an obligation was computed pursuant to § 1124.60 by the protein price, the other solids price, and the butterfat price, respectively;

(c) Add an amount equal to the sum of the location adjustments computed pursuant to § 1124.75;

(d) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(e) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(1) The total hundredweight of producer milk; and

(2) The total hundredweight for which a value is computed pursuant to § 1124.60(i); and

(f) Subtract not less than 4 cents nor more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result shall be known as the *producer price differential* for the month.

§ 1124.62 Announcement of producer prices.

On or before the 14th day after the end of each month, the market administrator shall announce publicly the following prices and information:

(a) The producer price differential;

(b) The protein price;

(c) The other solids price;

(d) The butterfat price;

(e) The average butterfat, protein and other solids content of producer milk; and

(f) The statistical uniform price for milk containing 3.5 percent butterfat, computed by combining the Class III price and the producer price differential.

VOL 63 ISS 20 JA 30 1998 UMI

Payment for Milk

§ 1124.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1124.71 Payments to the producer-settlement fund.

Each handler shall make payment to the producer-settlement fund in a manner that provides receipt of the funds by the market administrator no later than the 16th day after the end of the month. Payment shall be the amount, if any, by which the amount specified in (a) of this section exceeds the amount specified in (b) of this section:

(a) The total value of milk to the handler for the month as determined pursuant to § 1124.60.

(b) The sum of:

(1) An amount obtained by multiplying the total hundredweight of producer milk as determined pursuant to § 1000.44(c) by the producer price differential as adjusted pursuant to § 1124.75;

(2) An amount obtained by multiplying the total pounds of protein, other solids, and butterfat contained in producer milk by the protein, other solids, and butterfat prices respectively; and

(3) An amount obtained by multiplying the pounds of skim milk and butterfat for which a value was computed pursuant to § 1124.60(i) by the producer price differential as adjusted pursuant to § 1124.75 for the location of the plant from which received.

§ 1124.72 Payments from the producer-settlement fund.

No later than the 18th day after the end of each month, the market administrator shall pay to each handler the amount, if any, by which the amount computed pursuant to § 1124.71(b) exceeds the amount computed pursuant to § 1124.71(a). If, at such time, the balance in the producer-settlement fund is insufficient to make all payments pursuant to this section, the market administrator shall reduce uniformly such payments and shall complete the payments as soon as the funds are available.

§ 1124.73 Payments to producers and to cooperative associations.

(a) Each handler shall pay each producer for producer milk for which payment is not made to a cooperative association pursuant to paragraph (b) of this section, as follows:

(1) *Partial payment.* For each producer who has not discontinued shipments as of the 18th day of the month, partial payment shall be made so that it is received by each producer on or before the last day of the month for milk received during the first 15 days of the month from the producer at not less than the lowest announced class price for the preceding month, less proper deductions authorized in writing by the producer; and

(2) *Final payment.* For milk received during the month, payment shall be made so that it is received by each producer no later than the 19th day after the end of the month in an amount equal to not less than the sum of:

(i) The hundredweight of producer milk received times the producer price differential for the month as adjusted pursuant to § 1124.75;

(ii) The pounds of butterfat received times the butterfat price for the month;

(iii) The pounds of protein received times the protein price for the month;

(iv) The pounds of other solids received times the other solids price for the month;

(v) Less any payment made pursuant to paragraph (a)(1) of this section;

(vi) Less proper deductions authorized in writing by such producer and plus or minus adjustments for errors in previous payments to such producer; and

(vii) Less deductions for marketing services pursuant to § 1000.86.

(b) *Payments for milk received from cooperative association members.* On or before the 2nd day prior to the dates specified in paragraphs (a)(1) and (a)(2) of this section, each handler shall pay to a cooperative association for milk from producers who market their milk through the cooperative association and who have authorized the cooperative to collect such payments on their behalf an amount equal to the sum of the individual payments otherwise payable for such producer milk pursuant to paragraphs (a)(1) and (a)(2) of this section.

(c) *Payment for milk received from cooperative association pool plants or from cooperatives as handlers pursuant to § 1000.9(c).* On or before the 2nd day prior to the dates specified in paragraph (a)(1) and (a)(2) of this section, each handler who receives fluid milk products at its plant from a cooperative association in its capacity as the operator of a pool plant or who receives milk from a cooperative association in its capacity as a handler pursuant to § 1000.9(c), including the milk of producers who are not members of such association and who the market administrator determines have authorized the cooperative association to collect payment for their milk, shall pay the cooperative for such milk as follows:

(1) For bulk fluid milk products and bulk fluid cream products received from a cooperative association in its capacity as the operator of a pool plant and for milk received from a cooperative association in its capacity as a handler pursuant to § 1000.9(c) during the first 15 days of the month, at not less than the lowest announced class price per hundredweight for the preceding month;

(2) For the total quantity of bulk fluid milk products and bulk fluid cream products received from a cooperative association in its capacity as the operator of a pool plant, at not less than the total value of such products received from the association's pool plants, as determined by multiplying the respective quantities assigned to each class under § 1000.44, as follows:

(i) The hundredweight of Class I skim milk times the Class I skim milk price for the month plus the pounds of Class I butterfat times the Class I butterfat price for the month. The Class I price to be used shall be that price effective at the location of the shipping plant;

(ii) The hundredweight of Class II skim milk times $ .70;

(iii) The pounds of nonfat solids received in Class II and Class IV milk times the nonfat solids price for the month;

(iv) The pounds of butterfat received in Class II, Class III, and Class IV milk times the butterfat price for the month;

(v) The pounds of protein received in Class III milk times the protein price for the month;

(vi) The pounds of other solids received in Class III milk times the other solids price for the month; and

(vii) Add together the amounts computed in paragraphs (c)(2)(i) through (vi) of this section and from that sum deduct any payment made pursuant to paragraph (c)(1) of this section.

(3) For the total quantity of milk received during the month from a cooperative association in its capacity as a handler under § 1000.9(c) as follows:

(i) The hundredweight of producer milk received times the producer price differential as adjusted pursuant to § 1124.75;

(ii) The pounds of butterfat received times the butterfat price for the month;

(iii) The pounds of protein received times the protein price for the month;

(iv) The pounds of other solids received times the other solids price for the month; and

(v) Add together the amounts computed in paragraphs (c)(3)(i) through (iv) of this section and from that sum deduct any payment made pursuant to paragraph (c)(1) of this section.

(d) If a handler has not received full payment from the market administrator pursuant to § 1124.72 by the payment date specified in paragraph (a), (b) or (c) of this section, the handler may reduce pro rata its payments to producers or to the cooperative association (with respect to receipts described in paragraph (b), prorating the underpayment to the volume of milk received from the cooperative association in proportion to the total milk received from producers by the handler), but not by more than the amount of the underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(e) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund, and in the event that the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant, as the case may be.

(f) In making payments to producers pursuant to this section, each handler shall furnish each producer, except a producer whose milk was received from a cooperative association handler described in § 1000.9(a) or (c), a supporting statement in a form that may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and payroll number of the producer;

(2) The daily and total pounds, and the month and dates such milk was received from that producer;

(3) The total pounds of butterfat, protein, and other solids contained in the producer's milk;

(4) The minimum rate or rates at which payment to the producer is required pursuant to this order;

(5) The rate used in making payment if the rate is other than the applicable minimum rate;

(6) The amount, or rate per hundredweight, or rate per pound of component, and the nature of each deduction claimed by the handler; and

(7) The net amount of payment to the producer or cooperative association.

§ 1124.74 [Reserved]

§ 1124.75 Plant location adjustments for producer milk and nonpool milk.

(a) The producer price differential for producer milk shall be adjusted according to the location of the plant at which the milk was physically received by subtracting from the price differential the amount by which the Class I price specified in § 1124.51 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1124.51, the difference shall be added to the producer price differential; and

(b) The producer price differential applicable to other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted producer price differential shall not be less than zero.

§ 1124.76 Payments by a handler operating a partially regulated distributing plant.

Subpart—Order Regulating Handling

General Provisions

§ 1126.1 General provisions.

The terms, definitions, and provisions in part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1126.2 Southwest marketing area.

The marketing area means all territory within the bounds of the following states and political subdivisions, including all piers, docks and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State or Federal) reservations, installations, institutions, or other similar establishments if any part

VOL 63 ISS 20 JA 30 1998 UMI

thereof is within any of the listed states or political subdivisions:

New Mexico and Texas

All of the States of New Mexico and Texas.

Colorado Counties

Archuleta, LaPlata, and Montezuma.

§ 1126.3 Route disposition.

See § 1000.3 of this chapter.

§ 1126.4 Plant.

See § 1000.4 of this chapter.

§ 1126.5 Distributing plant.

See § 1000.5 of this chapter.

§ 1126.6 Supply plant.

See § 1000.6 of this chapter.

§ 1126.7 Pool plant.

Pool plant means a plant specified in paragraphs (a) through (d) of this section, or a unit of plants as specified in paragraph (e) of this section, but excluding a plant specified in paragraph (g) of this section. The pooling standards described in paragraphs (a), (c), and (d) of this section are subject to modification pursuant to paragraph (f) of this section:

(a) A distributing plant from which during the month the total route disposition is equal to 25 percent or more of the total quantity of fluid milk products physically received at such plant and route disposition in the marketing area is at least 15 percent of total route distribution. Packaged fluid milk products that are transferred to a distributing plant and which are classified as Class I milk shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the single purpose of determining the transferring plant's pool status under this paragraph.

(b) A distributing plant located in the marketing area at which the majority of milk received is processed into aseptically packaged fluid milk products unless there are no sales from the plant into any marketing area and the plant operator in writing requests nonpool status for the plant for the month.

(c) A supply plant from which 50 percent of the total quantity of milk that is physically received during the month from dairy farmers and handlers described in § 1000.9(c) is transferred to pool distributing plants.

(d) A plant located within the marketing area that is operated by a cooperative association if pool plant status under this paragraph is requested for such plant by the cooperative association and during the month at least 30 percent of the producer milk of members of such cooperative association is delivered directly from farms to pool distributing plants or is transferred to such plants as a fluid milk product from the cooperative's plant.

(e) Two or more plants operated by the same handler and located within the marketing area may qualify for pool status as a unit by meeting the total and in-area route disposition requirements specified in paragraph (a) of this section and the following additional requirements:

(1) At least one of the plants in the unit must qualify as a pool plant pursuant to paragraph (a) of this section;

(2) Other plants in the unit must process only Class I or Class II products and must be located in a pricing zone providing the same or a lower Class I price than the price applicable at the distributing plant included in the unit pursuant to paragraph (e)(1) of this section; and

(3) A written request to form a unit, or to add or remove plants from a unit, must be filed with the market administrator prior to the first day of the month for which it is to be effective.

(f) The applicable percentages in paragraphs (a), (c), and (d) of this section may be increased or decreased up to 10 percentage points by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested parties if the request is made in writing at least 15 days prior to the date for which the requested revision is desired effective. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

(g) The term pool plant shall not apply to the following plants:

(1) A producer-handler plant;

(2) An exempt plant as defined in § 1000.8(e);

(3) A plant qualified pursuant to paragraph (a) of this section that is located within the marketing area if the plant also meets the pooling requirements of another Federal order, and more than 50 percent of its route distribution has been in such other Federal order marketing area for 3 consecutive months;

(4) A plant qualified pursuant to paragraph (a) of this section which is not located within any Federal order marketing area that meets the pooling requirements of another Federal order and has had greater sales in such other Federal order's marketing area for 3 consecutive months;

(5) A plant qualified pursuant to paragraph (a) of this section that is located in another Federal order marketing area if the plant meets the pooling requirements of such other Federal order and does not have a majority of its route distribution in this marketing area for 3 consecutive months or if the plant is required to be regulated under such other Federal order without regard to its route disposition in any other Federal order marketing area;

(6) A plant qualified pursuant to paragraph (c) or (d) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under the other Federal order than are made to plants regulated under this order, or the plant has automatic pooling status under the other Federal order; and

(7) That portion of a pool plant designated as a nonpool plant that is physically separate and operated separately from the pool portion of such plant. The designation of a portion of a regulated plant as a nonpool plant must be requested in writing by the handler and must be approved by the market administrator.

§ 1126.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1126.9 Handler.

See § 1000.9 of this chapter.

§ 1126.10 Producer-handler.

Except as provided in paragraph (g) of this section, *producer-handler* means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds during the month;

(b) Receives no fluid milk products from sources other than own farm production, pool handlers, and plants fully regulated under another Federal order.

(c) Receives no more than 150,000 pounds of fluid milk products from handlers fully regulated under any Federal order, including such products received at a location other than the producer-handler's processing plant for distribution on routes. This limitation shall not apply if the producer-handler's own farm production is less than 150,000 pounds during the month.

(d) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own farm production or pool handlers;

(e) Disposes of no fluid milk products using the distribution system of another handler except for direct deliveries to retail outlets or to a pool handler's plant;

(f) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled (excluding receipts from handlers fully regulated under any Federal order) and the processing, packaging, and distribution operations are the producer-handler's own enterprise and at its own risk; and

(g) Producer-handler shall not include any producer who also operates a distributing plant if the producer-handler so requests that the two be operated as separate entities with the distributing plant regulated under § 1126.7(a) and the farm operated as a producer under § 1126.12.

§ 1126.11 [Reserved]

§ 1126.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk (or components of milk) is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1126.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1126.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and the milk is allocated by request to a utilization other than Class I; and

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order.

§ 1126.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk), including nonfat components, and butterfat contained in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of a pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it is picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants;

(c) Diverted by a pool plant operator for the account of the handler operating such plant to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or a handler described in § 1000.9(c) to a nonpool plant, subject to the following conditions:

(1) Milk of a producer whose dairy farm is located outside the marketing area shall not be eligible for diversion unless at least 15% of the producer's milk is physically received at a pool plant during the month;

(2) The total quantity of milk so diverted during the month by a cooperative association shall not exceed the total quantity of producer milk that the cooperative association caused to be delivered to, and physically received at, pool plants during the month;

(3) The operator of a pool plant that is not a cooperative association may divert any milk that is not under the control of a cooperative association that diverts milk during the month pursuant to this paragraph. The total quantity of milk so diverted during the month shall not exceed the total quantity of the producer milk physically received at such plant (or such unit of plants in the case of plants that pool as a unit pursuant to § 1126.7(e)) during the month;

(4) Any milk diverted in excess of the limits prescribed in paragraphs (d)(2) and (3) of this section shall not be producer milk. If the diverting handler or cooperative association fails to designate the dairy farmers' deliveries that will not be producer milk, no milk diverted by the handler or cooperative association shall be producer milk;

(5) Diverted milk shall be priced at the location of the plant to which diverted; and

(6) The delivery day requirements in paragraph (d)(1) and the diversion percentages in paragraphs (d)(2) and (3) of this section may be increased or decreased by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested persons. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

§ 1126.14 Other source milk.

See § 1000.14 of this chapter.

§ 1126.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1126.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1126.17 [Reserved]

§ 1126.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1126.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1126.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office receives the report on or before the 8th day after the end of the month, in the detail and on prescribed forms, as follows:

(a) Each pool plant operator and each handler described in § 1000.9(c), shall report for each of its operations the following information:

(1) Product pounds, pounds of butterfat, pounds of protein, pounds of nonfat solids other than protein (other solids), and the value of the somatic cell adjustment pursuant to § 1000.50(p) contained in or represented by:

(i) Receipts of producer milk, including producer milk diverted by the reporting handler; and

(ii) Receipts of milk from handlers described in § 1000.9(c);

(2) Product pounds and pounds of butterfat contained in:

VOL 63 ISS 20 JA 30 1998 UMI

(i) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(ii) Receipts of other source milk; and

(iii) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products; and

(3) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph; and

(4) Such other information with respect to the receipts and utilization of skim milk, butterfat, milk protein, other nonfat solids, and somatic cell information, as the market administrator may prescribe.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler not specified in paragraphs (a) or (b) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1126.31 Payroll reports.

(a) On or before the 20th day after the end of each month, each handler that operates a pool plant pursuant to § 1126.7 and each handler described in § 1000.9(c) shall report to the market administrator its producer payroll for the month, in the detail prescribed by the market administrator, showing for each producer the information specified in § 1126.73(e);

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1126.32 Other reports.

In addition to the reports required pursuant to §§ 1126.30 and 1126.31, each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1126.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1126.41 [Reserved]

§ 1126.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1126.43 General classification rules.

See § 1000.43 of this chapter.

§ 1126.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1126.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1126.50 Class prices and component prices.

See § 1000.50 of this chapter.

§ 1126.51 Class I differential and price.

The Class I differential shall be the differential established for Dallas County, Texas, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Dallas County, Texas.

§ 1126.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1126.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1126.54 Equivalent price.

See § 1000.54 of this chapter.

Producer Price Differential

§ 1126.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) as follows:

(a) Class I value.

(1) Multiply the hundredweight of skim milk in Class I as determined pursuant to § 1000.44(a) by the Class I skim milk price applicable at the handler's location; and

(2) Add an amount obtained by multiplying the total pounds of butterfat in Class I as determined pursuant to § 1000.44(b) by the Class I butterfat price applicable at the handler's location.

(b) Add the Class II value, computed as follows:

(1) Multiply the hundredweight of milk in Class II as determined pursuant to § 1000.44(a) by 70 cents;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class II as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiplying the resulting pounds of nonfat solids by the nonfat solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class II as determined pursuant to § 1000.44(b) by the butterfat price.

(c) Add the Class III value, computed as follows:

(1) Multiply the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average protein content of producer skim milk received by the handler, and multiply the resulting pounds of protein by the protein price;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average other solids content of producer skim milk received by the handler, and multiplying the resulting pounds of other solids by the other solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class III as determined pursuant to § 1000.44(b) by the butterfat price.

(d) Add the Class IV value, computed as follows:

(1) Multiply the pounds of skim milk in Class IV as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class IV as determined pursuant to § 1000.44(b) by the butterfat price.

(e) Add an adjustment for somatic cell content of producer milk as determined by multiplying the value reported pursuant to § 1126.30(a)(1) by the percentage of the total producer milk allocated to Class II, Class III, and Class IV pursuant to § 1000.44(c).

(f) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(g) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(h) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(i) Add the amount obtained from multiplying the difference between the Class I price and the Class III price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of bulk fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(j) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I use pursuant to § 1000.43(d); and

(k) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(5) or (c).

§ 1126.61 Computation of producer price differential.

For each month the market administrator shall compute a producer price differential per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1126.71 for the preceding month shall not be included in the computation of the producer price differential. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the producer price differential in the following manner:

(a) Combine into one total the values computed pursuant to § 1126.60 for all handlers required to file reports prescribed in § 1126.30;

(b) Subtract the total of the values obtained by multiplying each handler's total pounds of protein, other solids, and butterfat contained in the milk for which an obligation was computed pursuant to § 1126.60 by the protein price, other solids price, and the butterfat price, respectively, and the total value of the somatic cell adjustment pursuant to § 1126.30(a)(1);

(c) Add an amount equal to the sum of the location adjustments computed pursuant to § 1126.75;

(d) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(e) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(1) The total hundredweight of producer milk; and

(2) The total hundredweight for which a value is computed pursuant to § 1126.60(i); and

(f) Subtract not less than 4 cents nor more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result shall be known as the *producer price differential* for the month.

§ 1126.62 Announcement of producer prices.

On or before the 13th day after the end of each month, the market administrator shall announce the following prices and information:

(a) The producer price differential;

(b) The protein price;

(c) The other solids price;

(d) The butterfat price;

(e) The somatic cell adjustment rate;

(f) The average butterfat, nonfat solids, protein, and other solids content of producer milk; and

(g) The statistical uniform price for milk containing 3.5 percent butterfat, computed by combining the Class III price and the producer price differential.

Payments for Milk

§ 1126.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1126.71 Payments to the producer-settlement fund.

Each handler shall make payment to the producer-settlement fund in a manner that provides receipt of the funds by the market administrator no later than the 16th day after the end of the month. Payment shall be the amount, if any, by which the amount specified in paragraph (a) of this section exceeds the amount specified in paragraph (b) of this section:

(a) The total value of milk to the handler for the month as determined pursuant to § 1126.60.

(b) The sum of:

(1) An amount obtained by multiplying the total hundredweight of producer milk as determined pursuant to § 1000.44(c) by the producer price differential as adjusted pursuant to § 1126.75;

(2) An amount obtained by multiplying the total pounds of protein, other solids, and butterfat contained in producer milk by the protein, other solids, and butterfat prices respectively;

(3) The total value of the somatic cell adjustment to producer milk; and

(4) An amount obtained by multiplying the pounds of skim milk and butterfat for which a value was computed pursuant to § 1126.60(i) by the producer price differential as adjusted pursuant to § 1126.75 for the location of the plant from which received.

§ 1126.72 Payments from the producer-settlement fund.

No later than the 17th day after the end of each month, the market administrator shall pay to each handler the amount, if any, by which the amount computed pursuant to § 1126.71(b) exceeds the amount computed pursuant to § 1126.71(a). If, at such time, the balance in the producer-settlement fund is insufficient to make all payments pursuant to this section, the market administrator shall reduce uniformly such payments and shall complete the payments as soon as the funds are available.

§ 1126.73 Payments to producers and to cooperative associations.

(a) Each handler shall pay each producer for producer milk for which payment is not made to a cooperative association pursuant to paragraph (b) of this section, as follows:

(1) *Partial payment.* For each producer who has not discontinued shipments as of the 23rd day of the

VOL 63 ISS 20 JA 30 1998 UMI

month, payment shall be made so that it is received by the producer on or before the 26th day of the month for milk received during the first 15 days of the month at not less than the lowest announced class price for the preceding month, less proper deductions authorized in writing by the producer; and

(2) *Final payment.* For milk received during the month, payment shall be made so that it is received by each producer no later than the 18th day after the end of the month in an amount computed as follows:

(i) Multiply the hundredweight of producer milk received times the producer price differential for the month as adjusted pursuant to § 1126.75;

(ii) Multiply the pounds of butterfat received times the butterfat price for the month;

(iii) Multiply the pounds of protein received times the protein price for the month;

(iv) Multiply the pounds of other solids received times the other solids price for the month;

(v) Multiply the hundredweight of milk received times the somatic cell adjustment for the month;

(vi) Add the amounts computed in paragraph (a)(2)(i) through (v) of this section, and from that sum:

(A) Subtract the partial payment made pursuant to paragraph (a)(1) of this section;

(B) Subtract the deduction for marketing services pursuant to § 1000.86;

(C) Add or subtract for errors made in previous payments to the producer; and

(D) Subtract proper deductions authorized in writing by the producer.

(b) On or before the day prior to the dates specified for partial and final payments pursuant to paragraph (a) of this section, each pool plant operator shall pay a cooperative association for milk received as follows:

(1) *Partial payment to a cooperative association.* For bulk milk/skimmed milk received during the first 15 days of the month from a cooperative association in any capacity, except as the operator of a pool plant, the payment shall be equal to the hundredweight of milk received multiplied by the lowest announced class price for the preceding month;

(2) *Partial payment to a cooperative association for milk transferred from its pool plant.* For bulk milk/skimmed milk products received during the first 15 days of the month from a cooperative association in its capacity as the operator of a pool plant, the partial payment shall be at the pool plant operator's estimated use value of the milk using the most recent class prices available, adjusted for butterfat value and plant location;

(3) *Final payment to a cooperative association for milk transferred from its pool plant.* Following the classification of bulk fluid milk products and bulk fluid cream products received during the month from a cooperative association in its capacity as the operator of a pool plant, the final payment for such receipts shall be determined as follows:

(i) Multiply the hundredweight of Class I skim milk by the Class I skim milk price for the month applicable at the location of the shipping plant;

(ii) Multiply the pounds of Class I butterfat by the Class I butterfat price for the month applicable at the location of the shipping plant;

(iii) Multiply the hundredweight of Class II skim milk by $.70;

(iv) Multiply the pounds of nonfat solids received in Class II and Class IV milk by the nonfat solids price for the month;

(v) Multiply the hundredweight of butterfat in Class II, III, and IV milk by the butterfat price for the month;

(vi) Multiply the pounds of protein received in Class III milk by the protein price for the month;

(vii) Multiply the pounds of other solids received in Class III milk by the other solids price for the month;

(viii) Multiply the hundredweight of Class II, Class III, and Class IV milk received times the somatic cell adjustment;

(ix) Add together the amounts computed in paragraph (b)(3)(i) through (viii) of this section and from that sum deduct any payment made pursuant to paragraph (b)(2) of this section.

(4) *Final payment to a cooperative association for bulk milk received directly from producers' farms.* For bulk milk received from a cooperative association during the month, including the milk of producers who are not members of such association and who the market administrator determines have authorized the cooperative association to collect payment for their milk, the final payment for such milk shall be an amount equal to the sum of the individual payments otherwise payable for such milk pursuant to paragraph (a)(2) of this section.

(c) If a handler has not received full payment from the market administrator pursuant to § 1126.72 by the payment date specified in paragraph (a) or (b) of this section, the handler may reduce pro rata its payments to producers or to cooperative associations pursuant to paragraphs (a) and (b) of this section, but by not more than the amount of the underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(d) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund, and in the event that the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant as the case may be.

(e) In making payments to producers pursuant to this section, each pool plant operator shall furnish each producer, except a producer whose milk was received from a cooperative association handler described in § 1000.9(a) or (c), a supporting statement in a form that may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and the payroll number of the producer;

(2) The month and dates that milk was received from the producer, including the daily and total pounds of milk received;

(3) The total pounds of butterfat, protein, and other solids contained in the producer's milk;

(4) The somatic cell count of the producer's milk;

(5) The minimum rate or rates at which payment to the producer is required pursuant to this order;

(6) The rate used in making payment if the rate is other than the applicable minimum rate;

(7) The amount, or rate per hundredweight, or rate per pound of component, and the nature of each deduction claimed by the handler; and

(8) The net amount of payment to the producer or cooperative association.

§ 1126.74 [Reserved]

§ 1126.75 Plant location adjustments for producer milk and nonpool milk.

(a) The producer price differential for producer milk shall be adjusted according to the location of the plant at which the milk was physically received by subtracting from the price differential the amount by which the Class I price specified in § 1126.51 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1126.51, the difference shall be added to the producer price differential; and

(b) The producer price differential applicable for other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted producer price differential shall not be less than zero.

§ 1126.76 Payments by a handler operating a partially regulated distributing plant.

Subpart—Order Regulating Handling

General Provisions

§ 1131.1 General provisions.

The terms, definitions, and provisions in Part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1131.2 Arizona-Las Vegas marketing area.

The marketing area means all territory within the bounds of the following states and political subdivisions, including all piers, docks and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State or Federal) reservations, installations, institutions, or other similar establishments if any part thereof is within any of the listed states or political subdivisions:

Arizona

All of the State of Arizona.

Nevada Counties

Clark.

§ 1131.3 Route disposition.

See § 1000.3 of this chapter.

§ 1131.4 Plant.

See § 1000.4 of this chapter.

§ 1131.5 Distributing Plant.

See § 1000.5 of this chapter.

§ 1131.6 Supply Plant.

See § 1000.6 of this chapter.

§ 1131.7 Pool plant.

Pool Plant means a plant or unit of plants specified in paragraphs (a) through (e) of this section. The pooling standards described in paragraphs (a), (c), and (d) of this section are subject to modification pursuant to paragraph (f) of this section.

(a) A distributing plant from which during the month there is route disposition equal to 25 percent or more of the total quantity of bulk fluid milk products physically received at such plant; and route disposition in the marketing area of at least 15 percent of total route disposition. For purposes of this section, packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the single purpose of qualifying the transferring plant as a pool distributing plant.

(b) A distributing plant located in the marketing area which during the month processes a majority of its receipts of milk products into aseptically packaged fluid milk products. If during the month the plant had no route disposition into any federal milk order the plant operator may request nonpool status for such plant for the month.

(c) A supply plant from which 50% or more of the total quantity of milk that is physically received at such plant from dairy farmers and handlers described in § 1000.9(c) is transferred to pool distributing plants.

(d) A plant located within the marketing area and operated by a cooperative association if, during the month, or the immediately preceding 12-month period, 35 percent or more of the producer milk of members of the association (and any producer milk of nonmembers and members of another cooperative association which may be marketed by the cooperative association) is physically received in the form of bulk fluid milk products at plants specified in paragraph (a) or (b) of this section either directly from farms or by transfer from supply plants operated by the cooperative association

VOL 63 ISS 20 JA 30 1998 UMI

and from plants of the cooperative association for which pool plant status has been requested under this paragraph subject to the following conditions:

(1) The plant does not qualify as a pool plant under paragraph (a), (b) or (c) or this section or under comparable provisions of another Federal order; and

(2) The plant is approved by a duly constituted regulatory agency for the handling of milk approved for fluid consumption in the marketing area.

(e) Two or more plants operated by the same handler and located in the marketing area may qualify for pool plant status as a unit by together meeting the requirements specified in paragraph (a) of this section and subject to all of the following additional requirements:

(1) At least one of the plants in the unit must qualify as a pool plant pursuant to paragraph (a) of this section;

(2) Other plants in the unit must process Class I or Class II products, using 50 percent or more of the total Grade A fluid milk products received in bulk form at such plant or diverted therefrom by the plant operator in Class I or Class II products, and must be located in a pricing zone providing the same or lower Class I price than the price applicable at the distributing plant included in the unit pursuant to paragraph (e)(1) of this section;

(3) A written request to form a unit must be filed by the handler with the market administrator prior to the first day of the month for which such status is desired to be effective. The unit shall continue from month to month thereafter without further notification. The handler shall notify the market administrator in writing prior to the first day of any month for which termination or any change of the unit is desired.

(f) The applicable percentages in paragraphs (a), (b), (c), and (d) of this section may be increased or decreased by the market administrator if found necessary to obtain needed shipments or to prevent uneconomic shipments. Before making such a finding, the market administrator shall investigate the need for revision, either on the market administrator's own initiative or at the request of interested parties. If such investigation shows that a revision might be appropriate, a notice shall be issued stating that a revision adjustment is being considered and inviting data, views, and arguments. If the market administrator determines that an adjustment to the shipping percentages is necessary, the market administrator shall notify the industry within one day of the effective date of such adjustment.

(g) The term pool plant shall not apply to the following plants:

(1) A producer-handler as defined under any Federal order;

(2) An exempt plant as defined in § 1000.8(e).

(3) A plant located within the marketing area and qualified pursuant to paragraph (a) or (e) of this section which meets the pooling requirements of another Federal order, and from which more than 50 percent of its route disposition has been in the other Federal order marketing area for three consecutive months.

(4) A plant located outside the marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of another Federal order or a State order providing for marketwide pooling, and has had greater sales in such other Federal order's marketing area for 3 consecutive months;

(5) A plant located in another Federal order marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of such other Federal order and does not have a majority of its route distribution in this marketing area for 3 consecutive months or if the plant is required to be regulated under such other Federal order without regard to its route disposition in any other Federal order marketing area;

(6) A plant qualified pursuant to paragraph (c) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under the other Federal order than are made to plants regulated under this order, or the plant has automatic pooling status under the other Federal order; and

(7) That portion of a regulated plant designated as a nonpool plant that is physically separate and operated separately from the pool portion of such plant. The designation of a portion of a regulated plant as a nonpool plant must be requested in advance and in writing by the handler and must be approved by the market administrator.

§ 1131.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1131.9 Handler.

See § 1000.9 of this chapter.

§ 1131.10 Producer-handler.

Except as provided in paragraph (g) of this section, *producer-handler* means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds during the month;

(b) Receives no fluid milk products from sources other than own farm production, pool handlers, and plants fully regulated under another Federal order;

(c) Receives at its plant or acquires for route disposition no more than 150,000 pounds of fluid milk products from handlers fully regulated under any Federal order. This limitation shall not apply if the producer-handler's own farm production is less than 150,000 pounds during the month.

(d) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own farm production or pool handlers;

(e) Disposes of no fluid milk products using the distribution system of another handler except for direct deliveries to retail outlets or to a pool handler's plant;

(f) Does not distribute fluid milk products to a wholesale customer who also is serviced by a handler described in § 1000.9(a) or (d) that supplied the same product in the same-sized package with a similar label to the wholesale customer during the month;

(g) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled (excluding receipts from handlers fully regulated under any Federal order) and the processing, packaging, and distribution operations are the producer-handler's own enterprise and at its own risk; and

(h) Producer-handler shall not include any producer who also operates a distributing plant if the producer-handler so requests that the two be operated as separate entities with the distributing plant regulated under § 1131.7(a) and the farm operated as a producer under § 1131.12.

§ 1131.11 [Reserved]

§ 1131.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk (or components of milk) is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1131.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is received at an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1131.13(d);

(3) A dairy farmer whose milk is received by diversion at a pool plant from a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I;

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order; and

(5) A dairy farmer whose milk is received at a pool plant if during the month milk from the same farm is received at a nonpool plant (except a nonpool plant that has no utilization or milk products in any class other than Class III or Class IV) other than as a diversion under this or some other Federal order.

§ 1131.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk) and butterfat in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer or a handler described in § 1000.9(c). Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of the pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it was picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received.

(b) Received by a handler described in § 1000.9(c) in excess of the quantity delivered to pool plants.

(c) Diverted by a pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant or a cooperative association described in § 1000.9(c) to a nonpool plant, subject to the following conditions:

(1) Milk of a dairy farmer shall not be eligible for diversion unless at least one day's production of such dairy farmer is physically received at a pool plant during the month;

(2) The total quantity of milk diverted by a handler in any month shall not exceed 20 percent of the total producer milk caused by the handler to be received at pool plants or diverted;

(3) Diverted milk shall be priced at the location of the plant to which diverted;

(4) Any milk diverted in excess of the limits prescribed in (d)(2) of this section shall not be producer milk. If the diverting handler or cooperative association fails to designate the dairy farmers' deliveries that are not to be producer milk, no milk diverted by the handler or cooperative association during the month to a nonpool plant shall be producer milk. In the event some of the milk of any producer is determined not to be producer milk pursuant to this paragraph, other milk delivered by such producer as producer milk during the month will not be subject to § 1131.12(b)(5); and

(5) The applicable diversion limits in paragraph (d)(2) of this section may be increased or decreased by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested persons. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

§ 1131.14 Other source milk.

See § 1000.14 of this chapter.

§ 1131.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1131.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1131.17 [Reserved]

§ 1131.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1131.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1131.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator's office received the report on or before the 7th day after the end of the month, in the detail and on the forms prescribed by the market administrator, as follows:

(a) With respect to each of its pool plants, the quantities of skim milk and butterfat contained in or represented by:

(1) Receipts of producer milk, including producer milk diverted by the plant operator to other plants;

(2) Receipts of milk from handlers described in § 1000.9(c);

(3) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(4) Receipts of other source milk;

(5) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products; and

(6) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. Such report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler described in § 1000.9(c) shall report:

(1) The quantities of all skim milk and butterfat contained in receipts of milk from producers; and

(2) The utilization or disposition of all such receipts.

(d) Each handler described in § 1131.10 shall report:

(1) The pounds of milk received from each of the handler's own-farm production units, showing separately the production of each farm unit and the number of dairy cows in production at each farm unit;

(2) Fluid milk products and bulk fluid cream products received at its plant or acquired for route disposition from pool plants, other order plants, and handlers described in § 1000.9(c);

(3) Receipts of other source milk not reported pursuant to paragraph (d)(2) of this section;

(4) Inventories at the beginning and end of the month of fluid milk products and fluid cream products; and

(5) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph.

(e) Each handler not specified in paragraphs (a) through (d) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1131.31 Payroll reports.

(a) On or before the 20th day after the end of each month, each handler

VOL 63 ISS 20 JA 30 1998 UMI

described in § 1000.9(a) and (c) shall report to the market administrator its producer payroll for such month, in the detail prescribed by the market administrator, showing for each producer:

(1) The producer's name and address;

(2) The total pounds of milk received from the producer;

(3) The average butterfat content of such milk; and

(4) The price per hundredweight, the gross amount due, the amount and nature of any deductions, and the net amount paid.

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1131.32 Other reports.

In addition to the reports required pursuant to § 1131.30 and § 1131.31, each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1131.40 Classes of utilization.

See § 1000.40 of this chapter.

§ 1131.41 [Reserved]

§ 1131.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1131.43 General classification rules.

See § 1000.43 of this chapter.

§ 1131.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1131.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1131.50 Class prices, component prices, Class I differential and price.

Class prices and component prices are described in § 1000.50. The Class I differential shall be the differential established for Maricopa County, Arizona, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Maricopa County, Arizona.

§ 1131.51 [Reserved]

§ 1131.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1131.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1131.54 Equivalent price.

See § 1000.54 of this chapter.

Uniform Price

§ 1131.60 Handler's value of milk.

For the purpose of computing the uniform price, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) as follows:

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) by the applicable skim milk and butterfat prices and add the resulting amounts;

(b) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(c) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(d) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii), and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(e) Add the amount obtained from multiplying the Class I price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding steps of § 1000.44(b), excluding such skim milk and butterfat in receipts of bulk fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(f) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I use pursuant to § 1000.43(d);

(g) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another order under § 1000.76(a)(5) or (c).

§ 1131.61 Computation of uniform price, uniform butterfat price and uniform skim milk price.

(a) For each month the market administrator shall compute the uniform price per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than two cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1131.71 for the preceding month shall not be included in the computation of the uniform price. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the uniform price in the following manner:

(1) Combine into one total the values computed pursuant to § 1131.60 for all handlers required to file reports prescribed in § 1131.30;

(2) Add an amount equal to the sum of the location adjustments computed pursuant to § 1131.75;

(3) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(4) Add or subtract, as the case may be, to obtain an all-producer milk test of 3.5% butterfat, the value of the required pounds of butterfat times the uniform butterfat price computed pursuant to paragraph (b) of this section;

(5) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(i) The total hundredweight of producer milk;

(ii) The total hundredweight for which a value is computed pursuant to § 1131.60(f); and

(6) Subtract not less than 4 cents nor more than 5 cents per hundredweight. The result shall be the uniform price for milk received from producers during the month.

(b) *Uniform butterfat price.* The Uniform butterfat price per pound, rounded to the nearest one-hundredth cent, shall be obtained by multiplying the pounds of butterfat in producer milk allocated to each class pursuant to § 1000.44(b) by the respective class butterfat prices (Class I butterfat price for Class I and the butterfat price for all other classes) and dividing the sum of such values by the total pounds of such butterfat.

(c) *Uniform skim milk price.* The uniform skim milk price per hundredweight, rounded to the nearest cent, shall be the uniform price for the month computed pursuant to paragraph (a) of this section, less the uniform butterfat price for the month computed pursuant to paragraph (b) of this section multiplied by 3.5, with the result divided by .965.

§ 1131.62 Announcement of uniform price, uniform butterfat price and uniform skim milk price.

On or before the 11th day after the end of each month, the market administrator shall announce the following prices and information:

(a) The uniform price computed pursuant to § 1131.61 for such month;

(b) The uniform butterfat price computed pursuant to § 1131.61(b) for such month; and

(c) The uniform skim milk price computed pursuant to § 1131.61(c) for such month.

Payments for Milk

§ 1131.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1131.71 Payments to the producer-settlement fund.

Each handler shall make payment to the producer-settlement fund in a manner that provides receipt of the funds by the market administrator no later than the 13th day after the end of the month. Payments due the market administrator shall be deemed not to have been made until the money owed has been received at the market administrator's office, or deposited into the market administrator's bank account. Payment shall be the amount, if any, by which the amount specified in paragraph (a) of this section exceeds the amount specified in paragraph (b) of this section:

(a) The total value of milk to the handler for the month as determined pursuant to § 1131.60.

(b) The sum of:

(1) The value at the uniform prices for skim milk and butterfat, adjusted for plant location, of the handler's receipts of producer milk; and

(2) The value at the uniform price as adjusted pursuant to § 1131.75 applicable at the location of the plant from which received of other source milk for which a value is computed pursuant to § 1131.60(e).

§ 1131.72 Payments from the producer-settlement fund.

No later than the 14th day after the end of each month, the market administrator shall pay to each handler the amount, if any, by which the amount computed pursuant to § 1131.71(b) exceeds the amount computed pursuant to § 1131.71(a). If, at such time, the balance in the producer-settlement fund is insufficient to make all payments pursuant to this section, the market administrator shall reduce uniformly such payments and shall complete the payments as soon as the funds are available.

§ 1131.73 Payments to producers and to cooperative associations.

(a) Except as provided in paragraphs (b) and (c) of this section, each handler shall make payment to each producer from whom milk is received during the month as follows:

(1) *Partial Payment.* For each producer who has not discontinued shipments as of the 25th day of the month, payment shall be made so that it is received by the producer on or before the 27th day of each month to each producer who did not discontinue shipping milk to such handler before the 25th day of the month, for milk received from such producer during the first 15 days of the month at not less than 1.3 times the lowest class price for the preceding month, adjusted for plant location pursuant to § 1131.75 and proper deductions authorized in writing by the producer; and

(2) *Final Payment.* On or before the 15th day of the following month, not less than an amount computed by the sum of the following:

(i) The hundredweight of producer milk received times the uniform price for the month as adjusted pursuant to § 1131.75;

(ii) The hundredweight of producer skim milk received times the uniform skim milk price for the month;

(iii) The pounds of producer butterfat received times the uniform butterfat price for the month;

(iv) Less payments made pursuant to paragraph (a) of this section;

(v) Less deductions made for marketing service pursuant to § 1000.86;

(vi) Plus or minus adjustments for errors made in previous payments to such producer; and

(vii) Less proper deductions authorized in writing by such producer.

(b) Two days prior to the dates on which partial and final payments are due pursuant to paragraph (a) of this section, each pool plant operator shall pay a cooperative association for milk received as follows:

(1) *Partial payment to a cooperative association.* On or before the 25th day of the month each handler shall pay to a cooperative association that the market administrator determines is authorized by its members to collect payment for their milk, an amount not less than 1.3 times the lowest class price for the preceding month multiplied by the hundredweight of milk received during the first 15 days of the month from such cooperative association, including the milk of producers not members of such cooperative association who the market administrator determines have authorized the cooperative association to collect payment for their milk;

(2) *Final Payment to a cooperative association.* On or before the 13th day of the following month, each handler shall pay to a cooperative association which the market administrator determines is authorized by its members to collect payment for their milk not less than an amount computed pursuant to paragraph (a)(2) of this section for milk received from such cooperative association during the month, including the milk of producers not members of such cooperative association who the market administrator determines have authorized the cooperative association to collect payment for their milk;

(c) If a handler has not received full payment from the market administrator pursuant to § 1131.72 by the payment date specified in paragraph (a) or (b) of this section, the handler may reduce pro rata his payments pursuant to such paragraphs, but by not more than the amount of such underpayment. Payments to producers shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(d) If a handler claims that a required payment to a producer cannot be made

VOL 63 ISS 20 JA 30 1998 UMI

because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer-settlement fund. In the event the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or the lawful claimant, as the case may be.

(e) In making payments to producers pursuant to this section, each pool plant operator shall furnish each producer, except a producer whose milk was received from a handler described in § 1000.9(a) or (c), a supporting statement in such form that it may be retained by the recipient which shall show:

(1) The month, and identity of the producer;

(2) The daily and total pounds and the total pounds of butterfat content of producer milk;

(3) The minimum rate at which payment to the producer is required pursuant to this order;

(4) The rate used in making payments if the rate is other than the applicable minimum rate;

(5) The amount, rate per hundredweight, and nature of each deduction claimed by the handler; and

(6) The net amount of payment to the producer.

§ 1131.74 [Reserved]

§ 1131.75 Plant location adjustments for producers and on nonpool milk.

(a) The uniform price for producer milk shall be adjusted according to the location of the plant at which the milk was first physically received by subtracting from the price the amount by which the Class I price specified in § 1131.50 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1131.50, the difference shall be added to the uniform price; and

(b) The uniform price applicable to other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted uniform price shall not be less than the lowest announced class price.

§ 1131.76 Payments by handler operating a partially regulated distributing plant.

See § 1000.76 of this chapter.

§ 1131.77 Adjustment of accounts.

See § 1000.77 of this chapter.

§ 1131.78 Charges on overdue accounts.

General Provisions

§ 1134.1 General provisions.

The terms, definitions, and provisions in Part 1000 of this chapter apply to and are hereby made a part of this order.

Definitions

§ 1134.2 Western marketing area.

The marketing area means all territory within the bounds of the following states and political subdivisions, including all piers, docks and wharves connected therewith and all craft moored thereat, and all territory occupied by government (municipal, State or Federal) reservations, installations, institutions, or other similar establishments if any part thereof is within any of the listed states or political subdivisions:

Utah

All of the State of Utah.

Colorado Counties

Delta, Garfield, Mesa, and Montrose.

Idaho Counties

Ada, Adams, Bannock, Bear Lake, Bingham, Blaine, Boise, Bonneville, Camas, Canyon, Caribou, Cassia, Elmore, Franklin, Gem, Gooding, Jefferson, Jerome, Lincoln, Madison, Minidoka, Oneida, Owyhee, Payette, Power, Twin Falls, Valley, and Washington.

Nevada Counties

Elko, Lincoln, and White Pine.

Oregon Counties

Baker, Grant, Harney, Malheur, and Union.

Wyoming Counties

Lincoln and Uinta.

§ 1134.3 Route disposition.

See § 1000.3 of this chapter.

§ 1134.4 Plant.

See § 1000.4 of this chapter.

§ 1134.5 Distributing plant.

See § 1000.5 of this chapter.

§ 1134.6 Supply plant.

See § 1000.6 of this chapter.

§ 1134.7 Pool plant.

Pool Plant means a plant or unit of plants specified in paragraphs (a) through (e) of this section. The pooling standards described in paragraphs (a), (c), and (d) of this section are subject to modification pursuant to paragraph (f) of this section.

(a) A distributing plant from which during the month there is route disposition equal to 25 percent or more of the total quantity of bulk fluid milk products physically received at such plant and there is route disposition in the marketing area of at least 15 percent of total route disposition. For purposes of this section, packaged fluid milk products that are transferred to a distributing plant shall be considered as route disposition from the transferring plant, rather than the receiving plant, for the single purpose of determining the pool status of the transferring plant under this section.

(b) A distributing plant located in the marketing area which during the month processes a majority of its receipts of milk products into aseptically packaged fluid milk products. If during the month the plant had no route disposition into any federal milk order the plant operator may request nonpool status for such plant for the month.

(c) A supply plant from which during the month the quantity of bulk fluid milk products transferred or diverted to plants described in paragraph (a) or (b) of this section is 35 percent of more of the total Grade A milk received at the plant from dairy farmers (except dairy farmers described in § 1134.12(b)) and handlers described in § 1000.9(c), including milk diverted by the plant operator, subject to the following conditions:

(1) A supply plant that has qualified as a pool plant during each of the immediately preceding months of September through February shall continue to so qualify in each of the following months of March through August unless the plant operator files a written request with the market administrator that such plant not be a pool plant, such nonpool status to be effective the first month following such request. A plant withdrawn from pool supply plant status may not be reinstated for any subsequent month of the March through July period unless it qualifies as a pool plant on the basis of milk shipments;

(2) A pool plant operator may include as qualifying shipments milk diverted to pool distributing plants pursuant to § 1134.13(c);

(3) No plant may qualify as a pool plant due to a reduction in the shipping percentage pursuant to paragraph (f) of this section unless it has been a pool supply plant during each of the immediately preceding three months.

(d) A milk manufacturing plant located within the marketing area that is operated by a cooperative association if, during the month or the immediately preceding 12-month period ending with the current month, 35% or more of such cooperative's member producer milk (and any producer milk of nonmembers and members of another cooperative association which may be marketed by the cooperative association) is physically received in the form of bulk fluid milk products at plants specified in paragraph (a) or (b) of this section either directly from farms or by transfer from supply plants operated by the cooperative association and from plants of the cooperative association for which pool plant status has been requested under this paragraph subject to the following conditions:

(1) The plant does not qualify as a pool plant under paragraph (a), (b) or (c) of this section or under comparable provisions of another Federal order; and

(2) The plant is approved by a duly constituted regulatory agency for the handling of milk approved for fluid consumption in the marketing area.

(e) Two or more plants located in the marketing area and operated by the same handler may qualify for pool plant status as a unit by together meeting the requirements specified in paragraph (a) of this section and subject to the following additional requirements:

(1) At least one of the plants in the unit must individually qualify as a pool plant pursuant to paragraph (a) of this section.

(2) Other plants in the unit must process Class I or Class II products, using 50 percent or more of the total Grade A fluid milk products received in bulk form at such plant or diverted therefrom by the plant operator in Class I or Class II products, and must be located in a pricing zone providing the same or a lower Class I price than the price applicable at the distributing plant included in the unit pursuant to paragraph (e)(1) of this section; and

(3) A written request to form a unit must be filed by the handler with the market administrator prior to the first day of the month for which such status is to be effective. The unit shall continue from month to month thereafter without further notification. The handler shall notify the market administrator in writing prior to the first day of any month for which termination or any change of the unit is desired.

(f) The applicable percentages in paragraphs (a), (c), and (d) of this section may be increased or decreased by the market administrator if found necessary to obtain needed shipments or to prevent uneconomic shipments. Before making a finding that a change is necessary, the market administrator shall investigate the need for revision, either on the market administrator's own initiative or at the request of interested persons. If such investigation shows that a revision might be appropriate, a notice shall be issued stating that such a revision is being considered and inviting written data, views, and arguments. If the market administrator determines that an adjustment to the shipping percentages is necessary, the market administrator shall notify the industry within one day of the effective date of such adjustment.

(g) The term pool plant shall not apply to the following plants:

(1) A producer-handler as defined under any Federal order;

(2) An exempt plant as defined in 1000.8(e).

(3) A plant located within the marketing area and qualified pursuant to paragraph (a) or (e) of this section which meets the pooling requirements of another Federal order, and from which more than 50 percent of its route disposition has been in the other Federal order marketing area for three consecutive months;

(4) A plant located outside the marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of another Federal order and has had greater sales in such other Federal order's marketing area for 3 consecutive months;

(5) A plant located in another Federal order marketing area and qualified pursuant to paragraph (a) of this section that meets the pooling requirements of such other Federal order and does not have a majority of its route distribution in this marketing area for 3 consecutive months or if the plant is required to be regulated under such other Federal order without regard to its route disposition in any other Federal order marketing area;

(6) A plant qualified pursuant to paragraph (c) of this section which also meets the pooling requirements of another Federal order and from which greater qualifying shipments are made to plants regulated under the other Federal order than are made to plants regulated under this order, or the plant

VOL 63 ISS 20 JA 30 1998 UMI

has automatic pooling status under the other Federal order; and

(7) That portion of a regulated plant designated as a nonpool plant that is physically separate and operated separately from the pool portion of such plant. The designation of a portion of a regulated plant as a nonpool plant must be requested in advance and in writing by the handler and must be approved by the market administrator.

§ 1134.8 Nonpool plant.

See § 1000.8 of this chapter.

§ 1134.9 Handler.

See § 1000.9 of this chapter.

§ 1134.10 Producer-handler.

Except as provided in paragraph (g) of this section, *producer-handler* means a person who:

(a) Operates a dairy farm and a distributing plant from which there is monthly route disposition in excess of 150,000 pounds during the month;

(b) Receives no fluid milk products from sources other than own farm production, pool handlers, and plants fully regulated under another Federal order;

(c) Receives at its plant or acquires for route disposition no more than 150,000 pounds of fluid milk products from handlers fully regulated under any Federal order. This limitation shall not apply if the producer-handler's own farm production is less than 150,000 pounds during the month.

(d) Disposes of no other source milk as Class I milk except by increasing the nonfat milk solids content of the fluid milk products received from own farm production or pool handlers;

(e) Disposes of no fluid milk products using the distribution system of another handler except for direct deliveries to retail outlets or to a pool handler's plant;

(f) Provides proof satisfactory to the market administrator that the care and management of the dairy animals and other resources necessary to produce all Class I milk handled (excluding receipts from handlers fully regulated under any Federal order) and the processing, packaging, and distribution operations are the producer-handler's own enterprise and at its own risk; and

(g) Producer-handler shall not include any producer who also operates a distributing plant if the producer-handler so requests that the two be operated as separate entities with the distributing plant regulated under § 1134.7(a) and the farm operated as a producer under § 1134.12.

§ 1134.11 Proprietary bulk tank handler.

(a) Any person, except a cooperative association, with respect to milk that it receives for its account from the farm of a producer in a tank truck owned and operated by, or under the control of, such person and which is delivered during the month for the account of such person to the pool plant of another handler or diverted pursuant to § 1134.13, subject to the following conditions:

(1) Such person (who, if qualified pursuant to this paragraph, shall be known as a *proprietary bulk tank handler*) must operate a plant located in the marketing area at which milk is processed only into Class II, Class III, or Class IV products; and

(2) Prior to operating as a handler pursuant to this paragraph, such person must submit to the marker administrator a statement signed by the applicant and the operator of the pool plant to which the milk will be delivered specifying that the applicant will be the responsible handler for the milk.

§ 1134.12 Producer.

(a) Except as provided in paragraph (b) of this section, *producer* means any person who produces milk approved by a duly constituted regulatory agency for fluid consumption as Grade A milk and whose milk (or components of milk) is:

(1) Received at a pool plant directly from the producer or diverted by the plant operator in accordance with § 1134.13; or

(2) Received by a handler described in § 1000.9(c).

(b) Producer shall not include:

(1) A producer-handler as defined in any Federal order;

(2) A dairy farmer whose milk is delivered to an exempt plant, excluding producer milk diverted to the exempt plant pursuant to § 1134.13(d);

(3) A dairy farmer whose milk is diverted to a pool plant by a handler regulated under another Federal order if the other Federal order designates the dairy farmer as a producer under that order and that milk is allocated by request to a utilization other than Class I; and

(4) A dairy farmer whose milk is reported as diverted to a plant fully regulated under another Federal order with respect to that portion of the milk so diverted that is assigned to Class I under the provisions of such other order.

(5) A dairy farmer whose milk was received at a pool plant if during the month milk from the same farm was received at a nonpool plant (except a nonpool plant that has no utilization of milk products in any Class other than Class III or Class IV) other than as a diversion under this or some other Federal order.

§ 1134.13 Producer milk.

Producer milk means the skim milk (or the skim equivalent of components of skim milk), including nonfat components, and butterfat in milk of a producer that is:

(a) Received by the operator of a pool plant directly from a producer, by a handler described in § 1000.9(c), or by a handler described in § 1134.11. Any milk picked up from the producer's farm tank in a tank truck under the control of the operator of the pool plant or a handler described in § 1000.9(c) but which is not received at a plant until the following month shall be considered as having been received by the handler during the month in which it was picked up at the producer's farm. All milk received pursuant to this paragraph shall be priced at the location of the plant where it is first physically received;

(b) Received by a handler described in § 1000.9(c) or in § 1134.11 in excess of the quantity delivered to pool plants.

(c) Diverted by a pool plant operator to another pool plant. Milk so diverted shall be priced at the location of the plant to which diverted; or

(d) Diverted by the operator of a pool plant, a cooperative association described in § 1000.9(c), or a proprietary bulk tank handler described in § 1134.11, to a nonpool plant, subject to the following conditions:

(1) Milk of a dairy farmer shall not be eligible for diversion unless at least one day's milk production of such dairy farmer has been physically received as producer milk at a pool plant and the dairy farmer has continuously retained producer status since that time. If a dairy farmer loses producer status under this order (except as a result of a temporary loss of Grade A approval), the dairy farmer's milk shall not be eligible for diversion until milk of the dairy farmer has been physically received as producer milk at a pool plant;

(2) Of the quantity of producer milk received during the month (including diversions) the handler diverts to nonpool plants not more than 80 percent;

(3) Diverted milk shall be priced at the location of the plant to which diverted;

(4) Any milk diverted in excess of the limits prescribed in (d)(2) of this section shall not be producer milk. If the diverting handler, cooperative association, or proprietary bulk tank handler fails to designate the dairy farmers' deliveries that are not to be

producer milk, no milk diverted by the handler, cooperative association, or proprietary bulk tank handler during the month to a nonpool plant shall be producer milk. In the event some of the milk of any producer is determined not to be producer milk pursuant to this paragraph, other milk delivered by such producer as producer milk during the month will not be subject to § 1134.12(b)(5); and

(5) The applicable diversion limits in paragraph (d)(2) of this section may be increased or decreased by the market administrator if the market administrator finds that such revision is necessary to assure orderly marketing and efficient handling of milk in the marketing area. Before making such a finding, the market administrator shall investigate the need for the revision either on the market administrator's own initiative or at the request of interested persons. If the investigation shows that a revision might be appropriate, the market administrator shall issue a notice stating that the revision is being considered and inviting written data, views, and arguments. Any decision to revise an applicable percentage must be issued in writing at least one day before the effective date.

§ 1134.14 Other source milk.

See § 1000.14 of this chapter.

§ 1134.15 Fluid milk product.

See § 1000.15 of this chapter.

§ 1134.16 Fluid cream product.

See § 1000.16 of this chapter.

§ 1134.17 [Reserved]

§ 1134.18 Cooperative association.

See § 1000.18 of this chapter.

§ 1134.19 Commercial food processing establishment.

See § 1000.19 of this chapter.

Handler Reports

§ 1134.30 Reports of receipts and utilization.

Each handler shall report monthly so that the market administrator receives the report on or before the 7th day after the end of each month, in the detail and on the forms prescribed by the market administrator, as follows:

(a) Each handler that operates a pool plant pursuant to § 1134.7, and each handler described in § 1000.9(c) or in § 1134.11, shall report for each of its operations the following information:

(1) Product pounds, pounds of butterfat, pounds of protein, nd pounds of solids-not-fat other than protein (other solids), contained in or represented by:

(i) Receipts of producer milk, including producer milk diverted by the handler; and

(ii) Receipts of milk from handlers described in § 1000.9(c);

(2) Product pounds and pounds of butterfat contained in:

(i) Receipts of fluid milk products and bulk fluid cream products from other pool plants;

(ii) Receipts of other source milk; and

(iii) Inventories at the beginning and end of the month of fluid milk products and bulk fluid cream products;

(3) The utilization or disposition of all milk and milk products required to be reported pursuant to this paragraph; and

(4) Such other information with respect to the receipts and utilization of skim milk, butterfat, milk protein, and other nonfat solids, as the market administrator may prescribe.

(b) Each handler operating a partially regulated distributing plant shall report with respect to such plant in the same manner as prescribed for reports required by paragraph (a) of this section. Receipts of milk that would have been producer milk if the plant had been fully regulated shall be reported in lieu of producer milk. The report shall show also the quantity of any reconstituted skim milk in route disposition in the marketing area.

(c) Each handler not specified in paragraphs (a) and (b) of this section shall report with respect to its receipts and utilization of milk and milk products in such manner as the market administrator may prescribe.

§ 1134.31 Payroll reports.

(a) On or before the 21st day after the end of each month, each handler that operates a pool plant pursuant to § 1134.7 and each handler described in § 1000.9(c) and in § 1134.11 shall report to the market administrator its producer payroll for the month, in the detail prescribed by the market administrator, showing for each producer the information described in § 1134.73(f).

(b) Each handler operating a partially regulated distributing plant who elects to make payment pursuant to § 1000.76(b) shall report for each dairy farmer who would have been a producer if the plant had been fully regulated in the same manner as prescribed for reports required by paragraph (a) of this section.

§ 1134.32 Other reports.

In addition to the reports required pursuant to §§ 1134.30 and 1134.31, each handler shall report any information the market administrator deems necessary to verify or establish each handler's obligation under the order.

Classification of Milk

§ 1134.40 Classes of utilization.

See § 1134.40 of this chapter.

§ 1134.41 [Reserved]

§ 1134.42 Classification of transfers and diversions.

See § 1000.42 of this chapter.

§ 1134.43 General classification rules.

See § 1000.43 of this chapter.

§ 1134.44 Classification of producer milk.

See § 1000.44 of this chapter.

§ 1134.45 Market administrator's reports and announcements concerning classification.

See § 1000.45 of this chapter.

Class Prices

§ 1134.50 Class prices and component prices.

See § 1000.50 of this chapter.

§ 1134.51 Class I differential and price.

The Class I differential shall be the differential established at Salt Lake County, Utah, which is reported in § 1000.52. The Class I price shall be the price computed pursuant to § 1000.50(a) for Salt Lake County, Utah.

§ 1134.52 Adjusted Class I differentials.

See § 1000.52 of this chapter.

§ 1134.53 Announcement of class prices and component prices.

See § 1000.53 of this chapter.

§ 1134.54 Equivalent price.

See § 1000.54 of this chapter.

Producer Price Differential

§ 1134.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of its pool plants, and of each handler described in § 1000.9(c) and § 1134.11 as follows:

(a) Class I value.

(1) Multiply the hundredweight of skim milk in Class I as determined pursuant to § 1000.44(a) by the Class I skim milk price applicable at the handler's location; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class I as determined pursuant to § 1000.44(b) by the Class I butterfat price applicable at the handler's location.

VOL 63 ISS 20 JA 30 1998 UMI

(b) Add the Class II value, computed as follows:

(1) Multiply the hundredweight of skim milk in Class II as determined pursuant to § 1000.44(a) by 70 cents;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class II as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class II as determined pursuant to § 1000.44(b) by the butterfat price;

(c) Add the Class III value computed as follows:

(1) Multiply the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average protein content of producer skim milk received by the handler, and multiply the resulting pounds of protein by the protein price;

(2) Add an amount obtained by multiplying the pounds of skim milk in Class III as determined pursuant to § 1000.44(a) by the average other solids content of producer skim milk received by the handler, and multiply the resulting pounds of other solids by the other solids price; and

(3) Add an amount obtained by multiplying the pounds of butterfat in Class III as determined pursuant to § 1000.44(b) by the butterfat price;

(d) Add the Class IV value computed as follows:

(1) Multiply the pounds of skim milk in Class IV as determined pursuant to § 1000.44(a) by the average nonfat solids content of producer skim milk received by the handler, and multiply the resulting pounds of nonfat solids by the nonfat solids price; and

(2) Add an amount obtained by multiplying the pounds of butterfat in Class IV as determined pursuant to § 1000.44(b) by the butterfat price;

(e) [Reserved]

(f) Add the amounts obtained from multiplying the pounds of skim milk and butterfat overage assigned to each class pursuant to § 1000.43(b)(2) by the respective skim milk and butterfat prices applicable at the location of the pool plant;

(g) Add the amount obtained from multiplying the difference between the Class III price for the preceding month and the Class I price applicable at the location of the pool plant or the Class II price, as the case may be, for the current month by the hundredweight of skim milk and butterfat subtracted from Class I and Class II pursuant to § 1000.44(a)(7) and the corresponding step of § 1000.44(b);

(h) Add the amount obtained from multiplying the difference between the Class I price applicable at the location of the pool plant and the Class III price by the hundredweight of skim milk and butterfat assigned to Class I pursuant to § 1000.43(d) and the hundredweight of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(3)(i) through (iii) and the corresponding step of § 1000.44(b), excluding receipts of bulk fluid cream products from a plant regulated under other Federal orders and bulk concentrated fluid milk products from pool plants, plants regulated under other Federal orders, and unregulated supply plants;

(i) Add the amount obtained from multiplying the difference between the Class I price and the Class III price applicable at the location of the nearest unregulated supply plants from which an equivalent volume was received by the pounds of skim milk and butterfat in receipts of concentrated fluid milk products assigned to Class I pursuant to § 1000.43(d) and § 1000.44(a)(3)(i) and the pounds of skim milk and butterfat subtracted from Class I pursuant to § 1000.44(a)(8) and the corresponding step of § 1000.44(b), excluding such skim milk and butterfat in receipts of bulk fluid milk products from an unregulated supply plant to the extent that an equivalent amount of skim milk or butterfat disposed of to such plant by handlers fully regulated under any Federal milk order is classified and priced as Class I milk and is not used as an offset for any other payment obligation under any order;

(j) Subtract, for reconstituted milk made from receipts of nonfluid milk products, an amount computed by multiplying $1.00 (but not more than the difference between the Class I price applicable at the location of the pool plant and the Class IV price) by the hundredweight of skim milk and butterfat contained in receipts of nonfluid milk products that are allocated to Class I pursuant to § 1000.43(d); and

(k) Exclude, for pricing purposes under this section, receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another order under § 1000.76(a)(5) or (c).

§ 1134.61 Computation of producer price differential.

For each month the market administrator shall compute a producer price differential per hundredweight. If the unreserved balance in the producer-settlement fund to be included in the computation is less than 2 cents per hundredweight of producer milk on all reports, the report of any handler who has not made payments required pursuant to § 1134.71 for the preceding month shall not be included in the computation of the producer price differential. The report of such handler shall not be included in the computation for succeeding months until the handler has made full payment of outstanding monthly obligations. Subject to the aforementioned conditions, the market administrator shall compute the producer price differential in the following manner:

(a) Combine into one total the values computed pursuant to § 1134.60 for all handlers required to file reports prescribed in § 1134.30;

(b) Subtract the total values obtained by multiplying each handler's total pounds of protein, other solids, and butterfat contained in the milk for which an obligation was computed pursuant to § 1134.60 by the protein price, the other solids price, and the butterfat price, respectively;

(c) Add an amount equal to the sum of the location adjustments computed pursuant to § 1134.75;

(d) Add an amount equal to not less than one-half of the unobligated balance in the producer-settlement fund;

(e) Divide the resulting amount by the sum of the following for all handlers included in these computations:

(1) The total hundredweight of producer milk; and

(2) The total hundredweight for which a value is computed pursuant to § 1134.60(i); and

(f) Subtract not less than 4 cents nor more than 5 cents from the price computed pursuant to paragraph (e) of this section. The result shall be known as the *producer price differential* for the month.

§ 1134.62 Announcement of producer prices.

On or before the 12th day after the end of each month, the market administrator shall announce publicly the following prices and information:

(a) The producer price differential;

(b) The protein price;

(c) The other solids price;

(d) The butterfat price;

(e) [Reserved]

(f) The average butterfat, protein and other solids content of producer milk; and

(g) The statistical uniform price for milk containing 3.5 percent butterfat, computed by combining the Class III price and the producer price differential.

Payments for Milk

§ 1134.70 Producer-settlement fund.

See § 1000.70 of this chapter.

§ 1134.71 Payments to the producer-settlement fund.

Each handler shall make payment to the producer-settlement fund in a manner that provides receipt of the funds by the market administrator no later than the 14th day after the end of the month. Payment shall be the amount, if any, by which the amount specified in paragraph (a) of this section exceeds the amount specified in paragraph (b) of this section:

(a) The total value of milk to the handler for the month as determined pursuant to § 1134.60.

(b) The sum of:

(1) An amount obtained by multiplying the total hundredweight of producer milk as determined pursuant to § 1000.44(c) by the producer price differential as adjusted pursuant to § 1134.75;

(2) An amount obtained by multiplying the total pounds of protein, other solids, and butterfat contained in producer milk by the protein, other solids, and butterfat prices respectively;

(3) [Reserved]

(4) An amount obtained by multiplying the pounds of skim milk and butterfat for which a value was computed pursuant to § 1134.60(i) by the producer price differential as adjusted pursuant to § 1134.75 for the location of the plant from which received.

§ 1134.72 Payments from the producer-settlement fund.

No later than the 15th day after the end of each month, the market administrator shall pay to each handler the amount, if any, by which the amount computed pursuant to § 1134.71(b) exceeds the amount computed pursuant to § 1134.71(a). If, at such time, the balance in the producer-settlement fund is insufficient to make all payments pursuant to this section, the market administrator shall reduce uniformly such payments and shall complete the payments as soon as the funds are available.

§ 1134.73 Payments to producers and to cooperative associations.

(a) Except as provided in paragraph (b) and (c) of this section, each handler shall make payment to each producer from whom milk is received during the month as follows:

(1) *Partial Payment.* On or before the 25th day of each month to each producer an amount not less than 1.2 times the lowest class price for the preceding month multiplied by the hundredweight of milk received from such producer during the first 15 days of the month, less proper deductions authorized by such producer to be made from payments due pursuant to this paragraph; and

(2) *Final Payment.* On or before the 17th day of the following month, not less than an amount computed by the sum of the following:

(i) The hundredweight of producer milk received times the producer price differential for the month as adjusted pursuant to § 1134.75;

(ii) The pounds of butterfat in producer milk received times the butterfat price for the month;

(iii) The pounds of protein in producer milk received times the protein price for the month;

(iv) The pounds of other solids in producer milk received times the other solids price for the month;

(v) [Reserved]

(vi) Less any payments made pursuant to paragraph (a)(1) of this section;

(vii) Less proper deductions authorized in writing by such producer and plus or minus adjustments for errors in previous payments to such producer; and

(viii) Less deductions made for marketing service pursuant to § 1000.86;

(b) *Partial payment to a cooperative association.* On or before the 24th day of each month each handler shall pay to a cooperative association, which the market administrator determines is authorized by its members to collect payment for their milk, an amount not less than 1.2 times the lowest class price for the preceding month multiplied by the hundredweight of milk received during the first 15 days of the month from such cooperative association, including the milk of producers not members of such cooperative association who the market administrator determines have authorized the cooperative association to collect payment for their milk;

(c) *Final Payment to a cooperative association.* On or before the 16th day of the following month, each handler shall pay to a cooperative association which the market administrator determines is authorized by its members to collect payment for their milk not less than an amount computed pursuant to paragraph (a)(2) of this section for milk received from such cooperative association during the month, including the milk of producers not members of such cooperative association who the market administrator determines have authorized the cooperative association to collect payment for their milk;

(d) If a handler has not received full payment from the market administrator pursuant to § 1134.72 by the payment date specified in paragraph (a), (b), or (c) of this section, the handler may reduce pro rata its payments to producers or to the cooperative association by not more than the amount of such underpayment. The payments shall be completed on the next scheduled payment date after receipt of the balance due from the market administrator.

(e) If a handler claims that a required payment to a producer cannot be made because the producer is deceased or cannot be located, or because the cooperative association or its lawful successor or assignee is no longer in existence, the payment shall be made to the producer settlement fund, and in the event the handler subsequently locates and pays the producer or a lawful claimant, or in the event that the handler no longer exists and a lawful claim is later established, the market administrator shall make the required payment from the producer-settlement fund to the handler or to the lawful claimant, as the case may be.

(f) In making payments to producers pursuant to this section, each handler shall furnish each producer, except a producer whose milk was received from a cooperative association handler described in § 1000.9(a) or (c), a supporting statement in a form that may be retained by the recipient which shall show:

(1) The name, address, Grade A identifier assigned by a duly constituted regulatory agency, and payroll number of the producer;

(2) The daily and total pounds, and the month and dates such milk was received from that producer;

(3) The total pounds of butterfat, protein, and other solids contained in the producer's milk;

(4) [Reserved];

(5) The minimum rate or rates at which payment to the producer is required pursuant to this order;

(6) The rate used in making payment if the rate is other than the applicable minimum rate;

(7) The amount, or rate per hundredweight, or rate per pounds of component, and the nature of each deduction claimed by the handler; and

(8) The net amount of payment to the producer or cooperative association.

§ 1134.74 [Reserved]

§ 1134.75 Plant location adjustments for producer milk and nonpool milk.

(a) The producer price differential for producer milk shall be adjusted according to the location of the plant at

VOL 63 ISS 20 JA 30 1998 UMI

which the milk was first physically received by subtracting from the price differential the amount by which the Class I price specified in § 1134.51 exceeds the Class I price at the plant's location. If the Class I price at the plant location exceeds the Class I price specified in § 1134.51, the difference shall be added to the producer price differential; and

(b) The producer price differential applicable to other source milk shall be adjusted following the procedure specified in paragraph (a) of this section, except that the adjusted producer price differential shall not be less than zero.

§ 1134.76 Payments by a handler operating a partially regulated distributing plant.

See § 1000.76 of this chapter.

§ 1134.77 Adjustment of accounts.

See § 1000.77 of this chapter.

§ 1134.78 Charges on overdue accounts.

See § 1000.78 of this chapter.

Administrative Assessment and Marketing Service Deduction

§ 1134.85 Assessment for order administration.

See § 1000.85 of this chapter.

§ 1134.86 Deduction for marketing services.

See § 1000.86 of this chapter.

Dated: January 21, 1998.

Michael V. Dunn,

Assistant Secretary for Marketing and Regulatory Programs.

Note: The following appendices will not appear in the Code of Federal Regulations.

Appendix A: Summary of Preliminary Suggested Order Consolidation Report

Ten marketing areas are suggested in the preliminary consolidation report. As a means of determining where interrelationships among the current marketing areas are strongest, data relating to the receipts and distribution of fluid milk products by distributing plants were gathered for all known distributing plants located in the 47 contiguous States, not including the State of California, for the month of October 1995. At this time, California is not included as a suggested order area. The 1996 Farm Bill allows for the inclusion of a California Federal milk order if California producers petition for and approve an order. If a California order were included in the suggested Federal order structure at a later time, it would encompass the entire State and would include no area outside the State of California. Although interest in a Federal order has been expressed by some California producer groups, no definite action has been taken.

An analysis of the distribution and procurement patterns of the fluid processing plants, along with other factors, was used to determine which order areas were most closely related. Proposals submitted by the public were also taken into account. The primary criteria used in determining which markets exhibit a sufficient degree of association in terms of sales, procurement, and structural relationships to warrant consolidation were:

1. Overlapping route disposition.
2. Overlapping areas of milk supply.
3. Number of handlers within a market.
4. Natural boundaries.
5. Cooperative association service areas.
6. Features common to existing orders, such as similar multiple component pricing payment plans.
7. Milk utilization in common dairy products.

The requirement to consolidate existing marketing areas does not specify expansion of regulation to previously nonfederally regulated areas where such expansion would have the effect of regulating handlers not currently regulated. However, a number of the current marketing areas enclose unregulated areas. These "pockets" are included in the suggested merged marketing areas only if their inclusion does not change the current regulatory status of a plant. In the process of consolidating marketing areas, some handlers who currently are partially regulated may become fully regulated because their sales in a combined marketing area will likely meet the pooling standards of a suggested consolidated order. Further expansion of the marketing areas, which would result in regulating additional handlers, is an issue that should be addressed by the industry. Proposals to take such action should be accompanied by supporting data, views, and arguments concerning the need and basis for any such expansion.

The 10 suggested consolidated marketing areas and the major reasons for consolidation are:

1. Northeast

Current marketing areas of the New England, New York-New Jersey, and Middle Atlantic Federal milk orders. Reasons for consolidation include the existence of overlapping sales and procurement areas between New England and New York-New Jersey and between New York-New Jersey and Middle Atlantic. The orders are also surrounded by nonfederally regulated territory. A further measure of association is evident by industry efforts to study and pursue consolidation of the three Federal orders, as well as some of the nonfederally regulated territory, prior to the 1996 Farm Bill.

2. Appalachian

Current marketing areas of the Carolina and Tennessee Valley Federal milk orders, and a portion of the Louisville-Lexington-Evansville Federal milk order. Overlapping sales and procurement areas between these marketing areas are major factors for supporting such a consolidation.

3. Florida

Current marketing areas of the Upper Florida, Tampa Bay, and Southeastern Florida Federal milk orders. Natural boundary limitations and overlapping sales and procurement areas among the three orders are major reasons for consolidation, as well as a measure of association evidenced by cooperative association proposals to consolidate these three marketing areas. Further, the cooperative associations in this area have worked together for a number of years to accommodate needed movements of milk between the three Florida Federal orders.

4. Southeast

Current marketing area of the Southeast Federal milk order, plus 1 county from the Louisville-Lexington-Evansville Federal milk order marketing area, 15 currently unregulated Kentucky counties, and 2 currently unregulated northeast Texas counties. Major reasons for this consolidation include sales and procurement area overlaps between the Southeast order and the Kentucky and Texas counties suggested for inclusion. There is minimal sales area overlap with handlers regulated under other Federal orders.

5. Mideast

Current marketing areas of the Ohio Valley, Eastern Ohio-Western Pennsylvania, Southern Michigan, and Indiana Federal milk orders, plus most of the current marketing area of the Louisville-Lexington-Evansville Federal milk order, Zone 2 of the Michigan Upper Peninsula Federal milk order, and 12 counties of the Southern Illinois-Eastern Missouri Federal milk order. Major criteria suggesting this consolidation include the overlap of fluid sales in the Ohio Valley marketing area by handlers from the other areas suggested to be consolidated. With the consolidation, most route disposition by handlers located within the suggested Mideast order would be within the marketing area. Also, nearly all milk produced within the area would be pooled under the consolidated order. The portion of the Michigan Upper Peninsula marketing area suggested to be included in the Mideast consolidated area has sales and milk procurement areas in common with the Southern Michigan area and has minimal association with the western end of the current Michigan Upper Peninsula marketing area.

6. Upper Midwest

Current marketing areas of the Chicago Regional and Upper Midwest Federal milk orders, plus Zones I and I(a) of the Michigan Upper Peninsula Federal milk order and seven unregulated or partly unregulated Wisconsin counties. Major consolidation criteria include an overlapping procurement area between the Chicago Regional and Upper Midwest orders, overlapping procurement and route disposition area between the western end of the Michigan Upper Peninsula order and the Chicago Regional order, natural boundary limitations, and the prevalence of cheese as a major manufactured product for the substantial reserve milk supplies that exceed fluid milk needs.

7. Central

Current marketing areas of the Southern Illinois-Eastern Missouri (less 12 counties included in the suggested Mideast marketing area), Central Illinois, Greater Kansas City, Nebraska-Western Iowa (less 11 currently-regulated counties suggested to be unregulated), Eastern South Dakota, Iowa, Southwest Plains, and Eastern Colorado Federal milk orders, plus 63 currently-unregulated counties in seven of the states. Major criteria suggesting this consolidation include the overlapping procurement and route disposition between the current orders. The suggested consolidation would result in a concentration of both the sales and supplies of milk within the consolidated marketing area. The suggested consolidation would combine several relatively small orders and provide for the release of market data without revealing proprietary information. In addition, most of the producers in these areas share membership in several common cooperatives.

8. Southwest

Current marketing areas of the Texas, New Mexico-West Texas, and Central Arizona Federal milk orders. Major criteria suggesting consolidation include sales and procurement area overlaps and common cooperative association membership between the Texas and New Mexico-West Texas marketing areas, and similar marketing concerns with respect to trade with Mexico for all three orders. In addition, there is some route disposition by Central Arizona handlers into the New Mexico-West Texas marketing area, and the Central Arizona market contains a small number of handlers.

9. Western

Current marketing areas of the Western Colorado, Southwestern Idaho-Eastern Oregon, and Great Basin Federal milk orders. Major criteria suggesting consolidation include overlapping sales between Southwestern Idaho-Eastern Oregon and Great Basin, as well as a significant overlap in procurement for the two orders in five Idaho counties. The two orders also share a similar multiple component pricing plan. The Western Colorado order is included because it is a small market where data cannot be released without revealing confidential information unless combined with the adjacent Great Basin order.

10. Pacific Northwest

Current marketing area of the Pacific Northwest Federal milk order plus 1 currently-unregulated county in Oregon. The degree of association with other marketing areas is insufficient to warrant consolidation.

Following is a table summarizing relevant data for the consolidated markets:

CONSOLIDATED MARKET SUMMARY

[Based on October 1995 data]

Consolidated order	Total producer milk (1,000 lbs.)	Number of fully regulated distributing plants	Combined class I utilization (percent)
Northeast	1,934,833	85	46.7
Appalachian	320,198	25	82.5
Florida	200,397	18	88.3
Southeast	443,921	38	84.3
Mideast	[1] 1,140,952	68	57.8
Upper Midwest	[2] 1,046,539	[4] 27	34.2
Central	[3] 932,929	42	50.6
Southwest	861,307	31	48.3
Western	304,793	14	[5] 31.7
Pacific Northwest	501,257	23	36.3
Total	7,687,126	371	n/a

[1] Producer milk for F.O. 44 is included. Producer milk for a F.O. 32 handler who would be pooled under the suggested Mideast market is included in the Central consolidated market.
[2] Producer milk for F.O. 30 and F.O. 68 only.
[3] Producer milk for a F.O. 32 handler that would be in the Mideast consolidated market is included.
[4] A significant amount of producer milk was not pooled in October 1995. Estimated total producer milk would result in a 15.3% combined Class I utilization.
[5] A significant amount of producer milk was not pooled in October 1995. Estimated total producer milk would result in a 21.8% combined Class I utilization.

Appendix B: Summary of Pricing Options

Several options for modifying Class I pricing under the Federal milk market order program, representing a spectrum of views, are discussed in this summary report. The accompanying technical report summarizes all of the comments and proposals received by the Department related to Class I pricing under Federal orders.

Most Class I pricing concepts that were suggested would continue to employ a market-driven basic formula price (BFP) with an added differential. Differentials are a composite of one or more of the following elements: (1) A fixed component, (2) a location adjustment, (3) an adjustor relating to utilization, or (4) the cost of balancing the market. Based on the pricing concepts received, the following options were developed:

Option 1A: Location-Specific Differential

$1.60 per hundredweight fixed differential for three surplus regions (Upper Midwest, West, and Southwest) within a nine-zone national price surface, plus for the other six zones an added component that reflects regional differences in the value of fluid and manufacturing milk.

Option 1B: Modified Location-Specific Differential Option

$1.00 per hundredweight fixed differential plus an added component that reflects the cost of moving bulk milk to deficit markets.

Option 2: Relative Use Differential

$1.60 per hundredweight fixed differential plus a formula-based differential driven by the ratio of Class I milk to all other uses of milk.

Option 3A: Flat Differential Option

$1.60 per hundredweight flat differential, uniformly applied across all orders to generate an identical minimum Class I price.

Option 3B: Flat Differential Modified by Class I Use—

$2.00 per hundredweight differential in markets where Class I utilization is less than 70 percent on an annual basis and a differential equal to $2.00 + $0.075(Class I use %—70%) in markets where the Class I utilization is equal to or exceeds 70 percent.

Option 4: Demand-Based Differential—

$1.00 per hundredweight fixed differential plus a transportation credit based on location of reserve milk supplies.

Estimated Class I differentials are presented for each option to provide a preliminary basis for determining impacts that may occur. The report provides estimated differentials for the suggested 10

VOL
63
ISS
20
JA
30
1998
UMI

consolidated orders and for the current 32 Federal milk marketing orders.

The report concludes by soliciting comments on the options presented and poses a series of questions for the public to address when submitting comments back to the Department on the issue of Class I pricing.

Appendix C: Summary of Classification Report

The Agricultural Marketing Agreement Act of 1937 provides that all milk should be classified "in accordance with the form in which or the purpose for which it is used." This has resulted in a system of uniform classification provisions that places milk used for fluid purposes in the highest use class, Class I, and other manufactured products in lower classes, Classes II, III, and III–A.

Currently products packaged for fluid consumption such as whole milk, skim milk, buttermilk, and flavored milk drinks are classified as Class I products. Class II products include ice cream, yogurt, cottage cheese, and cream. Class III and Class III–A products include cheese, butter, and nonfat dry milk.

Among the changes in classification recommended in the technical report are the following:

- Eggnog would be reclassified from Class II to Class I.
- Any fluid beverage having less than 6.5 percent nonfat milk solids would be reclassified from Class II to Class I.
- Cream cheese would be reclassified from Class III to Class II.

The technical report recommends changing the classification of milk used in nonfat dry milk from Class III–A to Class III. The report recommends that if Class III–A pricing is not eliminated, the following four alternatives be considered:

- Place a floor beneath the Class III–A price;
- Restrict III–A pricing to certain months or to certain markets;
- Provide an up-charge for nonfat dry milk used in higher-valued products; or
- Provide for a combination of these options.

Maintaining the classification of milk used to make nonfat dry milk in Class III–A is also an option, although not discussed in the technical report.

The technical report addresses Class III–A pricing because of industry concerns about the substitution of nonfat dry milk for fluid milk in Class II and III uses when the Class III–A price is substantially below the Class III price.

Appendix D: Summary of Identical Provisions Report

Federal milk marketing orders contain numerous provisions that establish the regulations for the operation of the orders. Over the years, the orders have been individualized to account for specific situations associated with a given marketing area. However, there are several provisions within the orders that are similar or that could be similar and still provide for efficient and orderly marketing of milk.

The technical report does the following:

- Suggests a model for establishing the consolidated orders and provides suggestions on the order language that can be adopted uniformly throughout all orders.
- Reviewed, simplified, modified, and eliminated differences in order provisions that:
  - Define various terms used in the orders
  - Establish regulatory standards for plants and handlers
  - Provide for uniform reporting dates of milk receipts and utilization
  - Provide for uniform dates for payment of milk
  - Provide for computation of a uniform price
- Reduces performance standards to make it easier for producers to associate with a market.

At this time, it is impossible to determine if there would be any financial impact on producers, handlers, or consumers as a result of any of these suggested provision revisions. It is projected that there will be little impact on the overall program because the changes primarily provide for uniformity. There may be minimal impact on selected individual producers, handlers, or consumers, but this cannot be determined until more specific information is developed regarding the orders (i.e., marketing area and pricing). The suggested identical provisions will be applied to each of the suggested consolidated orders and determinations will be based on the marketing conditions of the given region.

One suggested change in the report that may stimulate some debate is the definition of a producer-handler. The technical report suggests applying the most liberal standard to the producer-handler definition to prevent any producer-handler from becoming regulated as a result of milk order reform. Producer-handlers have been exempt from full regulation because they assume the full risks associated with being a producer and a distributor of milk produced with only occasional and small volumes of milk being purchased from other dairy farmers.

Appendix E: Summary of Basic Formula Price Report

The basic formula price (BFP) is used to determine Federal order prices for milk used in manufactured products and, with the addition of differentials, to determine minimum Class I and II prices for milk pooled under the Federal orders. The current BFP is based on a survey of prices paid for manufacturing grade (Grade B) milk by plants in Minnesota and Wisconsin, updated by month-to-month changes in commodity prices (especially cheese). The continuing decline in the volume of Grade B milk produced in the upper Midwest and nationally is an indication that, in the near future, the M–W price series may not be statistically reliable as an indicator of the value of milk used in manufactured products.

The BFP Committee has received input provided during a public BFP Forum held in Madison, Wisconsin, and from over 200 written public comments, and conducted a survey of transaction prices for manufactured dairy products. The Committee also has sponsored analysis by a group of university researchers, and conducted extensive study and analysis of its own. The BFP Committee evaluated alternatives to the BFP against the criteria of stability, predictability, simplicity, uniformity, transparency, sound economics and reduced regulation. Options identified by the Committee were grouped into the following categories:

Options Considered: Economic formulas, Product price and component formulas, Futures markets, California pricing, Cost of production, Informal rulemaking, Competitive pay price, Pooling differentials only.

At this time, the Committee has identified four options for further discussion and debate:

- A four-class, multiple component pricing plan to price butterfat, protein and lactose used in cheese (Class III), and butterfat and nonfat solids used in butter/powder (Class IV).
- A three-class, multiple component pricing plan to price protein used in cheese, butterfat used in butter, and other nonfat solids used in powder (Class III—one manufacturing class).
- A product price formula computed from the butter, powder and cheese shares of U.S. production, using seasonal product yields and a California cost-based make allowance; and
- A competitive pay price series using a national weighted average price paid for Grade A milk used in manufactured products, updated by a product price formula. The price series would contain an adjuster to attempt to remove the effect of current regulation and to reduce it to a level more comparable to the current BFP.

As a basis for Class I prices, the BFP could be made more stable by using an economic formula or using a moving average of a manufacturing price. Class II prices could be based on components or continue to include a differential from the manufacturing price level.

The BFP Committee is continuing to study and analyze alternatives in response to public comments.

Appendix F: Summary of Revised Preliminary Suggested Order Consolidation Report

The ten marketing areas suggested in the initial preliminary consolidation report have increased to eleven and been modified to some extent in this revised preliminary report. Several of the initially suggested marketing areas were the subjects of numerous comments containing information that indicated that the boundaries of those areas should be re-evaluated. In addition, shifts in regulation and distributing plant distribution areas were known to have occurred. As a result, more detailed and updated (January 1997) data was obtained relating to the receipts of producer milk and distribution of fluid milk products by distributing plants in a number of the initially-suggested order marketing areas. As a result, changes were made in the suggested marketing areas of the Northeast, Appalachian, Southeast, Mideast, Upper Midwest, Central, Southwest, and Western

regions, and a new Arizona-Las Vegas area was added.

An analysis of the distribution and procurement patterns of the fluid processing plants, along with other factors, was used to determine which order areas were most closely related. Proposals submitted by the public were also taken into account. The primary criteria used in determining which markets exhibit a sufficient degree of association in terms of sales, procurement, and structural relationships to warrant consolidation continued to be:

1. Overlapping route disposition.
2. Overlapping areas of milk supply.
3. Number of handlers within a market.
4. Natural boundaries.
5. Cooperative association service areas.
6. Features common to existing orders, such as similar multiple component pricing plans.
7. Milk utilization in common dairy products.

In the initial preliminary report, it was observed that the Farm Bill requirement to consolidate existing marketing areas does not specify expansion of regulation to previously non-Federally regulated areas where such expansion would have the effect of regulating handlers not currently regulated. This revised preliminary report suggests that some currently non-Federally regulated area be added on the basis of comments supported by data, views and arguments filed by interested persons. Specifically, unregulated areas contiguous to the initial suggested consolidated Northeast and Mideast marketing areas are suggested for inclusion in those suggested order areas. Some handlers currently not subject to full Federal order regulation would become pool plants if the suggested areas are added. Handlers who would be affected will be notified of the possible change in their status, and encouraged to comment.

As in the initial preliminary report, "pockets" of unregulated areas enclosed in the current marketing areas are included in the suggested consolidated marketing areas if their inclusion does not change the current regulatory status of a plant. However, in the process of consolidating marketing areas, some handlers who currently are partially regulated may become fully regulated because their sales in a combined marketing area will meet the pooling standards of a suggested consolidated order area. As a result, this report suggests that some unregulated areas contiguous to currently-regulated areas be added to Federal order areas where additional handlers would be affected.

The 11 modified suggested marketing areas (with those modified from the initial preliminary report, and the modifications, marked by *) and the major reasons for consolidation are:

***1. Northeast**

Current marketing areas of the New England, New York-New Jersey, and Middle Atlantic Federal milk orders, **with the addition of:* contiguous unregulated areas of New Hampshire, Vermont and New York; the western non-Federally regulated portion of Massachusetts, the Western New York State order area, and Pennsylvania Milk Marketing Board Areas 2 and 3 in northeastern Pennsylvania.

Reasons for consolidation include the existence of overlapping sales and procurement areas between New England and New York-New Jersey and between New York-New Jersey and Middle Atlantic. In several cases, handlers who would become regulated because their total sales in the combined areas would meet pooling standards are located in areas where they compete with handlers who would not be similarly regulated. Handler equity suggests that these handlers, too, should become regulated. Another important measure of association is evidenced by industry efforts to study and pursue consolidation of the three Federal orders, as well as some of the nonfederally regulated territory, prior to the 1996 Farm Bill.

Sixteen additional distributing plants would be pooled as a result of the expansion of the consolidated area. Nine of these plants currently are partially regulated.

***2. Appalachian**

Current marketing areas of the Carolina and Tennessee Valley Federal milk orders, **with the addition of:* all of the Louisville-Lexington-Evansville Federal order area (except one county—in the suggested Southeast area) and 26 currently-unregulated counties in Indiana and Kentucky.

More detailed and updated data showing overlapping sales and procurement areas between these marketing areas are major factors for supporting such a consolidation.

3. Florida

Current marketing areas of the Upper Florida, Tampa Bay, and Southeastern Florida Federal milk orders.

Natural boundary limitations and overlapping sales and procurement areas among the three orders are major reasons for consolidation, as well as a measure of association evidenced by cooperative association proposals to consolidate these three marketing areas. Further, the cooperative associations in this area have worked together for a number of years to accommodate needed movements of milk between the three Florida Federal orders.

***4. Southeast**

Current marketing area of the Southeast Federal milk order, plus 1 county from the Louisville-Lexington-Evansville Federal milk order marketing area, plus 15 currently-unregulated Kentucky counties, **minus* 2 currently-unregulated counties in northeast Texas (in the suggested Southwest area).

Major reasons for this consolidation include sales and procurement area overlaps between the Southeast order and this county. There is minimal sales area overlap with handlers regulated under other Federal orders. Collection of additional data showed greater disposition in the two Texas counties from Texas handlers than from Southeast handlers. There are no handlers in these two counties that would be affected.

***5. Mideast**

Current marketing areas of the Ohio Valley, Eastern Ohio-Western Pennsylvania, Southern Michigan, and Indiana Federal milk orders, plus Zone 2 of the Michigan Upper Peninsula Federal milk order, and currently-unregulated counties in Michigan, Indiana, and Ohio **with the addition of:* Pennsylvania Milk Marketing Board Area 6 (in western/central Pennsylvania) and 2 currently-unregulated counties in New York, and **minus* the Louisville-Lexington-Evansville order area, 12 counties in Illinois, and unregulated counties in Indiana and Kentucky that are being suggested for inclusion in the Appalachian area.

Major criteria suggesting this consolidation include the overlap of fluid sales in the Ohio Valley marketing area by handlers from the other areas suggested to be consolidated. With the consolidation, most route disposition by handlers located within the suggested Mideast order would be within the marketing area. Also, nearly all milk produced within the area would be pooled under the consolidated order. The portion of the Michigan Upper Peninsula marketing area suggested to be included in the Mideast consolidated area has sales and milk procurement areas in common with the Southern Michigan area and has minimal association with the western end of the current Michigan Upper Peninsula marketing area.

Collection of additional data and recent changes in marketing patterns indicate that the relationship between the Louisville-Lexington-Evansville (L-L-E) area and the order areas initially included in the suggested Appalachian area is closer than relationship between L-L-E and the Mideast area.

Seven distributing plants that would not have been pool plants as a result of the initially-suggested consolidation would become pool plants due to the suggested expansion of the consolidated area into Pennsylvania and New York. The number of pool plants also is affected by a shift of pool plants from one consolidated area to another because of the shift of territory from the initially-suggested Mideast area to the revised suggested Appalachian area.

***6. Upper Midwest**

Current marketing areas of the Chicago Regional, Upper Midwest, Zones I and I(a) of the Michigan Upper Peninsula Federal milk orders, and unregulated portions of Wisconsin, **with the addition of:* the Iowa, Eastern South Dakota, and most of the Nebraska-Western Iowa Federal order areas, plus currently-unregulated counties in Iowa and Nebraska.

Major consolidation criteria include an overlapping procurement area between the Chicago Regional and Upper Midwest orders and overlapping procurement and route disposition area between the western end of the Michigan Upper Peninsula order and the Chicago Regional order. More-detailed and updated information revealed more significant overlapping procurement and route disposition areas between the Iowa, Eastern South Dakota and Nebraska-Western orders and Chicago Regional and Upper Midwest orders than had been observed in the initial study. In addition, a common pricing plan for producers, natural boundary

VOL 63 ISS 20 JA 30 1998 UMI

limitations, and the prevalence of cheese as a major manufactured product for the substantial reserve milk supplies that exceed fluid milk needs exist in these orders. Some of the western Nebraska area is more closely associated with the Eastern Colorado area, however, and is suggested to remain with the Central consolidated area.

Eleven additional handlers that would have been pooled under the consolidated Central order in the initial Preliminary Report would be pooled under a consolidated Upper Midwest order under this revised report.

***7. Central**

Current marketing areas of the Southern Illinois-Eastern Missouri, Central Illinois, Greater Kansas City, Southwest Plains, and Eastern Colorado Federal milk orders, 10 counties currently in the Nebraska-Western Iowa Federal order area, plus 55 currently-unregulated counties in Kansas, Missouri, Illinois, Nebraska and Colorado, **plus* the 12 counties in the current Southern Illinois-Eastern Missouri area that initially were suggested as part of the consolidated Mideast area, **minus* the Eastern South Dakota, Iowa and most of the Nebraska-Western Iowa Federal order marketing areas.

Major criteria suggesting this consolidation include the overlapping procurement and route disposition between the current orders. The suggested consolidation would result in a concentration of both the sales and supplies of milk within the consolidated marketing area. The suggested consolidation would combine several relatively small orders and provide for the release of market data without revealing proprietary information. In addition, most of the producers in these areas share membership in several common cooperatives.

***8. Southwest**

Current marketing areas of Texas and New Mexico-West Texas Federal milk orders, **with the addition of:* two northeast Texas counties previously suggested to be added to the Southeast marketing area, and 47 currently-unregulated counties in southwest Texas, and **minus* the Central Arizona marketing area.

Major criteria suggesting consolidation include sales and procurement area overlaps and common cooperative association membership between the Texas and New Mexico-West Texas marketing areas, and similar marketing concerns with respect to trade with Mexico for both orders. Addition of the currently-unregulated Texas counties will result in the regulation of no additional handlers, and will reduce handlers' recordkeeping and reporting burden and the market administrator's administrative costs. In the initial consolidation report, the Central Arizona area was found to have a minimal association with the New Mexico-West Texas and Texas order areas. Further analysis showed that it has a much more significant degree of association with the Clark County, Nevada, portion of the current Great Basin order area.

The revised suggested consolidated Southwest area would include 4 fewer fully regulated pool plants as a result of the removal of the Central Arizona area.

***9. Arizona-Las Vegas**

*An eleventh marketing area composed of the current marketing area of the Central Arizona order and the Clark County, Nevada, portion of the current Great Basin marketing area, plus eight currently-unregulated Arizona counties.

The major criterion suggesting consolidation is sales overlap between the sole Las Vegas, Nevada, handler and handlers regulated under the Central Arizona order in both Clark County, Nevada, and unregulated portions of northern Arizona. In addition, both areas exchange significant volumes of bulk and packaged milk with Southern California.

The suggested Arizona-Las Vegas marketing area would include five fully regulated handlers, with no additional handlers regulated because of the addition of the currently-unregulated northern Arizona area.

***10. Western**

Current marketing areas of the Western Colorado, Southwestern Idaho-Eastern Oregon, and Great Basin Federal milk orders, **minus* Clark County, Nevada. Major criteria suggesting consolidation include overlapping sales between Southwestern Idaho-Eastern Oregon and Great Basin, as well as a significant overlap in procurement for the two orders in five Idaho counties. The two orders also share a similar multiple component pricing plan. The Western Colorado order is included because it is a small market where data cannot be released without revealing confidential information unless combined with the adjacent Great Basin order.

Collection of more-detailed data indicates that the strength of earlier relationships between the former Great Basin and Lake Mead orders that justified their 1988 merger have dwindled significantly, with the Las Vegas area now more closely related to southern California and competing most heavily with Central Arizona handlers.

11. Pacific Northwest

Current marketing area of the Pacific Northwest Federal milk order plus 1 currently-unregulated county in Oregon. The degree of association with other marketing areas is insufficient to warrant consolidation.

Following is a table summarizing relevant data for the consolidated markets.

CONSOLIDATED MARKET SUMMARY
[Based on October 1995 Data]

Consolidated order	Number of fully regulated distributing plants		Total producer milk (1000 lbs.)		Combined class I use (percent)		Weighted average utilization value	
	Initial report	Revised report	Initial report	Revised report [1]	Initial report	Revised report	Initial report	Revised report
Northeast	85	92	1,934,833	2,102,620	46.7	49.0	$13.44	$13.49

[1] Initial report producer deliveries, adjusted to include only those handlers who would be fully regulated (i.e. Status = 1) in the revised suggested marketing area, unless otherwise noted. When applicable, producer deliveries for currently non-Federally regulated plants which would be fully regulated in a revised suggested consolidated order are included in the appropriate suggested consolidated order.
[2] Includes producer milk for one currently fully regulated plant which would be exempt (i.e. Status = 3B) in the Appalachian market in the revised preliminary report.
[3] Excludes producer milk for one currently fully regulated F.O. 7 plant which would be regulated in the Florida market in the initial preliminary report.
[4] Includes producer milk for one currently fully regulated F.O. 7 plant which would be regulated in the Florida market in the initial preliminary report.
[5] Producer milk for F.O. 44 is included. Producer milk for a F.O. 32 handler who would be pooled under the initially-suggested Mideast market is included in the initially-suggested Central market.
[6] Producer milk for F.O. 30 and F.O. 68 only.
[7] A significant amount of producer milk was not pooled in October 1995. Estimated total producer milk would result in a 15.3% combined Class I utilization.
[8] A significant amount of producer milk was not pooled in October 1995. Estimated total producer milk would result in a 19.7% combined Class I utilization.
[9] Includes producer milk for a F.O. 32 handler that would be in the initially-suggested Mideast market.

[10] Excludes producer milk for one currently fully regulated F.O. 139 plant and one currently unregulated plant which would be regulated in the Arizona-Las Vegas market in the revised preliminary report.
[11] A significant amount of producer milk was not pooled in October 1995. Estimated total producer milk would result in a 21.8% combined Class I utilization.
[12] A significant amount of producer milk was not pooled in October 1995. Estimated total producer milk would result in a 21.6% combined Class I utilization.

DEPARTMENT OF STATE

22 CFR Parts 22, 51, and 53

Public Notice 2711

Schedule of Fees for Consular Services, Department of State and Overseas Embassies and Consulates

AGENCY: Bureau of Consular Affairs, State Department.

ACTION: Final rule.

SUMMARY: This final rule sets forth the fees for consular services to take effect on February 1, 1998, and makes appropriate implementing and other related changes in affected portions of Title 22 of the Code of Federal Regulations. Specifically, the rule makes changes in the Schedule of Fees for Consular Services ("Schedule of Fees" or "Schedule") published in 22 CFR 22.1 and makes technical changes to 22 CFR part 51 (concerning passport fees) and 22 CFR part 53. The changes to the Schedule of Fees include adjustments to existing fees and the new processing fee for diversity visa applicants (see 22 CFR 42.33(i)), which took effect on October 1, 1997. The primary objective of the adjustments to the Schedule of Fees is to ensure that the costs of consular services are recovered through user fees to the maximum extent appropriate and permitted by law. As a result of new data on the cost of services, the passport fee is being lowered while most other fees are being increased. In addition, the Schedule of Fees is being restructured and streamlined. Fees for antiquated services no longer performed are being removed and fees for other services are being consolidated or more appropriately located, making the Schedule easier to read and understand. Consular services that will be performed for no fee are being added to the Schedule to facilitate tracking these services and to inform the public of all significant consular services provided by the Department.

The revised Schedule of Consular Fees was published as a proposed rule in the **Federal Register** on December 1, 1997 (62 FR 63478–85). During the 30-day public comment period, a small number of comments were received from the general public. Those comments are addressed under Supplementary Information below. For the reasons explained, the Department is setting consular fees as originally proposed, but will be making some changes in its crew list visa procedures to address concerns raised by some members of the shipping industry. Minor technical changes are being made in the wording of the Schedule for purposes of clarification.

DATES: The effective date for these changes is February 1, 1998.

FOR FURTHER INFORMATION CONTACT: Sally Light, Office of the Executive Director, Bureau of Consular Affairs, telephone (202) 647–1148; telefax (202) 647–3677.

SUPPLEMENTARY INFORMATION: The public comments received by the Department focused on three of the proposed changes in the Schedule of Consular Fees: the imposition of the nonimmigrant visa processing fee on each individual covered by a crew list visa; the increase in visa fees; and the increase in the notarial fee. One commentator also objected as a general matter to the increases in fees, noting particularly, in addition to the notarial fee, the citizenship adjudication fee and immigrant visa fees. The Department's response to the comments received is described below.

Crew List Visas

The Department received comments from four foreign shipping associations and four foreign shipping companies expressing concern about the proposal to charge the nonimmigrant visa processing fee for each person listed on a crew list for purposes of obtaining a crew list visa. These commentators generally expressed concern about the perceived increase in costs that would result from the proposed fee and noted the special status of alien crewmen and the special function of the crew list visa. The Department recognizes that the crew list visa serves a special function and is conceptually different from an individual nonimmigrant visa application. Central and common to consular processing of both the crew list and the individual visa application, however, is the automated namecheck that must be done for each person in question. This is the single largest cost factor in determining an individual alien's eligibility. Moreover, changes in nonimmigrant visa processing have led to a situation where it is often cheaper to process 50 individual visa applications than a crew list with 50 names. For example, a travel agency might submit 50 individual applications with machine readable passports under a post's mail-in program. To review those applications, the post would scan the passports and obtain the namecheck results quickly and efficiently. In the case of the crew list, in contrast, the names of all 50 crew generally would have to be manually entered before the namecheck could be performed. The process in either case would be essentially the same, but the processing of the crew list would be more costly.

These similarities create a strong presumption in favor of charging the same fee for each person on a crew list as is charged for processing a nonimmigrant visa application. While some nonimmigrant visa applications may entail documentation and interviews not generally required in the context of crew list visa processing, the same is true of crew list visas, which may take very little time or a great deal of time to process. Also, while a crew list visa is valid only for six months and a single entry, some nonimmigrant visas are similarly single-entry short-duration visas (sometimes as short as one month). While the Department could establish separate fees for each kind of visa, it instead decided to average the costs of all nonimmigrant visa applications into a single, uniform fee and to include crew list visas in this average. Establishing a single uniform fee vastly simplifies and improves the efficiency of the Department's fee collection procedures, a goal that is particularly important given the large number of countries in which the Department has consular operations and the challenge of reconciling millions of visa issuances with collections. In many countries, banks are now collecting the nonimmigrant visa processing fee from applicants who must go to the bank and obtain a payment voucher before applying at the consulate; having a single fee makes this banking function simpler and the Department's bank contracts easier to administer. Conversely, to attempt to establish different fees for different services within the general class of nonimmigrant visa services would create administrative and operational issues that would in themselves impose additional costs on the Department.

These considerations have prompted the Department to adhere to its original decision to charge for crew list visas on the same basis that it charges for nonimmigrant visas generally. The Department has decided, however, to make some changes in its crew list practices that will help mitigate the cost of this service for the shipping industry and ensure that ship owners receive maximum possible value each time the fee is paid. At present, to obtain a crew list visa, a ship owner pays the crew list fee, which varies by size of crew (and which at present is well below cost). The owner also pays the MRV fee once, since one machine readable visa is placed on the list. The crew list with its visa is given by the shipper to INS at the ship's port of entry. If the ship plans to enter at a second U.S. port, it must obtain a second visaed crew list, paying the crew list and MRV fees a second time. The more ports are entered, the more costly this procedure. Under the Department's new procedures, when the crew list visa is originally requested, the shipper will be able to submit multiple copies of the crew list, one for each U.S. port of entry anticipated within six months of visa issuance. When the namechecks are completed, each copy of the crew list will be visaed. The $45 per name fee will be paid only once for each name checked, there will be no separate fee for the visa itself (since that cost is covered by the $45), and there will be no additional charge for the visas placed on multiple copies. This procedure will ensure that the Department recovers its costs for the work actually done and maintains its simplified fee collection process while also maximizing the value received by the ship owner. The Department anticipates working closely with the shipping industry and the Immigration and Naturalization Service (INS) on these and related arrangements to ensure that the crew list visa process works smoothly and efficiently.

Notarials

The Department received comments from two overseas American citizens associations and six Americans residing abroad protesting the increase in the notarial fee from $10 to $55. Some commentators took the view that the proposed fee must be exorbitant because notarials in their experience do not take long to perform—one commentator thought a "few" minutes, another five, another ten. One organization representing Americans abroad assumed that the proposed fee of $55 was based on "what the market will bear". The Department inferred from some of these comments that it had not adequately explained the basis for the proposed fee and that it may inadvertently have caused readers to infer, wrongly, that the fee was being set above cost in order to discourage persons from seeking notarial services from our consulates instead of from local notaries. In fact, the $55 proposed fee is based on the actual cost of services, averaged worldwide. On a worldwide basis, while some notarials are very time-consuming because they involve complex documents, the average notarial takes four minutes of foreign service national employee (FSN) time and ten minutes of consular officer time. The hourly cost of an FSN, again on a worldwide average, when "full loaded"—i.e., when direct and indirect costs are included, is $164. The comparable figure for a consular officer is $393. Using these hourly rates and applying them to the four and ten minutes required, on average, results in a cost of $27 of FSN and $26 of consular officer time per notarial service, or a total of $53, which is the primary consideration behind the $55 fee.

Thus, the fee reflects the simple reality that it is very expensive for the United States to maintain consular facilities abroad to provide notarial and other consular services. Once the cost of service has been determined, the question is whether the actual user of the service should bear the cost or whether the cost should be subsidized by non-users. As explained when the fee was proposed, the key consideration for the Department is the conclusion that having the actual users of notarial services bear the cost of service is more appropriate than having the user of the service pay less than cost and allocating the costs not paid by the user to passport applicants, as has been done in the past to hold the fee for notarial services well below costs. Allocating the cost to passport applicants creates two anomalies: first, most passport applicants never use notarial services; second, the actual user of notarial services may be a non-U.S. citizen or a business entity or representative and not a U.S. passport holder. In addition, as the Department noted in the proposed rule, the practice of pricing notarial services well below cost has had an adverse impact on consular workload. This is certainly an appropriate factor for the Department to consider in deciding whether to set the cost of notarial services at cost or below costs. (The Department emphasizes, however, that it is not setting the fee at "market price" or otherwise above cost.)

The Department further notes that it is allocating to the passport fee a variety of emergency and citizenship services that it believes are appropriately borne by all passport holders and that it is setting a single passport fee, which will result in domestic passport applicants subsidizing the cost of providing passport processing services abroad. (It costs $205 to issue a passport overseas.) The Department believes it is in the public interest for all passport applicants to subsidize the costs of some services performed for American citizens overseas. One low worldwide passport fee furthers the public interest of documenting Americans overseas. Thus, for example, while the cost of issuing a Report of Birth overseas is $160, most of that cost is included in the passport fee. The cost of registration of American citizens at our embassies and consulates overseas to ensure their protection in the event of a crisis also is included in the passport fee. Finally, the passport fee includes the costs of performing all death, arrest, welfare and whereabouts, and other unpredictable emergency services for Americans overseas.

Notarial services, in contrast, are not emergency services performed for Americans in distress or citizenship documentation services. There is no public interest in requiring passport applicants to subsidize private business or legal transactions for Americans and non-Americans overseas. Thus, this is a consular service for which the Department believes it is appropriate to expect the actual user to pay the full cost. Having reviewed and considered the comments received, the Department will establish the fee as previously proposed.

Other Comments

One organization representing Americans abroad also expressed concern that the citizenship adjudication fee could discourage some individuals from verifying their citizenship. The Department recognizes an affirmative policy interest in having American citizens documented as such, and has relied upon this policy consideration to allocate some citizenship documentation costs to the worldwide passport fee (e.g., consular reports of birth abroad and passports issued overseas). In setting the fee for citizenship adjudication, however, the Department was faced with additional considerations. As explained previously, this service is generally required in complex, time-consuming cases in which the citizen was not documented prior to age 18. The delay in documenting contributes to making these cases more difficult and is most often the responsibility of the applicant and/or the applicant's parents. Setting the fee at cost ensures that the actual user pays and may, in the long term, encourage persons with citizenship claims to seek documentation at an earlier time, when documentation will be easier. In addition, INS provides the same service. If the Department's fee is lower than the INS fee, as has been the case, there will be some incentive for this work to shift from INS to State. For the Department to set its fee for this service below cost would invariably contribute to any such incentive—an undesirable result given the existing strains on overseas consular resources. The Department continues to believe that these countervailing considerations counsel in favor of setting the fee at cost, and having the actual user of the service pay for it in full, rather than setting the fee below cost with the

VOL 63 ISS 20 JA 30 1998 UMI

balance of the cost reallocated elsewhere.

Regulatory Findings

This rule is not considered to be a major rule for purposes of E.O. 12291 nor is it expected to have a significant impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act, 5 U.S.C. 605(b). This rule does not impose information collection requirements under the provisions of the Paperwork Reduction Act, 44 U.S.C. Chapter 35. This rule has been reviewed as required by E.O. 12988 and determined to be in compliance therewith. This rule is exempt from E.O. 12866 but has been reviewed internally by the Department to ensure consistency with the objectives thereof and by OMB in light of its public policy implications. OMB has determined that the rule would in any event not constitute a significant regulatory action under E.O. 12866.

Effective Date—Good Cause Exception

The new Schedule of Consular Fees will take effect February 1, 1998, as originally indicated when the proposed rule was published. Pursuant to 5 U.S.C. 553(d), there is good cause not to delay the effective date past February 1. Delaying the effective date could cause distortions in the Department's workload and strain already strained resources, if the Department's customers sought to time their use of services in light of anticipated increases or decreases in the applicable fees. One of the most significant changes is the reduction in the passport fees, and it is in the public interest to pass that savings on to the public immediately. In this connection, the Department notes that February 1 is when it begins to see an increase in passport applications associated with planned spring and summer travel. The Department estimates that putting the new passport fee into effect February 1, rather than March 1, will save passport applicants over $4 million, and that roughly $1 million will be saved in the first week of February alone. On the other hand, to the extent fees are being increased to reflect actual costs, it is clearly in the government's interest to begin collections under the new schedule as soon as possible. Beginning collections as soon as possible will minimize the extent to which the taxpayer is subsidizing services that should be paid for by the user. A substantial portion will be retained by the Department for its border security program. The Department has previously noted the high priority placed on upgrading and otherwise improving its border security program, particularly since the World Trade Center bombing, and the program could be adversely affected by the loss of revenues that would result from delaying the effective date. Finally, notice of the Department's proposal was first given on December 1, 1997, and no changes are being made in the fees as originally proposed.

List of Subjects

22 CFR Part 22

Consular services, Fees, Schedule of fees for consular services, Passports and visas.

22 CFR Part 51

Passports, fees.

22 CFR Part 53

Passport requirement and exceptions.

Accordingly, parts 22, 51, and 53 are amended as follows:

PART 22—[AMENDED]

1. The authority citation for part 22 is revised to read as follows:

Authority: 8 U.S.C. 1153 note, 1351, 1351 note; 10 U.S.C. 2602(c); 22 U.S.C. 214, 2504(a), 4201, 4206, 4215, 4219; 31 U.S.C. 9701; E.O. 10718, 22 FR 4632, 3 CFR, 1954–1958 Comp., p. 382; E.O. 11295, 31 FR 10603, 3 CFR, 1966–1970 Comp., p. 570.

2. Section 22.1 is revised to read as follows:

§ 22.1 Schedule of fees.

Item No.	Fee
Passport and Citizenship Services	
1. Passport Services:	
(a) Execution. Required for first-time applicants and renewals under age 16	$15.00.
(b) First-time issuance:	
(1) Applicants age 16 or over	$45.00 plus expedited processing fee if applicable.
(2) Applicants under age 16	$25.00 plus expedited processing fee if applicable.
(c) Subsequent issuance (renewal):	
(1) Applicants age 16 or over	$40.00 plus expedited processing fee if applicable.
(2) Applicants under age 16	$25.00 plus expedited processing fee if applicable.
(d) Expedited service (exclusive of express mail charges) not applicable overseas:	
(1) Requested guaranteed 3-day service	$35.00.
(2) In-person service at a U.S. Passport Agency, unless the Department has determined that the applicant is required to apply at a U.S. Passport Agency.	$35.00.
2. Exemptions: The following applicants are exempted from passport fees:	
(a) Officers or employees of the United States proceeding abroad or returning to the United States in the discharge of their official duties, or their immediate family members (22 U.S.C. 214).	No fee.
(b) American seamen who require a passport in connection with their duties aboard an American flag vessel (22 U.S.C. 214).	No fee.
(c) Widows, children, parents, or siblings of deceased members of the Armed Forces proceeding abroad to visit the graves of such members (22 U.S.C. 214).	No fee.
(d) Employees of the American National Red Cross proceeding abroad as members of the Armed Forces of the United States (10 U.S.C. 2602(c)).	No fee.
(e) Peace Corps and Volunteer Leaders deemed to be employees of the United States for purposes of exemption from passport fees (22 U.S.C. 2504(a)).	No fee.
3. File search and verification of U.S. citizenship when applicant has not presented evidence of citizenship and previous records must be searched. (This fee will not be charged when the applicant's passport was stolen or lost overseas or when one of the exemptions in item 38 is applicable.).	$15.00.

Item No.	Fee
4. Determination or adjudication of U.S. citizenship for applicants born overseas who have not presented a U.S. passport, Report of Birth Abroad of a Citizen of the United States, or Certificate of Naturalization or Citizenship from the Immigration and Naturalization Service.	$100.00.
5. Passport amendments, to add current or new information, change a name, extend a previous passport time limitation, correct an administrative error, validate a passport for travel to restricted countries, or add extra pages.	No fee.
6. Passport waiver (22 CFR 53.2(h), Passport requirement and exceptions)	No fee.
7. Registration of a U.S. Citizen at a U.S. Embassy or Consulate when documentary proof of U.S. citizenship has been presented.	No fee.
8. Report of Birth Abroad of a Citizen of the United States (includes new no. 4)	$40.00.
9. Issuance of Replacement Report of Birth Abroad of a Citizen of the United States by the Department of State in Washington. For fees relating to obtaining documents from passport files and related records, see Documentary Services, item 35 and succeeding.	$40.00.
(Item nos. 10 through 14 vacant.)	
Overseas Citizens Services	
General Overseas Assistance:	
15. Arrest visits	No fee.
16. Assistance regarding the welfare and whereabouts of a U.S. Citizen, including child custody inquiries.	No fee.
17. Loan processing:	
(a) Repatriation loans	No fee.
(b) Emergency dietary assistance loans	No fee.
(Item Nos. 18–20 vacant.)	
Death and Estate Services:	
21. Identification of remains and consultation with family members of a U.S. Citizen	No fee.
22. Assistance to the next-of-kin in making arrangements for shipping or other disposition of remains of a U.S. Citizen.	No fee.
23. Affidavit attesting to preparation and packing of remains of a U.S. Citizen	No fee.
24. Issuance of consular mortuary certificate on behalf of a U.S. Citizen	No fee.
25. Assistance in transshipment of remains of a foreign national to or through the United States, including documentation covered by items 23 and 24.	$700.00.
26. Preparation of Report of Death of an American Citizen Abroad, including sending copies to legal representative and closest known relative or relatives.	No fee.
27. Acting as a provisional conservator of estates of U.S. Citizens (other than U.S. Government employees), by taking possession of, making an inventory, and placing the official seal.	No fee.
28. Acting as a provisional conservator of estates of U.S. Citizens (other than U.S. Government employees), by overseeing the appraisal, sale, and final disposition of the estate, disbursing funds, forwarding securities, etc.:	
(a) Estates under $10,000	No fee.
(b) Estates $10,000 or more, for rendering services additional to taking possession, inventorying, and placing the official seal.	Consular time (item 70) and costs.
(Item no. 29 vacant.)	
Services Relating to Vessels and Seamen	
30. Shipping and seamen services, including recording of bill of sale of vessel purchased abroad, taking of application for certificate of American ownership, and investigation.	Per service, $80.00.
31. Documentary services related to shipping, including issuance of certificate of American ownership	Per service, $650.00 plus costs incurred.
32. Services provided for an American vessel (a vessel with a certificate of American ownership) or American seamen. (22 U.S.C. 4206).	No fee.
(Items nos. 33–34 vacant.)	
Documentary Services	
35. Notarials	$55.00.
36. Certifications:	
(a) Certifying under official seal that a copy or extract made from an official or a private document is a true copy.	$20.00; each additional copy $10.00.
(b) Certifying under official seal a statement or extract from official files or a statement that no record of an official file can be located.	$20.00; each additional copy $10.00.
(c) Certifying the fact of issuance of a Report of Birth Abroad of a Citizen of the United States and certifying copies of documents relating to births, marriages, and deaths of citizens abroad issued by a U.S. Embassy or Consulate (obtainable from the Department of State, Washington, D.C.).	$20.00; each additional copy $10.00.
37. Authentications:	
(a) Certifying to official character of a foreign notary or other official (i.e., authenticating a document).	$32.00.
(b) Authenticating a federal, state, or territorial seal, or certifying to the official status of an officer of the United States Department of State or of a foreign diplomatic or consular officer accredited to or recognized by the United States Government, or any document submitted to the Department for that purpose.	$32.00.

VOL 63 ISS 20 JA 30 1998 UMI

Item No.	Fee
38. Exemptions: Notarial, certification, and authentication fees (items 35, 36, and 37) or passport file search fees (item 3) will not be charged when the service is performed:	
(a) At the direct request of any federal government agency (unless substantial costs would be incurred).	No fee.
(b) At the direct request of any state or local government, the District of Columbia, or any of the territories or possessions of the United States (unless substantial costs would be incurred).	No fee.
(c) With respect to documents to be presented by claimants, beneficiaries, or their witnesses in connection with obtaining federal, state, or municipal monetary benefits.	No fee.
(d) For American citizens outside the United States preparing ballots for any public election in the United States or any of its territories.	No fee.
(e) At the direct request of a foreign government or an international agency of which the United States is a member if the documents are for official noncommercial use.	No fee.
(f) At the direct request of a foreign government official when appropriate or as a reciprocal courtesy.	No fee.
(g) At the direct request of U.S. Government personnel, Peace Corps volunteers, or their dependents stationed or travelling officially in a foreign country.	No fee.
(h) With respect to documents whose production is ordered by a court of competent jurisdiction	No fee.
(i) With respect to affidavits of support for immigrant visa applications	No fee.
39. Executing commissions to take testimony in connection with foreign documents for use in criminal cases when the commission is accompanied by an order of federal court on behalf of an indigent party.	No fee.
40. Providing seal and certificate for return of letters rogatory executed by foreign officials	$455.00.
41. Taking depositions or executing commissions to take testimony	Per hour, $200.00 plus costs incurred.
(Items nos. 42–49 vacant.)	
Visa Services	
50. Immigrant visa application processing fee	$260.00.
51. Immigrant visa application surcharge for Diversity Visa Lottery	$75.00.
52. Immigrant visa issuance fee	$65.00.
53. Refugee case preparation and processing	No fee.
54. Nonimmigrant visa application processing fee	$45.00.
55. EXEMPTIONS from nonimmigrant visa application processing fee:	
(a) Applicants for A, G, C–2, C–3, and NATO visas	No fee.
(b) Applicants for J visas participating in official U.S. Government (USIA or USAID) sponsored educational and cultural exchanges.	No fee.
(c) Persons issued replacement machine readable visas when the original machine readable visa has not adhered to the passport or other travel document through no fault of the applicant.	No fee.
(d) Persons exempted by international agreement as determined by the Department	No fee.
(e) Persons travelling to participate in charitable activities as determined by the Department	No fee.
56. Nonimmigrant visa issuance fee, including border crossing cards	RECIPROCAL.
57. EXEMPTIONS from nonimmigrant visa issuance fee:	
(a) An official representative of a foreign government or an international or regional organization of which the U.S. is a member.	No fee.
(b) An applicant transiting to and from the United Nations headquarters	No fee.
(c) An applicant participating in a U.S. Government sponsored program	No fee.
(d) Persons travelling to participate in charitable activities as determined by the Department	No fee.
58. Visa fingerprinting	$25.00.
59. Special visa processing services for aliens:	
(a) Returning resident status	$50.00.
(b) Transportation letter (unless waived in significant public benefit parole cases)	$120.00.
(c) Waiver of immigrant visa ineligibility (collected for INS; subject to change)	$95.00.
60. Filing immigrant visa petition (collected for INS; subject to change)	$80.00.
(Items nos. 61–64 vacant.)	
Administrative Services	
65. Non-emergency telephone calls	Local long distance rate plus $10.00.
66. Setting up and maintaining a trust account for 1 year or less to transfer funds to or for the benefit of an American in need in a foreign country.	$20.00.
67. Transportation charges incurred in the performance of fee and no-fee services when appropriate and necessary.	Costs incurred.
68. Emergency passport photo service overseas	No fee.
69. Return check processing fee (only in the United States)	$25.00.
70. Consular time charges as required by this schedule or for fee services performed away from the office or after-duty-hours.	Per hour, $180.00 plus costs incurred.
71. Photocopies (provided other than pursuant to 22 CFR Part 171 or order of a court of competent jurisdiction).	Per page, $1.00.
(Item nos. 72–80 vacant.)	

§ 22.8 [Removed]

3. Section 22.8 is removed.

PART 51—[AMENDED]

4. The authority citation for part 51 is revised to read as follows:

Authority: 22 U.S.C. 211a, 212, 213, 214, 214a, 216, 217a, 2671(d); 31 U.S.C. 9701; Sec. 129, Pub. L. 102–138, 105 Stat. 661; E.O. 11295, 36 FR 10603, 3 CFR, 1966–1970 Comp., p. 570.

5. Section 51.61 is revised to read as follows:

§ 51.61 Passport fees.

Fees, including execution fees, shall be collected for the following passport services in the amounts prescribed in the Schedule of Fees for Consular Services (22 CFR 22.1):

(a) A fee for each passport issued, which fee shall vary depending on whether the passport is issued to a first-time applicant or a renewal applicant and on the age of the applicant. The passport issuance fee shall be paid by all applicants at the time of application, except as provided in § 51.62(a).

(b) A fee for execution of the passport application, except as provided in § 51.62 (b), when the applicant is required to execute the application in person before a person authorized to administer oaths for passport purposes. This fee shall be collected as part of the passport issuance fee at the time of application and is not refundable (see 22 CFR 51.65). When execution services are provided by an official of a state or local government or of the United States Postal Service, the fee may be retained by that entity to cover the costs of service, pursuant to an appropriate agreement with the Department of State.

(c) A fee for expedited services, if any, provided pursuant to 22 CFR 51.66.

6. Section 51.62 is removed and §§ 51.63 through 51.66 are redesignated as §§ 51.62 through 51.65, respectively.

7. Newly redesignated § 51.63 is amended in paragraph (a) by changing "§ 51.63" to read "§ 51.62", and in paragraph (f) by changing "§ 51.67" to read "§ 51.66".

8. Newly redesignated § 51.66 is amended by revising paragraphs (a) and (c) to read as follows:

§ 51.66 Expedited passport processing.

(a) Within the United States, an applicant for a passport service (including issuance, amendment, extension, or the addition of visa pages) may request expedited processing by a Passport Agency. All requests by applicants for in-person services at a Passport Agency shall be considered requests for expedited processing, unless the Department has determined that the applicant is required to apply at a U.S. Passport Agency.

* * * * *

(c) A fee shall be collected for expedited processing service in the amount prescribed in the Schedule of Fees for Consular Services (22 CFR 22.1). This amount will be in addition to any other applicable fee and does not include urgent mailing costs, if any.

PART 53—PASSPORT REQUIREMENT AND EXCEPTIONS

9. The title of Part 53 is revised to read as set forth above.

10. The authority citation for part 53 is revised to read as follows:

Authority: 8 U.S.C. 1185; Proc. 3004, 18 FR 489, 3 CFR, 1949–1953 Comp., p. 180.

Dated: January 22, 1998.

Bonnie M. Cohen,

RIN 0938–AG70

Medicare and Medicaid Programs; Salary Equivalency Guidelines for Physical Therapy, Respiratory Therapy, Speech Language Pathology, and Occupational Therapy Services

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Final rule.

SUMMARY: This final rule sets forth revisions to the salary equivalency guidelines for Medicare payment for the reasonable costs of physical therapy and respiratory therapy services furnished under arrangements by an outside contractor. This final rule also sets forth new salary equivalency guidelines for Medicare payment for the reasonable costs of speech language pathology and occupational therapy services furnished under arrangements by an outside contractor. The guidelines do not apply to inpatient hospital services and hospice services. The guidelines will be used by Medicare fiscal intermediaries to determine the maximum allowable cost of those services.

EFFECTIVE DATE: This rule is effective April 1, 1998. The rule is applicable for services furnished on or after April 1, 1998. This rule is a major rule as defined in Title 5, United States Code, section 804(2). Pursuant to 5 U.S.C. section 801(a)(1)(A), we have submitted a report to Congress on this rule.

ADDRESSES: To order copies of the **Federal Register** containing this document, send your request to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954. Specify the date of the issue requested and enclose a check or money order payable to the Superintendent of Documents, or enclose your Visa or Master Card number and expiration date. Credit card orders can also be placed by calling the order desk at (202) 512–1530 or by faxing to (202) 512–2250. The cost for each copy is $8.00. As an alternative, you can view and photocopy the **Federal Register** document at most libraries designated as Federal Depository Libraries and at many other public and academic libraries throughout the country that receive the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Jackie Gordon, (410) 786–4517.

SUPPLEMENTARY INFORMATION:

I. Background

Section 1861(v)(5) of the Social Security Act (the Act) requires the Secretary to determine the reasonable cost of services furnished to Medicare beneficiaries "under an arrangement" with a provider of services, by therapists or other health-related personnel. The Health Care Financing Administration (HCFA) pays the provider directly for these services, rather than paying the therapist or supplying organization. Under section 1861(w)(1) of the Act, this payment discharges the beneficiary from liability to pay for the services. Section 1861(v)(5) of the Act also specifies that the reasonable costs for these services may not exceed an amount equal to the salary that would reasonably have been paid for the services (together with any additional costs that would have been incurred by the provider or other organization) to the person performing them if they had been performed in an employment relationship with a provider or other organization (rather than under such arrangement), plus allowances for certain expenses that may be incurred by the contracting therapy organization in furnishing the services as the Secretary in regulations determines to be appropriate.

These statutory requirements are implemented in existing regulations at 42 CFR 413.106. The regulations apply to the services of physical, occupational, speech language pathologists, and other therapists and services of other health specialists (other than physicians) furnished under arrangements with a provider of services, a clinic, a rehabilitation agency, or a public health agency. The regulations provide for:

- Hourly salary equivalency amounts comprised of:

—A prevailing hourly salary rate based on the 75th percentile of the range of salaries paid to full-time employee therapists by providers in the geographic area, by type of therapy.

—Fringe benefit and expense factors to take into account fringe benefits generally received by an employee therapist, as well as expenses (such as maintaining an office, insurance, etc.) that a therapist or therapist organization might incur in furnishing services under arrangements.

- A standard travel allowance to recognize time spent in traveling to the provider's site or the patient's home.
- As provided for in existing regulations at § 413.106(e) and explained in section 1412 of the Provider Reimbursement Manual, the following are additional allowances for costs incurred for services furnished by an outside supplier. In addition to the guidelines established for the adjusted hourly salary equivalency amount and the travel allowance, the following costs incurred for services furnished by an outside supplier are recognized, provided the services are properly documented as having been received by the provider.

—Overtime, if an outside supplier utilizes the services of its employees (including the services of aides and assistants) at an individual provider in excess of the provider's standard workweek. Several commenters stated that there should be no limits on overtime compensation. The proposed rule did not specifically introduce new limits on payment for overtime. The proposed rule provided that a provider would receive payment for overtime but if the therapist worked over 40 hours it would not receive the expense factor portion of the hourly salary equivalency guideline amount.

—Administrative and supervisory duties, if an outside supplier provides more than one therapist and at least one therapist spends more than 20 percent of his or her time supervising other therapists and performing administrative duties.

—Depreciable or leased equipment, including maintenance costs of equipment remaining at the provider's site, that the outside supplier uses in furnishing direct services to the provider's patients (may also include equipment that is transported from one provider site to another but excludes equipment owned by the provider).

—Supplies furnished by the supplier for direct patient care (e.g., gases and sprays for respiratory therapy), excluding items such as envelopes, stamps, and typewriters that are reimbursed as overhead expenses and included in the fringe benefit and expense factor.

—Travel expenses, based on 10 times the General Services Administration mileage rate for each day an outside supplier travels to a provider site.

—Aides, who are paid as an add-on. Several commenters requested that we pay aides as a function of the hourly salary equivalency amount at 50 percent of these amounts.

—Assistants, who are paid as a function of the hourly salary equivalency amount at 75 percent of these amounts. (All therapy types use assistants except respiratory therapists.)

The provider must supply the intermediary with documentation that supports these additional costs to the intermediary's satisfaction. These are the only additional costs that will be recognized.

The regulations at 42 CFR 431.106 (b)(5) and (c) also provide for an exemption for limited part-time or intermittent services if the provider required the services of an outside supplier for a particular type of therapy service and the total hours of services performed for the provider, by type of service, average less than 15 hours per week for those weeks in the cost reporting period during which services were furnished by nonemployee therapists. (Travel time is not counted in the computation, even if the actual time is used.) If a provider qualifies for this exemption, the reasonable cost of such services is evaluated on a reasonable rate per unit of service basis, except that payment for these services in the aggregate, during the cost reporting period, may not exceed the amount that would be allowable had the provider purchased these services on a regular part-time basis for an average of 15 hours per week for the number of weeks in which services were furnished. Where the contract provides for a method of payment other than rate per unit of service (e.g., hourly rate or percentage of charges), payment cannot exceed the guideline adjusted hourly amounts plus other allowable costs, even though the services are performed on a limited or intermittent part-time basis.

In addition, the existing regulations at § 413.106(f)(1) have provided for an exception because of binding contract. An exception was granted to a provider that entered into a written binding contract with a therapist or contracting organization prior to the date the initial guidelines are published for a particular type of therapy. Before the exception was granted, however, the provider was required to submit the contract to its intermediary, subject to review and approval by the HCFA regional office. This exception may be granted for the contract period, but no longer than 1 year from the date that the guidelines for the particular therapy are published. During the period in which a binding contract exception was in effect, the cost of the services was evaluated under the prudent buyer concept. (Section 1414.1 of the Provider Reimbursement Manual contains instructions on this exception.) This exception did not apply to providers who entered into a contingency contract with a therapist or contracting organization or another provider. In a contingency contract, the provider and contractor agree that if Medicare does not reimburse the provider for the rate at which the contract is set, the provider and contractor agree that the contractor will make up the difference. We do not consider a contingency contract a binding contract. (We are eliminating this exception in this final rule. See Section II. On responses to public comments on proposed rule for further discussion.)

Also, the existing regulations at § 413.106(f)(2) provide for an exception for unique circumstances or special labor market conditions. An exception may be granted when a provider demonstrates that the costs for therapy services established by the guidelines are inappropriate to a particular provider because of some unique circumstances or special labor market conditions in the area. As explained in section 1414.2 of the Provider Reimbursement Manual, exceptions will be granted only in extraordinary circumstances. Before the exception may be granted, the provider must submit appropriate evidence to its intermediary to substantiate its claim. The provider's request for an exception, together with substantiating documentation, must be submitted to the intermediary each year, no later than 150 days after the close of the provider's cost reporting period. Because providers had been required to submit cost reports to intermediaries no later than 90 days after the close of their cost reporting periods, we had required that the provider's request for an exception, together with substantiating documentation, also be submitted to the intermediary no later than 90 days after the close of its cost reporting period. On June 27, 1995 (60 FR 33137), we changed the due date for submission of cost reports to 150 days after the close of the provider's cost reporting period. Accordingly, as explained under Section II.F. of this preamble, we are revising the time period for a provider's request for an exception, together with substantiating documentation, to 150 days after the close of its cost reporting period. If the circumstances giving rise to the exception remain unchanged from a prior cost reporting period, however, the provider need only submit evidence to the intermediary 150 days after the close of its cost reporting period to establish that fact.

In order to establish an exception for unique circumstances, the provider must submit evidence to establish that it has some unique method of delivering therapy or other services, which affects its costs, that is different from the other providers in the area. The exception will be effective no earlier than the onset of the unique circumstances.

In order to substantiate an exception for special labor market conditions, the provider must submit evidence enabling the intermediary to establish that the going rate in the area for a particular type of service is higher than the guideline limit and that such services are unavailable at the guideline amounts. It is the duty of the provider to prove to the satisfaction of the intermediary that it has reasonably exhausted all possible sources of this service without success.

The intermediary collects information on the rates that other providers in the area generally pay therapists or other health care specialists. Once this information is collected, the intermediary will determine whether other providers in the area, in comparison to the provider requesting the exception, generally pay therapists or other health care specialists higher rates than the guideline amounts.

Under existing § 413.106(b)(6), HCFA issues guidelines establishing the hourly salary equivalency amounts in geographical areas for therapy services furnished to Medicare beneficiaries under arrangements. These guidelines apply only to the amount of payment the Medicare program makes to a provider for therapy services obtained under arrangements. The guidelines are not intended to dictate or otherwise interfere in the terms of a contract that a provider may wish to enter into with a therapist or therapist organization. The guidelines do not apply to services furnished by employees of a hospital or employees of other providers. There is also an exception to the guidelines for inpatient hospital services provided by hospitals paid under the prospective payment system or subject to rate-of-increase limits (§ 413.106(f)(4)), in which case the services are evaluated under the Medicare program's reasonable cost provisions as described at § 413.5). The salary equivalency guidelines also will not be applied to skilled nursing facilities (SNFs) that are paid under the prospective payment system for therapy services provided under arrangements for cost reporting periods beginning on or after July 1, 1998. (This includes low volume SNFs currently electing prospective payment under section 1888(d) of the Act.) In addition, the salary equivalency guidelines will not be applied to HHAs who are paid under the prospective payment system for therapy services provided under arrangements for cost reporting periods beginning on or after October 1, 1999. The salary equivalency guidelines also will not apply for outpatient therapy services provided by a SNF or an outpatient rehabilitation

VOL 63 ISS 20 JA 30 1998 UMI

provider for services provided to SNF patients on or after July 1, 1998 when payment for those services is made on a fee schedule basis. (Providers of Part B outpatient therapy services provided to Medicare beneficiaries whose nursing home stays are not paid by Medicare will be paid on a fee schedule basis for services furnished on or after July 1, 1998.) The guidelines also will not apply to an outpatient rehabilitation provider, a comprehensive outpatient rehabilitation facility (CORF), an HHA providing outpatient rehabilitation services to patients who are not homebound, or the outpatient department of a hospital when payment for those services is made on a fee schedule basis beginning on January 1, 1999. Shown below is a chart outlining the provisions of the Balanced Budget Act of 1997. The salary equivalency guidelines will cease to apply to the enumerated provider types once the Balanced Budget Act provisions become effective.

Provider type	BBA provision	Effective date
Hospital Outpatient Therapy Services	Payment on a fee schedule basis	Calendar year 1999.
SNF Inpatient Services (Includes therapy services and applies to free-standing and hospital-based providers).	Payment on a Prospective Payment System basis.	Cost reporting periods beginning on or after July 1, 1998.
SNF Outpatient Therapy Services	Fee Schedule	For services beginning July 1, 1998.
CORFs (applies to free-standing and hospital-based providers).	Fee schedule	Calendar year 1999.
Outpatient Rehabilitation Providers	Fee schedule	Calendar year 1999.
CMHCs	Payment under the outpatient hospital Prospective System Payment basis.	Calendar year 1999.
Outpatient Therapy Services Provided by HHA But Not Under HHA benefit.	Fee Schedule	Calendar year 1999.
HHA Services (Includes therapy services and applies to free-standing and hospital-based providers).	Payment on a Prospective System Payment basis.	Cost reporting periods beginning on or after October 1, 1999.

* A $1500 annual limitation on services provided to Medicare beneficiaries will be applied beginning January 1, 1999 where therapy services are provided by providers under the outpatient physical therapy benefit (which includes speech language pathology services) and occupational therapy benefit.

However, we are establishing regulations that provide that the salary equivalency guidelines will apply in situations where compensation, at least in part, to a therapist employed by the provider is based on a fee-for-service or on a percentage of income (or commission). The entire compensation will be subject to the guidelines in cases where the nature of the arrangements are most like an under "arrangement" situation, although technically the provider may treat the therapists as employees. The guidelines will be applied in this situation so that an employment relationship is not being used to circumvent the guidelines.

The guidelines apply to SNFs providing therapy services under arrangements that elect prospective payment under section 1888(d) of the Act because that prospective payment system (PPS) only applies to routine and capital services and does not apply to ancillary services which include therapy services.

Section 413.106(d) provides that, prior to the beginning of a period to which a guideline will be applied, HCFA will publish a notice in the **Federal Register** establishing the guideline amounts to be applied to each geographical area by type of therapy. We have issued schedules of salary equivalency guidelines for the reasonable costs of physical therapy services since 1975, and for respiratory therapy services since 1978. On September 30, 1983, we published a final notice (48 FR 44922) that revised the methodology used to establish the schedules, as well as the guidelines themselves. The guidelines continue to apply to physical therapy and respiratory therapy services provided under arrangements, as set forth in § 413.106, with hospitals, home health agencies (HHAs), SNFs, hospital-based HHAs, hospital-based SNFs, CORFs, and outpatient rehabilitation providers (ORPs). (Since we are issuing guidelines for occupational therapists, the guidelines also will apply to community mental health centers (CMHCs) that provide occupational therapy services furnished under arrangements. However, because CMHC therapy services will be paid under the outpatient hospital prospective payment system beginning with services furnished during calendar year 1999, at that time the guidelines will no longer apply to those occupational therapy services).

The September 30, 1983 final notice provided that, for providers with cost reporting periods beginning after October 1, 1982, the published guidelines would be revised upward by the projected 0.6 percent monthly inflation rate, not compounded. It also provided that, if for any reason we did not publish a new schedule of guidelines to be effective for cost reporting periods beginning on or after October 1, 1983 or did not announce other changes in the existing schedule, the existing guidelines would remain in effect, increased by the projected 0.6 percent monthly inflation rate, not compounded, until a new schedule of guidelines was issued. This monthly inflation rate was based on a Data Resources Incorporated (DRI) forecast of the annual rate of increase in each component of the salary equivalency amounts (that is, salary, fringe benefits, rent, and other expenses), with each component weighted to form a composite rate of increase for the 12-month period ending March 31, 1984.

II. Provisions of the March 28, 1997 Proposed Rule

On March 28, 1997 we published in the **Federal Register** a notice of proposed rulemaking (62 FR 14851) that proposed changes in the methodology used to establish the salary equivalency guidelines. We proposed to establish salary equivalency guidelines for occupational therapy and speech-language pathology services that are contracted by providers. We also proposed to revise the guidelines that were currently in place for contracted physical therapy and respiratory therapy services. In the proposed rule:

- The prevailing hourly salary rates were derived:

—From the 75th percentile of hourly therapist salaries of blended data from several sources of hospital and SNF wage rate data (weighted by relative employment levels in hospitals and nursing homes) to develop a national "best estimate" of prevailing salary levels as a basis for the guidelines.

—We calculated guideline levels for fourth quarter 1995 and trended forward to April 1998.

- We computed fringe benefits as a percent of total compensation using fiscal year 1994 Medicare cost reports for hospitals under the prospective payment system.
- The expense component was based on an estimate of the costs of maintaining a therapy services office.
- The standard travel allowance was set at 50 percent of the hourly salary equivalency amount.
- The published amounts were to be adjusted to take into account projected rates of inflation that occurred after the initial effective date.

The proposal provided for a 60-day period for public comment. The proposed rule also provided that the guidelines would not be effective until at least 60 days after the date of publication of the final rule.

We received 409 pieces of correspondence on the proposed guidelines. A significant number of comments focused on major aspects of the proposed methodology that required us to perform an extensive evaluation of the methodology before revised guidelines could be issued. A summary of the public comments and our responses follow.

III. Summary of Public Comments and Departmental Responses

A. Data Sources for Salary Equivalency Guidelines

We proposed to use the latest available Bureau of Labor Statistics (BLS) hospital occupational/industry wage survey data along with data from several other sources of hospital and nursing home data to develop the salary equivalency guidelines. This was the first time that we had proposed using data sources in addition to the BLS data in issuing the salary equivalency guidelines. We based this decision on the following:

First, BLS carried out its last hospital occupational/industry wage surveys in 1989 and 1991 and for budgetary reasons has discontinued conducting this survey. Accordingly, even if we had chosen to use BLS survey data as our primary source for the proposed rule, we would have needed to investigate other rehabilitation therapy survey data sources for projecting the 1989 and 1991 data to a current base period such as 1995 and for use in future guidelines. In addition, although the 1989 and 1991 BLS survey data continue to meet the rigorous publication standards of BLS and provide the only statistically reliable national/regional data for wages by occupation of which we are aware, questions have been raised as to whether the BLS data meet the Senate Committee on Finance's recommendation on timeliness. We took this concern into consideration explicitly in the proposed rule. Furthermore, the BLS hospital occupational/industry wage surveys of 1989 and 1991 include only hospital data. The last BLS nursing home occupational/industry wage survey was conducted in 1985. We believed it was reasonable to use combined hospital and SNF wages in the determination of the guidelines as was done previously because therapist wage levels are primarily determined in occupational labor markets, not in separate or isolated industry labor markets. We also needed to review the SNF therapist data so that we could determine the wage levels in SNFs holding all other factors constant (including local labor market conditions, and working conditions).

Comment: We received numerous comments regarding the strengths and weaknesses of the various data sources that we proposed to use to determine the guidelines.

Response: We intend to utilize five additional data sources for hospital wages and two additional data sources for freestanding SNF wages, each of which we discuss in detail below. We acknowledge the commenters observations of strengths and weaknesses present in several of the data sources. However, to delete any one data source would give more weight to the remaining data sources, which have their own strengths and weaknesses. To delete any data source with any weakness relating to statistical reliability would leave only the BLS data which are not as timely as we would have preferred. Although we received many comments about the strengths and weaknesses of the various data sources that we did use, we did not receive compelling evidence to either add or delete any data source or change the equal weight given to each data source.

A summary of the different data sources appears below the summaries of the public comments we received and our responses to those comments.

1. BLS Data—General

BLS collected average hourly earnings (AHE) data for all four types of therapists in 1989. However, the January 1991 BLS survey included only the average hourly earnings for full-time physical and respiratory therapists (BLS January 1991 average hourly earnings for full-time physical and respiratory therapists were found in the BLS *Occupational Wage Survey: Hospitals*, January 1991, pp. 36–119). The hospitals in this survey employed 50 or more workers. We therefore needed to estimate 1991 average hourly wages for speech language pathologists and occupational therapists at the full labor market rate. To do so, we started with the BLS 1989 survey of all four types of therapists as a baseline (*BLS Industry Wage Survey: Hospitals*, March 1989 (the latest previous survey), pp. 33–118). The hospitals in the 1989 survey employed 100 or more workers. Our analysis of the University of Texas survey data for U.S. hospitals indicated that the wages for speech language pathologists and respiratory therapists increased at similar rates between 1989 and 1993. Wages for occupational therapists also increased at rates similar to that for physical therapists during that period. Therefore, we determined that we could employ the 1991 to 1989 growth rates of respiratory therapist wages and of physical therapist wages in order to estimate 1991 wage levels for speech language pathologists and occupational therapists, respectively.

To update the data for the four therapist types from 1991 to later periods, we derived rates of increase for the period from January 1991 through January 1994 (the period which predates the additional data sources that HCFA used) and based 50 percent on American Hospital Association Panel wage data and 50 percent on the average hourly earnings for hospital workers published by the BLS Current Employment Statistics Survey, SIC Code 806 (Hospitals). The additional industry data sources, detailed below, that HCFA used were surveyed in 1994–1995.

For the period from January 1994 through October 1995, we updated the BLS occupational industry wage data for the four therapy types using the BLS Current Employment Statistics Survey for hospital worker hourly earnings. By incorporating the American Hospital Association data, which had a higher rate of increase than the BLS data during the January 1991–January 1994 period, HCFA captured the relatively faster growth in therapist wages during the period, resulting in wage levels that reflected current market conditions in January 1994. As mentioned above, we used the BLS Current Employment Statistics Survey to trend therapist wage increases from 1994 to 1995.

Comment: One commenter stated that most data sources that HCFA used, especially BLS and Mutual of Omaha, were not statistically valid. Specifically, the commenter argued that the BLS data were biased and the extrapolation of the BLS survey to non-surveyed areas was

VOL 63 ISS 20 JA 30 1998 UMI

not a valid statistical procedure, especially since there was no known relationship between surveyed areas and non-surveyed areas. Several commenters noted that the National Association for the Support of Long-Term Care (NASL) and the American Health Care Association (AHCA) surveys provide timely and accurate data and should be the only data sources used for the salary equivalency guidelines in SNFs. One commenter concluded that the BLS survey had a "high response rate" and the data were reliable.

Response: We agree that no available data source is ideally suited for all purposes. The data sources used may contain biases that we were unable to remove using standard statistical editing routines. We believe that the biases go in both directions and tend to offset each other. Given that the mean hourly wages of therapists generally cluster in rather small ranges, we believe that an average of the various sources, including any inherent biases, fairly represents the national wage rate for each of the four therapist types. We agree that the NASL and AHCA databases are timely, but each has shortcomings regarding representativeness. We address specific comments concerning the Mutual of Omaha data and the issue of separate salary equivalency guidelines for each setting later.

Comment: One commenter stated that Congress does not want HCFA to use the BLS data because Congress discontinued funding for these surveys in 1992.

Response: Congress discontinued funding for these surveys for reasons unrelated to the salary equivalency guidelines. The BLS surveys were replaced by the Occupational Compensation Survey (OCS). We could not use the OCS because it did not contain the level of detail by occupation required for use in establishing salary equivalency guidelines.

2. National Association for the Support of Long-Term Care (NASL)

In March 1996, NASL, representing a portion of the rehabilitation therapy industry, submitted an October 1995 sample survey of salaried therapists in hospitals and nursing homes to HCFA, as allowed under our regulations. This survey did not meet the requirements of the regulations at § 413.106(b)(6), since the survey design, questionnaires, and instructions were not approved by HCFA prior to the start of the survey. The survey did provide data that were current in SNFs and hospitals, and some documentation was furnished. We, therefore, conducted a special analysis of this NASL survey data, including a limited audit of the survey records. Based on this analysis and limited audit, we determined that the survey was not adequate as a sole or primary source of data in determining the guidelines, but could be useful in combination with other data sources. There were several reasons for this determination:

- The data were not audited or certified by an independent party. We were permitted to conduct an audit of the survey records only under stringent restrictions designed to protect the confidentiality of the survey respondents. Those restrictions made it impossible for us to verify the survey results. For example, we were unable to compare submitted survey data with data from other sources.
- The verification survey, conducted to determine the reliability of data submitted by mail, did not appear to be adequate. Only five providers were included in the verification survey. Specifically, we were not satisfied that the verification sample was either sufficiently large or adequately representative.
- The survey is not sufficiently representative. There were variable response rates for hospitals and SNFs. The response rate for hospitals was 10.8 percent and the response rate for SNFs was 29.9 percent. In addition, the sample seemed to include an overrepresentation of large hospitals and chain-affiliated SNFs.

Because there is an underrepresentation of small hospitals and non-chain SNFs in the NASL survey, we cannot be assured with this small response rate that the large hospitals and chain-affiliated SNFs will adequately represent the small hospitals and non-chain SNFs not included in the survey. (The GAO stated in its report, "Medicare Early Resolution of Overcharges for Therapy in Nursing Homes is Unlikely", August 16, 1996, p. 7, regarding the NASL survey data, "However, the survey response rate was low (10 percent for hospitals and 30 percent for SNFs), which raises questions about how representative the data are." In a footnote on that page, GAO points out, "Official government surveys generate a much higher response rate. The BLS White Collar Pay Survey (one component of which was the hospital salary data survey on which the draft guidelines were based) has an overall response rate of 82 percent. Typically, BLS response rates exceed 80 percent)."

- Despite requests for the raw unedited data file, the file was not provided to us.
- We have questions about the validity of certain edits.
- We were also concerned that supervisory time and compensation in lieu of benefits were not consistently reported. Additionally, we were concerned that the supervisory time included in the NASL survey was above a certain threshold that we use in developing the guidelines.

Comment: Some commenters challenged HCFA's characterization of the NASL data and felt that HCFA should give greater weight to the NASL data for a variety of reasons.

Response: In general, the mean wages from the various data sources we used were rather tightly clustered. None of the commenters offered compelling evidence that NASL data should be weighted preferentially. Therefore, we did not change the weighting of any of the data sources used.

Comment: One commenter stated that the NASL data have response rates comparable to those achieved in unspecified BLS studies, hospital industry studies, and long-term care studies. The same commenter pointed out that the NASL data consisted of responses from 711 institutions while the BLS data were from 628 institutions. Another commenter stated that the NASL survey suffered from a low response rate.

Response: The NASL surveyed hospitals, hospital-based SNFs, and freestanding SNFs while the BLS surveyed hospitals only. The response rate of the BLS survey was 84 percent, in contrast to the response rate of the NASL survey, which was 20 percent in the aggregate (10 percent for hospitals and 29 percent for SNFs). We agree with the comment that the response rate for the NASL data was low with respect to statistical sampling theory. While, the validity and reliability of a sample survey depends primarily upon the representativeness of the sample, not on the number of responses (assuming an adequate sample size), we have concerns about the representativeness of the NASL survey. These concerns, along with the low response rate to the survey, lead us to believe that the NASL data should be given no greater weight than the data from other sources.

Comment: One commenter asserted that the NASL survey followed a rigorous statistical design in consultation with HCFA and that the NASL data were as good as the data HCFA used.

Response: HCFA did comment and make suggestions on some aspects of the statistical design. NASL did not, however, implement all of the suggestions that HCFA felt were necessary for a valid statistical design. Nevertheless, we are using the NASL data in conjunction with data from several other sources, giving it the same weight as all other data sources.

Comment: One commenter defended the quality of the NASL data by stating that HCFA performed an audit of the data, although limited by conditions set by NASL.

Response: The restrictions set by NASL were such that essentially all that HCFA was able to perform during its on-site visit to NASL was a review. The data were not audited or certified by an independent party. We were permitted to review the survey records only under stringent restrictions designed to protect the confidentiality of the survey respondents. Those restrictions made it impossible for us to verify the survey results. For example, we were unable to compare submitted survey data with data from other sources.

Comment: One commenter noted that the NASL survey benefitted from a verification survey.

Response: We concur that verification surveys are beneficial, but our review of the NASL survey disclosed that the number of provider verifications actually conducted was extremely limited. As stated earlier, there were only 5 verifications on 711 responses, a number too small to give statistical significance to the result.

Comment: Several commenters recommended that HCFA use only the NASL and/or AHCA data from SNFs to develop rates for SNFs.

Response: As stated above, HCFA has blended SNF and hospital data in our previous notice and we see no valid reason not to do so again. In addition, we found a number of shortcomings with the NASL data and the AHCA data, which we found to be biased toward SNF chains and to include some supervisory data. We edited the data as much as possible to improve data quality, but did not use either data source alone to develop rates for SNFs. We address the issue of separate salary equivalency guidelines for each provider setting later in this final rule.

Comment: Several commenters pointed out that the NASL data were the most timely data available.

Response: We agree that the NASL data were the most timely data available, but, as discussed earlier, timeliness alone does not sufficiently meet the criterion for validity and reliability.

Comment: One commenter noted that the NASL data were skewed toward larger hospitals.

Response: We concur that the sample responses were skewed toward larger hospitals as well as larger SNF chains but, as stated earlier, some of the other data sources are biased in other ways as well. The extent of response bias within the reweighted data is not possible to quantify without some additional survey work. Again, by combining data sources with different biases, we believe that the biases tend to offset each other as evidenced by the clustering of means.

3. Texas National Hospital Survey (1994 National Survey of Hospital and Medical School Salaries, University of Texas Medical Branch, Galveston, TX, 1994, pp. 15–19)

The University of Texas National Hospital Survey data are from October 1994. This annual survey of hospitals is voluntary. The survey has been conducted for many years for hospitals in various regions of the country to use as a benchmark of regional wage levels for specific health professional occupations. While there are data from all regions of the United States, the survey was not designed to meet the rigorous BLS standards for representativeness or statistical validity at the regional level. It does, however, give reasonable levels at the national level when compared to other data sources.

Comment: One commenter stated that it was inappropriate for HCFA to use the University of Texas survey of hospitals in the United States because the data "includes medical schools with a low wage bias to establish rates of pay for therapists that are working primarily in SNFs."

Response: The commenter's assertion is incorrect because the mean wages from the University of Texas data clustered with the mean wages from other data sources. Specifically, the University of Texas mean hourly wage ranged from being $0.19 higher to $0.83 lower than the mean hourly wage for the four therapy types using all the data sources—a range well within reasonable boundaries associated with statistical variation. For physical therapists, the University of Texas mean wage was $20.29; the mean wage from all sources of hospital wage data was $21.00, a difference of 3 percent. For occupational therapists, the University of Texas mean wage was $19.28; the mean wage from all sources of hospital wage data was $19.73, a difference of 2 percent. For speech language pathologists, the University of Texas mean wage was $18.58; the mean wage from all sources of hospital wage data was $18.67, a difference of less than one percent. For respiratory therapists, the University of Texas mean wage was $15.74; the mean wage from all sources was $15.58, a difference of negative one percent.

4. American Health Care Association (AHCA) Data

The AHCA report includes data on both SNFs and hospitals. The SNF data for January 1995 are both current and industry-specific. However, the data are unevenly edited and appear to include some supervisors and additional salary in lieu of benefits. The sample is heavily weighted by large chains that are members of the Association. The SNF data, unlike BLS data, appear as both employee-weighted and facility-weighted averages and, therefore, do not permit computation of a median or 75th percentile levels for individual workers.

Comment: One commenter objected to HCFA's observations concerning the 1994 and 1995 AHCA survey data and indicated that HCFA's criticisms were unreasonable, given the lack of alternative sources and the constant enhancement of the AHCA database since 1987. In particular, the commenter objected to HCFA's observations that the AHCA data were "unevenly edited and appear to include supervisors and additional salary in lieu of benefits," stating that HCFA fails to acknowledge discussions addressing these issues. The same commenter suggested that HCFA give the AHCA data greater weight because they were both timely and accurate, noting that: (a) AHCA data are exhaustively and consistently screened and cleaned with participants and the database is certified by Buck Consultants as being representative; (b) Buck Consultants has taken steps to insure that supervisory data are excluded from the data; (c) there are no wages or salary in lieu of benefits in the data; and (d) this is an annual study, given the same scrutiny each year and, therefore, should increase the degree of confidence that HCFA has in the data. Other commenters acknowledged the bias in the AHCA data toward large chains and indicated that HCFA could correct the AHCA survey for large company bias as well as individual data point analysis and exclusion of supervisory rates.

Response: We acknowledge the steps taken to improve the quality of the AHCA data over time, and agree that the quality of the data has improved. Our analyses of the 1994 and 1995 AHCA survey indicate that the survey is still not representative of Medicare-certified facilities; it represents primarily large chains that are members of AHCA. We

VOL 63 ISS 20 JA 30 1998 UMI

made the same observations as did some commenters regarding AHCA data deficiencies and took steps to exclude supervisory data. HCFA did not have the necessary information to correct for large company bias. We believe that the biases tend to offset the data as evidenced by the clustering of mean wages. Further, individual worker data are not available to validate the reasonableness of the means for each institution. For these reasons, it would not be appropriate for HCFA to modify the weights given to the AHCA data, or to use these data as the sole source in developing the salary equivalency guidelines.

Comment: Another commenter asserted that the NASL and AHCA data probably contained more responses from therapists than were contained in the BLS studies and that the occupational nature of therapists should outweigh the industry focus created by counting numbers of institutions.

Response: The 1989 and 1991 BLS samples had responses from 536 and 628 hospitals, respectively. The 1989 and 1991 BLS data that we used contained responses from 12,672 certified therapists as follows: 3,668 in physical therapy (1991); 1,742 in occupational therapy (1989); 668 in speech language pathology (1989); and 6,594 in respiratory therapy (1991). The post-edit NASL survey had responses from 191 hospitals, 50 hospital-based SNFs, and 351 freestanding SNFs. The post-edit NASL survey contained responses from 5,741 registered/certified therapists as follows: 1,720 in physical therapy; 1,204 in occupational therapy; 680 in speech language pathology; and 2,137 in respiratory therapy. The AHCA data contained responses from 3,515 certified therapists: 1,806 physical therapists; 1,405 occupational therapists; and 304 speech language pathologists. The commenter was apparently seeking to give more weight to the NASL and AHCA data because "the number of therapists reported in the NASL and AHCA survey probably exceeds the numbers reported in the BLS studies * * *" implying that the two industry data bases are more reliable for that reason. In fact, the BLS studies (12,672 therapists) we used contained 37 percent more therapists than the NASL and AHCA data combined (5,741 and 3,515, respectively).

5. Maryland Health Services Cost Review Commission Data

The Maryland Health Services Cost Review Commission conducts an annual census of occupational wage rates for all Maryland hospitals. We analyzed data from the 1995 census. While this is a complete census covering over 50 hospitals, it is for Maryland only. In addition, speech-language pathologists are not included as a separate occupational category.

Comment: One commenter noted that the Maryland Health Services Cost Report Commission's database is not representative of the United States because the data are from only one State. Further, the commenter noted that speech language pathologists are not separately identified in the data.

Response: Despite its shortcomings, the strengths of the Maryland census are that it is timely, accurate, and contains data from providers of various sizes in geographically diverse urban and rural areas. It is a rich data source for variations in occupational wage levels by degree of urbanization. In fact, the mean hourly wage for physical therapists in the Maryland data was $20.78; the mean wage from all sources of hospital wage data was $21.00, a difference of only 1 percent. The mean hourly wage for occupational therapists in the Maryland data was $20.60; the mean wage from all sources of hospital wage data was $19.73, a difference of 4 percent. The mean hourly wage for respiratory therapists in the Maryland data was $16.20; the mean wage from all sources of hospital wage data was $15.58, a difference of four percent. We used the data because we concluded that its strengths outweighed its weaknesses for our specific purpose.

6. 1995 American Rehabilitation Association (ARA) Salary Survey

The ARA collected July 1994 data from its members that are medical and residential rehabilitation providers. Among ARA members are CORFs that provide physical therapy, respiratory therapy, speech language pathology, and occupational therapy services to Medicare and Medicaid beneficiaries. The response rate was low and the Association indicated in its report that these data cannot be presumed to represent the full population of rehabilitation facilities. However, this survey appears to give reasonable wage levels at the national level when compared to other data sources. Information on SNFs was not reported due to an inadequate sample size.

Comment: One commenter noted that the ARA survey had a low response rate and that it could not be assumed to be representative. Another commenter noted that despite the low response rate, the results appeared to yield reasonable wage levels nationally.

Response: We agree with the observations of both commenters. Although the data could not be assumed to be representative, they were reasonable and fairly close to the other data sources we used. In fact, the mean hourly wage for physical therapists in the ARA freestanding hospital data was $20.82; the mean wage from all sources of hospital wage data was $21.00, a difference of less than 1 percent. The mean hourly wage for occupational therapists in the ARA freestanding hospital data was $18.90; the mean wage from all sources of hospital wage data was $19.73, a difference of only 4 percent. Similarly, the mean hourly wage for physical therapists in the ARA rehabilitation unit data was $21.12; the mean wage from all sources of hospital wage data was $21.00, a difference of less than one percent. The mean hourly wage for occupational therapists in the ARA rehabilitation unit data was $19.82; the mean wage from all sources of hospital wage data was $19.73, a difference of less than one percent. As is the case with the other data sources, we used the ARA data because we concluded that its strengths outweighed its weaknesses.

7. Mutual of Omaha Data

Mutual of Omaha, an HCFA intermediary, conducted a survey of about 2,000 Medicare SNF providers in 1995. Data were collected on contract therapy prices and salary rates for occupational therapy and speech language pathology.

Comment: Several commenters stated that the Mutual of Omaha survey was not statistically valid because of inadequate sample design, no analysis of respondents vs. nonrespondents, too small a sample size, overrepresentation of hospital-based SNFs and contract therapists, no physical therapist or respiratory therapist data, and data that were limited to aggregate facility data as opposed to data points for each employee. The weight of many comments is reflected in their assertions that the average wage rates of occupational therapists and speech language pathologists reflected in the Mutual of Omaha data are out of line with other data sources.

Response: We agree that the Mutual of Omaha survey does not meet the rigorous sample design requirements of the BLS survey data included in our estimates. However, we did use it in combination with the other described data sources. The Mutual of Omaha data are similar to other data sources such as AHCA and the American Rehabilitation Association (ARA) that reflect universes other than the national. The Mutual of Omaha estimate of the mean hourly wage level of occupational therapists in SNFs in October 1995 that we used in the salary computation was $22.90, compared to the mean wage rate of all SNF data sources of $20.33. The Mutual of Omaha mean wage rate for occupational therapy is thus 13 percent above the mean wage rate of all data sources. The Mutual of Omaha mean wage rate for speech language pathologists in SNFs in October 1995 was $20.34 compared to the mean wage rate of $19.26. The Mutual of Omaha mean wage rate for speech language pathologists is thus 6 percent above the mean wage rate of all SNF data sources.

8. Unused Data Source—"A Study of Respiratory Care Human Resources in Hospitals 1992"

This survey was conducted by the American Association of Respiratory Care's (AARC) Task Force on Professional Direction in conjunction with consultants from Arthur Andersen & Co. The AARC surveyed 2,732 of 4,900 hospitals having respiratory care departments and received 858 responses (31 percent response rate), comprising 17 percent of all hospitals with respiratory care departments.

Comment: One commenter inquired as to why HCFA did not use this study by AARC in conjunction with consultants from Arthur Andersen & Co.

Response: HCFA used data from academic (e.g., University of Texas), government and industry-wide surveys for hospitals, SNFs, etc. that included occupational specific data. HCFA did not use data sources specific to one occupational category from its own professional association, e.g., American Occupational Therapy Association data. Using specific occupational data from a particular association may have biased the results relative to the other occupational categories, given the wide discretion used in defining wages, income, and statistical design among the four occupational groups.

B. Methodology

In order to establish the proposed hourly salary equivalency amounts, we determined the "best estimate" of wages for both hospitals and SNFs. We first found mean wage rates for each of the data sources listed above.

BLS surveyed average hourly earnings (AHE) for all four therapies in 1989. However, their January 1991 survey included the average hourly earnings only for full-time physical and respiratory therapists. (BLS January 1991 average hourly earnings for full-time physical and respiratory therapists were found in the BLS Occupational Wage Survey: Hospitals, January 1991, pp. 36–119. The hospitals in this survey employed 50 or more workers.) We, therefore, needed to estimate 1991 average hourly wages for speech language pathology and occupational therapy. To do so, we started with the BLS 1989 survey of all four therapies as a baseline (BLS Industry Wage Survey: Hospitals, March 1989 (the latest previous survey), pp 33–118). The hospitals in the 1989 survey employed 100 or more workers. Our analysis of the University of Texas data for U.S. hospitals indicated that the wages for speech language pathology and respiratory therapy increased at a similar rate between 1989 and 1993. Wages for occupational therapy and physical therapy also increased at a similar rate during that period. Therefore, we determined that we could employ the 1989 ratios of speech language pathology to respiratory therapy, and of occupational therapy to physical therapy, in order to estimate 1991 wage levels for speech language pathology and occupational therapy. Specifically, multiplying the ratio of 1989 average hourly occupational therapy wages to 1989 average hourly physical therapy wages by 1991 physical therapy wages yielded estimated 1991 occupational therapy wages. The following formula summarizes the computation (all values are average hourly wages):

[(March 1989 AHE, OT) / (March 1989 AHE, PT)] × (January 1991 AHE, PT) = (estimated January 1991 AHE, OT).

Similarly, multiplying the ratio of 1989 average hourly speech language pathology wages to 1989 average hourly respiratory therapy wages by the 1991 average hourly respiratory therapy wages yielded estimated 1991 average hourly speech language pathology wages. Again, the following formula summarizes the computation (all values are average hourly wages):

[(March 1989 AHE, speech language pathology) / (March 1989 AHE, respiratory therapy)]×(January 1991 AHE, respiratory therapy) = estimated January 1991 AHE, speech language pathology.

The American Health Care Association data provided facility-weighted mean wage rates for SNFs. The Association has estimated that 5 percent of the SNF wage rates represented supervisors and additional wages paid in lieu of fringe benefits. We used that estimate to reduce the Association survey wage data to a nonsupervisory, no additional salary in lieu of benefits basis.

We converted annual data in the American Rehabilitation Association and University of Texas surveys to hourly wages using a divisor of 2080 hours, which represents a standard work year.

The Maryland Health Services Cost Review Commission census data provided wage data, paid hours, and numbers of personnel for each hospital. We eliminated data for employees who worked less than 35 hours or more than 40 hours a week to restrict the computation to full-time employees only. We then determined the average hourly wage for each hospital by dividing aggregate wages by the number of paid hours. Finally, we computed the average hourly wages across all hospitals, weighted by the number of employees in each hospital.

NASL data were first divided by 52 to arrive at weekly salary, then divided by the number of hours worked per week which were also given in the survey, to obtain hourly wage rates. As in the case of the Maryland census data, we eliminated data for employees who worked less than 35 hours, or more than 40 hours a week to restrict the computation to full-time employees only.

We trended all data to the 1995 fourth quarter as described in detail in the March 1997 proposed rule. We then determined the salary equivalency guideline amounts for 1998 in five steps. Those five steps were: (1) Determine average wages by therapy type, separately for hospitals and nursing homes; (2) blend the hospital and nursing home average wages by therapy type, to yield average wages by therapy type for the four occupational markets; (3) approximate the 75th percentile of wages by therapy type; (4) calculate salary equivalency guideline levels for fourth quarter 1995, by adding amounts for fringe benefits, rent, etc.; and (5) update these guideline amounts to April 1, 1998, the proposed effective date.

In the first step, we determined the mean wage levels, by therapy type, for hospitals in each of the available data sources. (Data sources used for hospitals were: BLS, Industry Wage Survey: Hospitals, March 1989 and

VOL
63
ISS

1998
UMI

Occupational Wage Survey: Hospitals, January 1991; University of Texas *1994 National Survey of Hospital and Medical School Salaries;* American Rehabilitation Association's surveys of freestanding hospitals and of rehabilitation units, *1995 Salary Survey;* Maryland Health Services Cost Review Commission's census of hospitals; American Health Care Association hospital report's data profile, *1994 AHCA Survey;* and NASL 1995 survey of hospitals). We similarly determined the mean wage levels, by therapy type, for nursing homes in each of the available data sources. (Data sources used for SNFs were: 1995 NASL survey of SNFs; American Health Care Association survey of SNFs, *1995 AHCA Survey;* and the 1996 survey of SNFs by Mutual of Omaha). We then averaged the mean wage levels from the available data sources by therapy type, separately for hospitals and nursing homes.

In the second step, we blended the hospital and nursing home average wage levels, by therapy, to yield average wage levels by therapist type across the four occupational markets. We employed a blending process used in the previous salary equivalency guidelines notice (48 FR 44922, September 30, 1983), to weight the occupational averages by relative employment levels in hospitals and nursing homes, respectively. To establish appropriate weights, we used employment of therapists in nursing homes (Standard Industrial Classification (SIC) Code 805) and in hospitals (SIC Code 806), as found in the BLS Occupational Employment Statistics survey (OES). (The most recent available survey of employment in nursing homes is for 1993, while the most recent survey data of employment in hospitals is for 1995.) We applied these weights to the mean hospital and SNF wage rates by the four therapist types as determined in the first step. The BLS Occupational Employment Statistics survey shows that the hospital industry is a major employer of therapists of all types, while SNFs employ fewer salaried therapists. The weights for hospitals and nursing homes, respectively, are: for physical therapy, 85 percent and 15 percent; for occupational therapy, 85 percent and 15 percent; for speech language pathology, 82 percent and 18 percent; and for respiratory therapy, 99 percent and 1 percent.

In the third step we approximated the 75th percentile of the blended wage rates for each therapy occupation. It was necessary to approximate the 75th percentile because, unlike our previous computations of the guidelines, in this proposal we could not determine percentile values directly from each of the sources. We have observed in the BLS data and a regression analysis we performed on NASL data that the 75th percentile was approximately 110 percent of the mean. We, therefore, proposed to increase each of the four blended wage averages by 10 percent to approximate the 75th percentile of wages in each discipline across the occupational market. (In response to comments on the proposed rule, however, we have increased the factor to estimate the 75th percentile from 110 percent of the mean to 112 percent of the mean to reflect inherent variations that we were not able to quantify.) The inherent variations are due to estimating national rates for each of the four rehabilitation therapies, then using the GPCI to approximate wage and fringe levels in all geographic areas of the United States. Data does not exist to verify that, for each of the four therapies, every local labor market in the United States is accurately portrayed by the GPCI.

Salary equivalency guidelines are based on the therapists' time in the facility. Adjustments to average hourly earnings data were necessary to include a reasonable allowance for vacation, sick leave, and administrative time. In order to convert the average hourly earnings from an hours paid basis to an hours worked basis, we applied a factor of total paid hours divided by hours worked (2,080 ÷ 1,808) to the average hourly earnings determined thus far, which is the same methodology used in the previous notice. The 1,808 figure was computed based on 2,080 hours (40 hours/week × 52 weeks; a standard work year) less 15 vacation days, 10 sick leave days and 9 holidays equal to 34 days, or 272 hours. Data on leave benefits come from the BLS Employee Benefits Survey. (U.S. Department of Labor, Bureau of Labor Statistics: *Employee Benefits in Small Private Establishments, 1992,* Bulletin 2441, U.S. Government Printing Office, May 1994, pp. 10–20.)

In the fourth step, we added fringe benefit and expense factors to the prevailing salary rates determined for each therapy type. The fringe benefit and expense factors are intended to recognize fringe benefits that are received by an employee therapist, as well as overhead expenses that a therapist or therapist organization might incur in furnishing services under arrangements. These factors are expressed as percentages of the prevailing hourly rate and are applied to every hour of service furnished at the provider site. Fringe benefits may include vacation and sick pay, insurance premiums, pension payments, allowance for job-related training, meals, severance pay, bonuses, etc.

We computed fringe benefits as a percent of total compensation using fiscal year 1994 Medicare cost reports for hospitals under the prospective payment system. We believe these data are the best proxy for therapist fringe benefit information, which is not available for SNFs. We used the Medicare cost reports for prospective payment system hospitals to obtain fringe benefit information because these data are carefully scrutinized; they are used to adjust the labor portion of hospital payments under the prospective payment system. Also, the BLS Employment Cost Index (ECI) for March 1994 showed that fringe benefits for professional and technical workers in hospitals and nursing homes were similar. In the proposed rule, the fringe benefit component was about 14 percent of the total salary equivalency guideline amount. In the final rule, we have, instead, added the amount determined from the adjustment to average hourly earnings for vacation, sick leave, and administrative time to the fringe benefit amount excluding leave determined from the hospital cost reports. By including paid leave in fringe benefits rather than in salary, the final weight for fringe benefits is about 20 percent of the guideline amount or about 28 percent of total compensation.

The expense component takes into account expenses a therapist or therapist organization might have, such as maintaining an office, purchasing insurance, etc. We based the expense component of the guidelines on an estimate of the costs of maintaining a therapy services office. The general methodology for computing the expense component is similar to that used in the September 30, 1983 notice (48 FR 44922) but the factors have been revised. This component has rental and non-rental portions.

To determine the rental portion of the expense component, we used the 1995 rental rate data compiled by the Building Owners and Managers Association International (BOMA) and published in the 1996 BOMA Experience Exchange Report for Downtown and Suburban Office Buildings. (Building Owners and Managers Association International: *1996 BOMA Experience Exchange Report,* Washington, DC, 1996, p. 17.) BOMA reported a national rent average, excluding utility cost, of $18.37 per square foot per year. We applied an occupancy factor of .887 to take into account the space used for rental building hallways, elevators, etc., that are included in the BOMA rent figure, but are not part of the area rented for an office. We then added the BOMA utilities cost of $1.82 per square foot. We determined total rental cost, assuming a rental area of 250 square feet, the same rental area used in prior schedules of guidelines. The total 1995 rental cost was divided by 1,808 (the hours factor applied to average hourly earnings) to compute rental cost per hour worked in 1995.

The expense component includes costs of maintaining an office, such as wages and salaries of administrative and clerical help, insurance, telephones, etc. Medicare pays for services at their reasonable cost. It has been reported to HCFA that an effective and efficient rehabilitation therapy firm incurs overhead expenses of about 25 percent. We estimate this component, including rent, to be within a reasonable cost range of 28.2 percent of total expenses in 1995. The 1995 rent per square foot amount and the other expenses amount were constant across the four therapy types, implying that the share of these costs vary by therapy type (the share for rent is lowest for physical therapy since the physical therapy wage rates are the highest).

As described in detail in the proposed rule, we added the fourth quarter 1995 dollar values of the "blended" wages, fringe benefits, rent, and the remainder of the other expenses factors to obtain salary equivalency guideline amounts for fourth quarter 1995. We updated the resultant fourth quarter 1995 salary equivalency guideline amounts to April 1998, using a Standard & Poor's DRI 1997:4 forecast.

1. Occupational Labor Market

In calculating the salary equivalency guidelines proposed on March 28, 1997, HCFA used a blend of hospital and SNF therapist wages. We also used a blend of hospital and SNF therapist wages in the establishment of salary equivalency guidelines for physical and respiratory therapy in the September 30, 1983 notice. The use of a blended wage reflects the influence of occupational labor market conditions on rehabilitation therapist wages, given the substantial degree of mobility between the settings. In the proposed rule, the labor market for therapists was characterized as an integrated occupational market in which therapists working in hospitals and SNFs have the potential to migrate between the two settings with relatively little difficulty resulting from differences in job requirements. We noted, however, that wage levels across settings for the same occupation may differ due to reasonable compensating wage differentials associated with working conditions, risk of injury, and geographic location. Wage differentials may also be associated with differences in worker characteristics, such as experience and skill. When these factors are taken into account, the ability to move across settings should ensure that the wage levels between these settings bear a reasonable relationship over time.

Comment (general): Many of the comments on the proposed rule have focused on the issue of compensating wage differentials, asserting that HCFA should not blend wages of hospital and SNF therapists in the establishment of salary equivalency guidelines. These comments maintain that wage differentials that exist between the two settings can be fully explained by a combination of higher skill requirements and a less agreeable work setting in SNFs. For this reason, commenters claim that the full difference in wages should be recognized by HCFA.

Response: The assertion that differences in skills and work environment fully explain current differences in wage rates rests on the assumption that compensating wage differentials between hospitals and SNFs are equivalent to the actual wage differentials observed at a point in time. However, there are a number of factors which may cause actual wage differentials to vary from those associated solely with differences in skills or environment. These factors include adjustments to short-term shifts in demand, entrance barriers to the therapy professions which have slowed adjustment to these shocks, and distortions to the operation of markets for therapy services and labor within the SNF sector caused by the inflation of prices and wages by Rehabilitation Therapy Firms (RTFs) to quickly gain market share as well as the lack of sufficient efforts to minimize costs by SNFs.

HCFA contracted with Standard & Poor's DRI to study this issue. Their data indicate that HCFA's proposed salary equivalency rates, incorporating the adjustment to the 75th percentile of the wage distribution, are more than sufficient to cover legitimate compensating wage differentials for skills and work environment in SNFs, as well as the wage differential which would result from increases in demand for therapy services in SNFs given cost-minimizing behavior by SNFs and RTFs.

Comment: Some commenters stated that there is no legal foundation for using a blended wage rate for hospitals and skilled nursing facilities to set salary equivalency rates.

Response: We do not believe that the statute prohibits use of a blended wage rate. We used a methodology based on blending wages from therapists in hospitals and SNFs in the September 30, 1983 notice which revised salary equivalency guidelines for physical and respiratory therapists. In that notice, HCFA established the prevailing salary component based on a blended hourly wage for hospitals and nursing home hourly wage at the 75th percentile of the wage distribution. As discussed in more detail in the Statutory Issues section below, we believe that this approach comports with Congressional intent as expressed in the relevant legislative history.

Comment: One commenter stated that the growing wage differential between therapists in the SNF setting and those in the hospital setting implies that the labor markets for therapists in these two settings are separate and distinct. According to the commenter, this indicates that the concept of an occupational labor market cannot be used as the basis for establishing salary equivalency rates based on a blend of hospital and SNF wages.

Response: The key factor involved in determining the extent to which an occupational labor market is integrated is the substitutability of professional skills across settings. This determines the potential for mobility between the two settings. If workers can flow relatively freely across industry settings, and markets are functioning competitively, this means that wage rates in different settings will be influenced by the supply and demand conditions for that occupation in all settings. This does not mean that wages will be equivalent. Compensating wage differentials for differing skills and environments will result in a reasonable relationship of wages across all settings.

The term "occupational labor market" implies some range of shared, and, therefore, substitutable skills. The question then becomes whether the extent to which skills required in the two settings are overlapping, whether the educational requirements are similar, and whether substantial retraining is required in order for therapists to move from one setting to another. An examination of these issues for therapists in hospitals versus SNFs indicates that the required educational qualifications and skills are extremely similar. All therapists complete the same accredited education programs and substantive retraining for individuals moving between these two settings is not standard. For therapists

VOL 63 ISS 20 JA 30 1998 UMI

employed in hospitals and SNFs, it is clear that, while not identical, the skills needed to perform their jobs are highly substitutable. This is evidenced in commenters' observations by the shift in employment of roughly a quarter of physical therapists and speech language pathologists formerly employed in hospitals who have been moved to SNFs or HHAs without substantive retraining. In addition, both hospitals and SNFs routinely hire occupational therapists, physical therapists, and speech language pathologists directly out of college, indicating that the body of required skills is covered by the general educational programs completed by all accredited therapists.

The existence of actual wage differentials between two settings does not indicate that an integrated occupational labor market does not exist. These differences are not solely those associated with different skill requirements or working conditions. Short-term differentials may reflect disequilibrium in response to rapid shifts in employment in the presence of transaction costs, costs of information, and lags in the adjustment of the occupational labor supply. These are reasonable wage differentials that are consistent with cost minimizing behavior. Differentials may also reflect differences in incentives to minimize costs between the two settings.

The fact that SNFs may have little economic incentive to minimize costs, beyond the point where they are subject to risk of audit, will likely result in higher relative prices for therapy and higher therapist wages in the SNF sector. Rehabilitation therapy firms may take advantage of this incentive structure to push prices and wages beyond prudent buyer rates. Because SNFs have little incentive to switch suppliers unless the price is far above their current rates, higher prices will not cause the rehabilitation therapy firm to lose market share. There is no market pressure to push prices down and less pressure for rehabilitation therapy firms to minimize costs than would be the case in competitive cost-minimizing markets.

Comment: Some commenters were concerned that therapists attracted to SNFs and HHA settings are different from those attracted to hospitals and, therefore, do not compete in the same labor market. The wage differential between hospitals and SNFs is a reasonable compensating wage differential associated with these differences in skills and work environment. These differences make it harder for SNFs to recruit qualified therapists. Specific differences between hospitals and SNFs cited by commenters were:

(a) Therapists in SNFs must work independently with less supervision. For this reason, SNFs require a more experienced workforce.

(b) The work environment in SNFs is less appealing than that in hospitals.

—There is less variety in the case mix,

—Smaller therapy departments in SNFs mean less collegiality, less potential for advancement, and fewer opportunities for training; and

—Patients in SNFs are more difficult to work with.

Response: We agree that compensating wage differentials potentially exist between different work settings for therapists. In using a blended hospital/SNF wage rate as the basis for salary equivalency rates, the question is the magnitude of these differentials and whether they are covered by the use of the blended wage rate at the 75th percentile of the wage distribution.

In response to industry requests for additional statistical research on this issue, we contracted with Standard & Poor's DRI to estimate the magnitude of justifiable wage differentials for physical and occupational therapists, and speech-language pathologists. The resulting data presents estimates of compensating wage differentials associated with skills and work environment across industry settings for 1979–89, wage differentials associated with short-term labor market disequilibrium under conditions of cost-minimization, and wage premiums resulting from the failure of many SNFs to behave as cost-minimizers.

The DRI data estimated a net compensating wage differential associated with education, experience, and work environment which is very small in comparison to the actual disparity in wages between the two sectors in 1995. The conclusion of this study was that our proposed salary equivalency rates, based on the blended wage approach, were more than sufficient to cover reasonable compensating wage differentials between hospitals and SNFs and an additional positive short-term differential for SNF therapist wages associated with the estimated increase in the relative demand for therapists in SNFs under the condition that SNFs behave as cost-minimizers.

The commenters maintained that the current disparity of wages is solely reflective of compensating wage differentials associated with the underlying fundamentals of skills and work environment. However, the actual wage differential will be equal to the compensating wage differential only in cases where product and labor markets are competitive (i.e. suppliers, providers and consumers are cost minimizers) and in equilibrium. Neither of these assumptions are met in the case of the labor market for therapists in rehabilitation therapy firms and SNFs.

The nursing home reform requirements of the Omnibus Budget Reconciliation Act of 1987 (OBRA '87), which took effect in 1990, caused a rapid increase in the relative demand for therapist labor in SNFs. The continued shift of employment from hospitals, educational institutions, and other settings towards SNFs, which is associated with the current observed wage differential, means that the occupational labor market has not yet reached equilibrium. This indicates that some part of the wage disparity between hospitals and SNFs is reflective of continued efforts to sharply increase the share of the pool of therapists who are employed in SNFs over a fairly short period of time.

In the presence of costs associated with changing jobs and costs of information about available positions and associated wage rates, these efforts can be expected to result in a temporary wage differential even with cost minimizing behavior. This effect is heightened by constraints on the number of new graduates from accredited therapy programs, since job mobility is less costly for new graduates than established therapists. Long queues for entry into accredited therapy programs indicate that current occupational wages are well above the level needed to attract new entrants to the professions. This suggests that difficulties in expanding the capacity of educational programs is contributing to the cross-sectoral adjustment process. These effects on therapist wages in SNFs are beyond the control of the SNFs in minimizing costs, and should therefore be covered by salary equivalency guidelines.

DRI also has shown that the market for therapy services in SNFs does not function in the normal parameters of a cost minimization framework. This analysis relied on a model framework originally developed by Joseph Newhouse (1978)[1] for the analysis of the behavior of medical cost increases under conditions where cost-sharing requirements for consumers vary. This model has the implication that the

[1] Newhouse, Joseph P. The Erosion of the Medical Marketplace, R–2141–1–HEW, The Rand Corporation, Santa Monica, California, December 1978.

supply of medical services will exhibit increasing inefficiency as the coverage of costs approaches 100 percent, resulting in higher volumes, prices, and wages than would otherwise be the case.

Therapy services provided under arrangement in SNFs represent a service that closely approximates 100 percent coverage. Medicare Part A, which accounts for 58 percent of such services, requires zero cost-sharing for the first 20 days. The daily coinsurance rate that beneficiaries must pay for days 21 through 100 for 1998 is $95.50. Medicare pays for all costs over this coinsurance rate. However, because the daily rate in a SNF is usually higher than the coinsurance rate (in 1995, the latest year for which data is available, the average daily rate in a nursing home was $127.16), beneficiaries will pay the full coinsurance amount whether they receive therapy services or not. The extra cost of therapy services is usually paid for by Medicare. Medicare Part B coverage, which begins after 100 days and accounts for 32 percent of therapy services provided in SNFs, requires a 20 percent copayment which is primarily covered by Medigap policies.[2] An additional 5 percent of services are covered by Medicaid, again with zero cost-sharing. While 5 percent of contract therapy services are covered by private insurance (and therefore may be subject to some cost-sharing), this fraction of the market is too small to introduce any significant sensitivity to price into this market.

In many cases, higher contract therapy costs result in higher relative reimbursement from Medicare for allocated overhead as well as for the direct costs of contract therapy services. This reimbursement methodology and market structure has implications for the behavior of firms that supply contract therapy services to SNFs. Cost-effective therapy firms will have little advantage in this market and will not tend to gain any substantial market share compared to the case of freely functioning market. In this situation, Newhouse argues that a competitive cost minimizing supply curve for the industry does not exist. This invalidates claims that prices, input and output quantities, and wages in this setting are at cost-minimizing rates that reflect freely functioning markets.

The Standard & Poor's DRI data produced estimates of hospital/SNF wage differentials associated with reasonable compensating wage differentials based on worker and job characteristics as well as reasonable differentials based on short-term disequilibrium associated with increases in demand, given cost-minimization by SNFs. The estimated differentials associated with characteristics of the workforce and work environment were produced by the estimation of wage equations relating the hourly wages of individual employees throughout the U.S. economy with human capital variables such as education and experience, as well as the systematic differences across occupations and industry groups that are associated with work environment. This estimation was based on regression analysis using pooled cross-sectional data from the 5 percent Public Use Microdata Samples from the 1980 and 1990 decennial census. The census sample incorporates information for therapists in all settings with information on salary, hours worked, educational attainment, demographic characteristics, and location. These data were carefully screened for potential inaccuracies associated with self-reporting and reviewed for consistency with licensure requirements and consistency with other available data sources. The estimation period ended before the implementation of OBRA '87 in 1990. This indicates that wage differentials associated with the resulting unanticipated increase in demand, and those associated with failure to minimize costs in an environment with little restraint on volume and prices, will not bias the estimated compensating wage differentials.

DRI data show that in 1989 SNFs were actually able to hire similarly qualified therapists for a slightly lower wage than could hospitals, holding skills and environment constant. While it is not possible to obtain comparable multivariate estimates based on other data sources because of the lack of available information on skill variables and other occupational groups, we note that several other sources from 1989 and surrounding years confirm that actual wage differentials for SNFs relative to hospitals were small positives or negatives. The American Speech-Language Hearing Association (ASHA) reported a negative differential for SNFs relative to hospitals in 1989, while the American Occupational Therapy Association (AOTA) reports a small positive differential for 1990 (1989 is not available). The differentials reported by ASHA and AOTA are close to those seen in the Census wage data without adjustment for skills and work environment.

Data from the 1990 decennial census indicates that, on average, physical and occupational therapists working in SNFs do have more experience than physical and occupational therapists in hospitals, possibly because some therapists in SNFs need to work more independently or with less supervision. The estimated wage differential associated with the greater degree of experience, however, was small (in both cases less than 5 percent.) The reason for the small differential appears to be that the greater degree of experience is usually past the point where additional experience results in a substantial increase in wages. Rapid increases in wages associated with experience occur during the first decade of practice with wage increases for additional years of experience adding little in the terms of wage gains. Thus, additional years of experience past this point add relatively little to the wages these therapists can demand. On the other hand, speech language pathologists in the census sample reported slightly less experience on average than those employed in hospitals.

However, since the compensating differential resulting from the Census wage equations applies to the year 1989 (1990 Census), it is important to analyze how these conditions might have changed between 1989 and 1995. The principle reason why more experienced therapists might be required in the SNF environment, according to comments, was the relative lack of supervision for these therapists, when compared to hospitals, which have larger, more established therapy departments. The key issue becomes the determination of the direction of changes in the level of supervision since the year 1989 on which our estimates are based.

Given the rapid expansion in the volume of therapy services provided in SNFs, and the larger number of therapists practicing within a given SNF, it follows that the opportunity to consult supervisory personnel has actually grown over the past 6 years. This suggests that, while a gap in the average years of work experience may exist, the size of the gap is likely to be smaller than was the case in 1989.

Comments on the unappealing work environment in SNFs focused on two areas: (1) The nature of the work, that is there is less variety in the case mix, and (2) the lack of collegiality, potential for career advancement, and training opportunities associated with smaller therapy departments in SNFs relative to hospitals.

[2] Weiner and Zeid, Comparing Current Cost with Salary Equivalency Reimbursement for Physical Therapy, Occupational Therapy, and Speech-Language Pathology, Washington DC, April 1995.

VOL 63 ISS 20 JA 30 1998 UMI

To apply these estimates to the later period, we must analyze how these conditions that contribute to the less appealing work environment would have changed between 1989 and 1995. It would appear that there would actually be more variety in case mix in 1995 than in 1989 due to the expansion of therapy services in the SNF setting and the trend towards discharging hospital patients to SNFs earlier. With the significant increases in therapy programs in SNFs, it is likely that career advancement, training opportunities, and the opportunity to work with other therapists would have grown similar to that of hospitals.

Given the changes in the SNF and hospital environments over the past 6 years, these environments are likely to have grown more similar, on average, than otherwise. It, therefore, appears unlikely that the relative appeal of the two settings would be far different than in 1989. DRI's estimates of compensating wage differentials can therefore be applied to the later period.

Comment: Several commenters stated that, by combining hospital and SNF wages, HCFA was not recognizing the full compensating wage differential for therapists in SNFs.

Response: Our salary equivalency rates cover the full compensating wage differential for therapists in SNFs (which, as explained above, is very small), and a reasonable wage differential for the estimated costs of the increased demand that would have occurred after OBRA '87, under the condition that all SNFs behaved as cost-minimizers.

The observed relative wages for therapists in SNF settings have become distorted by the lack of cost minimization efforts in the provision of therapy supply services in SNFs. Blending hospital and SNF wage rates, as we have done in the past, provides a methodology that covers compensating differentials associated with skills and work environment, while avoiding the validation of increases associated with the absence of sufficient cost minimization efforts. As hospitals and educational institutions adjusted wages upwards at a rate slower than rehabilitation therapy firms and SNFs to retain staff, access to therapy services in these settings would decrease, while the volume of services available in SNFs continued to increase beyond the point where the benefits conveyed to patients justified the costs incurred.

2. Trending Old Data To Reflect Current Conditions

Comment: HCFA should use the percent increases in physical therapy wages to update speech language pathology wages from 1989 BLS speech language pathology data to 1991 rather than using the percent changes in respiratory therapy wages.

Response: The University of Texas data source was the only source that had all four therapy types over time with relatively consistent definitions and methodology. The University of Texas data indicated that the speech language pathology wage growth from 1989 to 1991 correlated better with respiratory therapy wage growth than with physical therapy wage growth. Therefore, we used the same percentage growth for speech language pathology wages as existed for respiratory therapy wages from 1989 to 1991.

Comment: One commenter suggested that the use of 6 -and 8- year-old BLS hospital data is inappropriate and does not satisfy the Senate Finance Committee's recommendation for timely and accurate data. This commenter also suggested that trending forward does not mitigate distortions of using old data and does not capture the significant changes in the marketplace over the past several years. Other commenters stated that because the BLS data were relatively old, HCFA should give a lesser weight to the BLS data or not use these data at all.

Response: We believe that our methodology for aging the baseline BLS data is consistent with Congressional intent. We used the most recent BLS data available on therapists employed in hospitals and trended it forward using the best data sources of which we were aware. If the commenter's assertion that trending forward does not capture the significant changes in the therapy marketplace were correct, then the BLS hospital data for therapists trended forward to 1995, would be substantially different from the best industry data sources for 1995. In fact, the trended BLS data tend to be at the center of the clustered industry data sources for 1995. For physical therapists, the trended BLS mean wage was $20.90; the mean wage from all sources was $21.00, a difference of less than one percent. For occupational therapists, the trended BLS mean wage was $19.67; the mean wage from all sources was $19.73, a difference of less than one percent. For speech language pathologists, the trended BLS mean wage was $19.30; the mean wage from all sources was $18.67, a difference of 3 percent. For respiratory therapists, the trended BLS mean wage was $15.48; the mean wage from all other sources was $15.58, a difference of less than one percent. Therefore, we do not think it would be appropriate to give the BLS data a smaller weight or remove BLS from the mix of data sources.

3. Blending Hospital and SNF Data for Occupational Labor Market Wage

Comment: Many commenters believed that use of hospital data in the blend was (1) inappropriate because only SNF data should have been used; (2) irrelevant because the rule applies exclusively to nonhospital settings; (3) flawed because there are problems with the sources of hospital data that HCFA used; and (4) incorrect because of the large difference in wage levels between hospitals.

Response: Hospital wage levels by therapy type were used, in part, because hospital therapists constitute a large part of the therapist labor market. In addition, hospitals are a major source of therapists hired by SNFs and rehabilitation therapy firms that contract with SNFs to furnish therapy services. Also, the salary equivalency guidelines do apply to contracted therapy services provided in the outpatient departments of hospitals. Following traditional labor market theory for professional services, we believe that there is an occupational labor market for therapists, with compensating differentials for workers for worker characteristics and job requirements. Had we used only SNF wage data, the result would have reflected the relatively higher rates that the rehabilitation therapy firm can afford to pay to bid therapists away from other sectors that operate in a more financially constrained contract environment. With respect to commenters' assertion that hospital data are irrelevant in determining wages for therapists that work primarily in nonhospital settings, our analyses supports our position that an occupational labor market exists. We discussed these issues in more detail in Section III.B.1 the Occupational Labor Market of this final rule.

We believe that our "best estimate" approach incorporated the BLS occupational/industry data in a reasonable way with other data from less statistically reliable but more current sources. Each set of data has equal weight in developing the "best estimate" for therapist wages in hospitals and in SNFs. Each of the data sources we used is discussed more fully in section III.A, Data Sources for Salary Equivalency Guidelines of this final rule.

Comment: Many commenters challenged our blending of hospital and SNF wage levels, but offered various blending recommendations in the event that we use blending in the final rule. Many commenters agreed that the employment weights as proposed for respiratory therapy wages (99 percent hospital and 1 percent SNF) were correct. These same commenters, however, offered a wide range of alternative employment weights for use in blending hospital and SNF wages for physical and occupational therapists and speech language pathologists. Some of these commenters offered alternative employment weights which included HHAs as well as SNFs and hospitals.

Response: We believe that an occupational labor market, with compensating differentials, exists and that blending is required to achieve equitable wage levels across settings as indicated in the discussion above.

We also believe that the proposed blending method is reasonable. When we blended the wages for each type of therapy, we used hospital therapist employment and SNF therapist employment to develop the relative shares. For SNFs, we used BLS' 1993 Occupational Employment Statistics survey data, the latest and most complete employment data for SNFs available from a government source. For hospitals, we used BLS' 1995 Occupational Employment Statistics survey data, also the latest and most complete employment data for hospitals available from a government source. Some commenters preferred that employment data for both settings be for the same year. We agree. Data on a same-year basis, however, are not yet available. Based on industry discussions, we believe that, as contract therapy services to SNFs have grown, there has been a corresponding drop in the relative share of employed therapists in SNFs. Without new data to substantiate this hypothesis, we felt that the most appropriate option was to use the 1993 Occupational Employment Statistics survey for employment of therapists in SNFs, by therapy type, as we did in the proposed rule (Occupational Employment Statistics SNF data were collected for 1990 and 1993). This approach may overstate SNF employment relative to hospitals in 1995, and therefore the blended wage may also be slightly overstated.

One reason for the discrepancy between BLS Occupational Employment Statistics and commenters' suggested shares of employment in SNFs and hospitals is that commenters have included contract therapists in their employment count for SNFs and hospitals. Using employment setting (contract and employed) rather than employer to determine the share in SNFs and hospitals increases the SNF share and decreases the hospital share to use in blending. As rehabilitation therapy firms have hired therapists away from SNFs and hospitals to work as contract therapists, it is likely that the percentage of employed therapists in SNFs relative to employed therapists in hospitals has decreased. As indicated earlier, the SNF employment weights that we use may be too high.

Comment: One commenter believed the blend is invalid because SIC codes (806 for hospitals, 805 for SNFs) do not differentiate between registered therapists, therapy assistants, and therapy aides. In addition, a few commenters noted that audiologists are included in the OES survey figures for speech language pathologists.

Response: The BLS Occupational Employment Statistics survey has a separate occupational category for registered therapists. Therapy aides and assistants are in a separate category and are excluded from therapist employment numbers. Regarding the audiologist data included with speech language pathology data in the Occupational Employment Statistics survey, we believe that including audiologist data will not significantly skew the employment shares in hospitals and SNFs for speech language pathologists.

Comment: Another commenter proposed using total wages (wage bill share of costs) rather than employment shares in blending hospital and SNF wages.

Response: Using wage bill shares of costs for weights would double the weight given to wages. The wage bill share is the number of hours of service times the hourly wage for each therapy type in each setting. The wage bill approach would, in effect, use SNF and hospital wage levels twice in the calculation rather than once as is appropriate.

Comment: Several commenters were concerned that in the blending methods we used we have not shown the difference in wage levels between hospital and SNF, and that we have not proven the statistical validity of combining these two wage values (hospital and SNF) to arrive at the wage portion of the salary equivalency guidelines.

Response: In this final rule, we followed the same procedure that we used in the 1983 rebasing of the salary equivalency guidelines for physical and respiratory therapy, as published in the September 30, 1983 **Federal Register** (48 FR 44924). The industry requested a statistical analysis of our blending therapist wages by relative employment. We commissioned a complete statistical analysis of therapist wage differentials under contract with Standard & Poor's DRI. A full discussion of the results of this study appears in Section III.B.1., the Occupational Labor Market of this final rule.

4. 75th Percentile

Comment: Commenters indicated that HCFA has significantly underestimated the 75th percentile differential. Some want therapy-specific differentials applied to each therapy type and many offered alternatives to the 10 percent that HCFA used to approximate the 75th percentile differential.

Response: HCFA estimated the 75th percentile differential using several different data sources. We did not use the data sources that did not have the 75th percentile available. The 75th percentile differential in hospitals varied from 6.9 percent to 14.7 percent depending on the data source and therapy type. The 75th percentile differential in SNFs varied from 9.7 percent to 26.9 percent depending on the data source and therapy type. None of the SNF sample surveys met the sample design criterion of the Federal Government, resulting in wider variation than would otherwise be the case.

When we ran regressions on the NASL data for hospitals and SNFs with adjustments for region, ownership, and chain or individual establishment, the 75th percentile for hospitals ranged from 9 to 11 percent, depending upon therapy type, while the 75th percentile for SNFs ranged from 12 to 14 percent, again depending upon therapy type.

The 75th percentile differential varies so widely because if two samples with the same means are compared, one meeting the BLS sample design standard and the other below the BLS standard, the 75th percentile differential will tend to be smaller for the BLS-type sample than for the other sample. The alternatives offered by commenters come from samples that do not meet BLS sample design standards.

We proposed a 10-percent differential to approximate the 75th percentile for all therapy types because we believed that we had selected a reasonable estimate for the range of average 75th percentile differentials for the various therapy types. We have increased the differential from 10 percent to 12 percent to allow for factors that we may not have quantified previously. In choosing 12 percent for all therapy types, we believe that we have selected

VOL 63 ISS 20 JA 30 1998 UMI

a reasonable estimate of the 75th percentile differential.

5. Calculations

Comment: Some commenters suggested that HCFA use BLS' 1991 Employee Benefits for Medium and Large Private Establishments rather than its 1992 Small Establishments survey. As an adjunct to this comment, some commenters indicated that the number of productive hours HCFA used was too high, and that HCFA should make adjustments for breaks and lunches, family leave, jury duty, funeral leave, and military leave.

Response: The average number of employees per establishment in SIC Code 805, Nursing and Personal Care Facilities, calculated from the BLS ES–202 survey in 1995, was fewer than 100. The average number of employees per facility in the AHCA survey's sample data for 1995 was fewer than 100, despite the fact that this data source is skewed toward larger SNF chains. These figures support our decision that employee benefits for small firms should be used in determining the number of productive hours with which to adjust the hourly wage from hours paid to hours worked.

The 1994 Small Private Firms survey reports even fewer paid leave days (vacation, sick leave, and holidays) than did the 1992 survey. For 5-year employees, subtracting paid leave and 2 days for continuing education from the standard work year (2,080 hours), still brings the number of productive hours very near to our 1,808 productive hours figure.

When data from the BLS Employment Cost Index Employer Costs for Employee Compensation for March 1995 or March 1996 are used, only State and Local Government Health Services and one of its subcategories, State and Local Hospitals, have employees who work fewer productive hours than the 1,808 hours used in HCFA's hours adjustment. All other white collar, professional and technical occupations, as well as the Health Services and Service Producing industries, work more productive hours than we used in this calculation. (The calculation to reach productive hours is 2,080 hours—272 hours of paid leave = 1,808 productive hours. Paid leave days numbered 33.7 (rounded to 34 days) and multiplied by 8 hours per day to equal 272 hours of paid leave. This adjustment equals approximately 15 percent of therapist hourly wages.)

Data from both the recent BLS Employee Benefits Survey and the BLS Employer Costs for Employee Compensation Survey support our choice of number of productive hours worked per year. It is our policy to limit paid leave to vacation, sick leave, and holidays.

Comment: Many commenters believed that HCFA's estimate of the fringe benefit share of compensation is too low. Most commenters mentioned about 30–31 percent of salary for a fringe benefits share, while another mentioned 27 percent of salary for the standard fringe benefit factor. Some commenters indicated that our proposed fringe benefit share of 14 percent was too low; others asked that the ECI for fringe benefits be used to determine fringe benefit share.

Response: For our fringe benefits calculation, HCFA used Health Care Provider Cost Report Information System (HCRIS) prospective payment system hospital cost reports to determine the share of compensation other than leave that fringe benefits constitute. The amount determined was 19.5 percent of total compensation excluding leave, or about 24.2 percent of salary. Adding the fringe benefit of paid leave (15 percent of salary associated with the productive hours adjustment) to the fringe benefits determined from the cost reports results in an overall fringe benefit rate of 39.2 percent of salary. Thus, fringe benefits, including paid leave, constitute 28.2 percent of total compensation, which is similar to the shares recommended by commenters.

Comment: A few commenters stated that the allowed rental space of 250 square feet for office space was not sufficient to meet direct and indirect space requirements. These commenters suggested that greater allowance should be made for human resources management, program support, compliance, and general business support.

Response: Contract therapists work in office space outside of the rehabilitation therapy firm for which HCFA pays as part of Medicare payments to providers. We believe that the 250 square feet for each contract therapist allowed for rehabilitation therapy firm office space is more than adequate to allow for human resources management, program support, and general business support as well as space for individual therapists.

Comment: Commenters offered what they termed "technically justifiable corrections" that would have added between $5.20 and $13.38 to the proposed guidelines, depending on the therapy type. Others suggested salary equivalency guidelines somewhat closer to HCFA's proposed guideline amounts. Several commenters stated that speech language pathology guidelines should be as high or higher than those for physical therapy. The commenters pointed out that speech language pathologists have greater education requirements than do the other types of therapists for whom salary equivalency guidelines were proposed. In addition, commenters indicated that the services speech language pathologists perform merit higher guidelines than we proposed.

Other commenters indicated that if salary equivalency guidelines do not reflect accurately contract rates in the RTF industry, SNFs and other providers will be unable to obtain medically necessary services for Medicare beneficiaries. Some commenters believed that, in addition to having difficulty in procuring therapy services, SNFs may find their profit margins depressed to the point where some may close.

Commenters reported that some rehabilitation therapy firms pay therapists sign-on bonuses and offer cruises as special incentives.

Response: We carefully analyzed all the industry "technically justifiable correct" alternative levels for salary equivalency guidelines and made modifications where we believed them to be appropriate. We carefully reviewed recommended changes to employment weights, fringe benefit shares, rental space, overhead shares, and 75th percentile differentials. Modifications were made where they were justified by the data, as stated in other sections of this rule. We recognize that sign-on bonuses and other incentives such as cruises, noted by some commenters, increase the operating costs of rehabilitation therapy firms and result in higher wages than cost conscious purchasers can afford to pay. This regulation requires HCFA to set the salary equivalency guidelines at levels reasonably close to costs that providers would incur for their own employees. These bonuses and other incentives have contributed to distorting the therapist market. We do not believe that Medicare should recognize these extraordinary costs, which may not be considered to be related to patient care, as part of its salary equivalency guidelines. Finally, we believe that the therapist market, including rehabilitation therapy firms, will adjust to these new guidelines without disrupting access to care. Indeed, because of provisions in the Balanced Budget Act of 1997, the new guidelines will not be the only change controlling provider behavior.

C. One Schedule for Respiratory Therapists

We proposed to use one schedule of guidelines for respiratory therapists, in contrast to the three schedules that we issued in the September 30, 1983 notice. This decision was based on the fact that HCFA does not differentiate in covering respiratory therapists by different levels. Therefore, to make coverage conform with payment for respiratory therapy services, we proposed one schedule for respiratory therapists. Information from fiscal intermediaries and the American Association for Respiratory Care indicates that industry practice is to use only one schedule. For respiratory therapists in 1991, BLS showed two wage classes and a summary wage level. The summary level was the consistent category present for all metropolitan statistical areas (MSAs) and encompassing all nonsupervisory levels of responsibility. This final rule includes one schedule of guidelines for all therapy types.

Comment: One commenter was concerned that the American Hospital Association (AHA) and BLS data do not distinguish between wages for a Certified Respiratory Therapy Technician and a Registered Respiratory Therapist and fail to take the salary differentials of the two levels into consideration. The commenter felt this was important for two reasons. First, SNFs usually require the more experienced registered respiratory therapists. Second, with a single rate, HCFA would introduce an incentive for SNFs "to contract for the less costly, yet less experienced and less trained CRTT, rather than the more advanced registered respiratory therapist to provide respiratory care services to the medically acute SNF patient," raising questions about the delivery of appropriate quality patient care.

Response: We used the AHA and BLS data for trending purposes only and assumed that certified respiratory therapy technician and registered respiratory therapist wages rose at the same rate. This rule implements one schedule of guidelines for respiratory therapists, regardless of whether services are rendered by a certified respiratory therapy technician or a registered respiratory therapist. We developed a single respiratory therapy wage rate that includes wages for certified respiratory therapy technicians and registered respiratory therapists, weighted for the various levels in respiratory therapy. The single wage rate for the BLS data aged to 1995 was $15.48 per hour, compared to $15.58 per hour for all data sources, a difference of less than one percent.

Regarding the commenter's concern of introducing an incentive to SNFs to use "less experienced and less trained" certified respiratory therapy technicians rather than registered respiratory therapists, we believe that as long as the therapist is qualified to provide respiratory therapy services, then the provider will furnish quality care. Therefore, both a certified respiratory therapy technician or a registered respiratory therapist should be qualified to provide respiratory therapy services.

D. Geographic Adjustment Factors

1. Use of Urban Portions of the Prospective Payment System Hospital Area Wage Index for Geographic Adjustment

We proposed using the urban portion of the prospective payment system hospital area wage index to adjust the guideline amounts for local labor-related cost variations. We chose the urban portions of the prospective payment system hospital area wage index because we felt that SNFs compete in the same labor markets as hospitals, HHAs, and other health care providers. There was also precedent for using the hospital area wage index since two other long-term care Medicare benefit programs, SNF and HHA care, use it to adjust for local labor cost variation.

Comment: Several commenters stated that using the hospital area wage index to adjust the salary equivalency guidelines for geographic variation exaggerates the market variances both within and across States. The commenters suggested that the geographic wage variation in rehabilitation therapist labor markets is less than the geographic variation in hospital industry labor markets. Therefore, they concluded that using the hospital area wage index creates variations among localities that are much too large. The commenters offered suggestions that they believed would more adequately reflect the actual geographic variations in therapist wages. One of these suggestions was the Geographic Practice Cost Index (GPCI) used under the Resource-Based Relative Value Scale (RBRVS) of the Physician Fee Schedule. Other suggestions included aggregating data into State or regional rates similar to those under the existing guidelines, or creating State guideline amounts close to the national average with exceptions for markets that have extreme variations. Commenters also suggested using the hospital area wage index, but applying it to a smaller portion of the labor-related costs to reduce distortions within and across states. Another commenter suggested using the reclassified prospective payment system hospital area wage index, instead of the pre-reclassified area wage index. That would give SNFs and therapy suppliers the same advantages that prospective payment system hospitals receive since SNFs compete in the same labor markets as hospitals.

Response: As recommended by commenters, we are using the GPCI contained in the Physician Fee Schedule (62 FR 59052, October 31, 1997) instead of the hospital area wage index. We will use the Work, Practice Expense, and Malpractice GPCIs, and apply them to therapist compensation and overhead shares. Therapist compensation and overhead shares come from the therapy-specific input price indexes as developed by HCFA. There was no direct source of data on therapist malpractice cost shares. To estimate a malpractice share, we analyzed the malpractice shares from relevant rehabilitation therapy Current Procedural Terminology (CPT) codes under the Physician Fee Schedule. We determined that, on average, malpractice represents roughly 3.0 percent of total expenses for these therapy CPT codes. We used 3.0 percent for the malpractice share of the GPCI and subtracted 3.0 percentage points from the overhead share of the GPCI to avoid accounting for malpractice twice. The shares for these therapy-specific input price indexes are presented in the table below.

Therapist cost category	GPCI	Cost shares from therapy-specific input price indexes			
		Physical therapist	Occupational therapist	Speech language pathologist	Respiratory therapist
Therapist Compensation	Work	0.74	0.72	0.71	0.67
Therapist Practice Expense	Practice Expense	0.23	0.25	0.26	0.30

VOL 63 ISS 20 JA 30 1998 UMI

Therapist cost category	GPCI	Cost shares from therapy-specific input price indexes			
		Physical therapist	Occupational therapist	Speech language pathologist	Respiratory therapist
Therapist Malpractice	Malpractice	0.03	0.03	0.03	0.03
Total		1.00	1.00	1.00	1.00

The guideline amounts are calculated by the following equation:

Locality SEG amount
=
National SEG amount
×
[(Work GPCI × Therapy-Specific Compensation share)
+
(Practice Expense GPCI × Therapy-specific Overhead share)
+
(Malpractice GPCI × Therapy-specific Malpractice share)]

The GPCIs and guideline amounts for each therapy type for each GPCI locality are in Table I under section V of this final rule.

We decided to use the GPCI for several reasons. The Balanced Budget Act of 1997 mandates that many therapy services that are now reimbursed based on the salary equivalency guidelines will be shifted to the physician fee schedule, and, thus, therapist wages will be indexed by the GPCI as early as July 1, 1998. We, therefore, saw that using the GPCI was the direction for future therapy wage adjustments. We assessed the appropriateness of using the GPCI and found that, of the available indexes, the GPCI most accurately reflects the local labor costs of therapists. Using the GPCI produces a less widespread geographic distribution of guideline amounts. Also, many commenters asked us to provide statewide rates as opposed to MSA rates provided in prior salary equivalency guideline notices.

We decided to apply the GPCI to the therapist compensation share as determined by the therapy-specific input price index. We then used the practice expense GPCI to approximate the relative cost differences by geographic area of practice expenses (clerical and managerial compensation, office costs, and other costs) used to provide therapy services. In addition, we use the malpractice expense GPCI to approximate the relative cost differences by geographic area for malpractice expenses incurred in providing therapy services. The application of these GPCIs is analogous to the methods used under the Physician Fee Schedule.

As mandated by section 4541 of the Balanced Budget Act of 1997, many services presently covered under the therapy guidelines will be paid under the physician fee schedule beginning in January 1999. Since the physician fee schedule is adjusted for geographic variation by the GPCI, both the current and future payment systems will reflect similar geographic wage adjustments providing a smoother transition from the salary equivalency guidelines to the physician fee schedule.

Comment: Commenters suggested that the hospital area wage index in the proposed rule did not reflect the known geographic differences in therapist wages in different settings, specifically, hospital-employed therapists as compared to SNF-employed therapists. Many commenters suggested that until HCFA can demonstrate that the geographic variation in the wages in other settings are comparable, the use of the PPS hospital area wage index should be abandoned.

Response: We responded to the variation in wage levels among different settings in our responses to comments on the occupation labor market for therapists under section III.B. of this final rule. We have no data that indicate that the geographic adjustment needs to be done by setting if the national baseline amounts by setting are appropriately handled.

Comment: A commenter recommended that HCFA use nursing home employed therapist wage data, and that the recent revision to the SNF Medicare cost report would be useful in this regard. The commenter suggested this as a long-term option and was willing to accept modification of the hospital area wage index as a short-term solution for reducing the influence of the geographic adjuster.

Response: We have decided to use the GPCI from the physician fee schedule as the geographic adjuster. Currently, however, therapist wage data are not available on the Medicare SNF cost reports. Also, the Balanced Budget Act of 1997 provides for payment for outpatient rehabilitation services on a fee schedule basis which uses the GPCI as the wage index. Since we will only have salary equivalency guidelines for a short period of time, we have not developed a separate wage index for therapy services using nursing home employed therapist wage data.

2. Methodology for Determining Rural Rates Under Salary Equivalency

We proposed to calculate the guidelines in rural (non-urban) areas in a given State as the weighted average of the prospective payment system hospital wage index for MSAs within a State's boundaries. We proposed this method because our analyses indicated that the therapy market for rural areas tends to reflect the prevailing compensation conditions of the surrounding urban areas in the region. By weighing the urban areas in a state by the amount of hours associated with the delivery of PPS hospital care, the rural rate would reflect the larger weight given to MSAs with the most hospital hours. These urban areas with most of the hospital hours also tend to have higher wage index values.

Comment: Several commenters were concerned that rates in some rural areas may be set too low. Some commenters indicated that this would impede access to quality health care by Medicare beneficiaries because it would be difficult to recruit and retain therapists in rural areas. These commenters offered no recommendation on how to mitigate this potential problem.

Response: Since we have decided, based on industry comments and HCFA analyses, to use the work, practice expense, and malpractice GPCIs from the physician fee schedule, we analyzed rural rates using the GPCI. Unlike the hospital area wage index, the GPCI provides no distinction between rural and urban areas. Instead, certain localities have separate GPCIs based on their unique characteristics. The rest of the areas in a state use the state GPCI. The localities given separate index values are usually the larger urban areas and have been separated because they have unique labor cost characteristics. Using the GPCI essentially creates a geographic cost adjustment for the unique areas and a different geographic cost adjustment for the rest of the state. Under this methodology, a rural area would have a similar guideline amount to any other area in the state (urban and non-urban), except those areas that have unique cost markets. The 1990 Census data showed that therapist wages in rural areas were close to therapist wages in other rural and urban areas while therapist wages in the largest urban areas were distinctly higher than the national averages. Using the work GPCI produces a local labor adjustment that mirrors the actual geographic wage variations for therapists as determined from the 1990 Census data.

Because of the resulting distribution created by using the GPCI, we do not feel that rural areas will have difficulty recruiting and retaining therapists. Since only those areas that have shown unique costs would have a different guideline amount, rural areas would receive effectively the same rate as most nonrural areas in the State. Thus, there would be no incentive to diminish services in rural areas or compromise access to quality health care by Medicare beneficiaries due to relatively lower wage levels. We do not believe that a local labor cost adjustment (work GPCI) that mirrors the actual geographic wage distributions for therapists will create shortages in rural areas.

Comment: Several commenters were concerned that the guideline amounts would force SNFs in rural areas to use on-call therapists rather than contract therapists. The commenters stated that the only reason rural areas can currently attract contract therapists is that therapy companies can offer bonuses to their employees. If the rates in rural areas are set too low, contract therapy companies could not hire as many therapists and, therefore, could not provide services in rural areas. Thus, rural nursing homes would have to use on-call therapists who are less qualified than contract therapists.

Response: Since we are using the GPCI to adjust the guidelines for relative cost differences by geographic area, we believe that we have addressed the concerns of these commenters. As explained above, most areas in a State, including rural areas, are adjusted by the same GPCI. Only those areas that have shown unique characteristics would have a different adjustment factor under the GPCI. In fact, there are 33 states that have statewide rates only. We feel this methodology more accurately reflects the current labor market for therapists for two reasons: First, therapy companies can attract therapists under these guidelines because the guidelines more accurately reflect the relative costs of an hour of therapy patient-time for a given therapy type. Second, using the work GPCI to adjust the guidelines provides a more accurate reflection of the geographic distribution of therapist wages. Therefore, we see no reason for therapy companies to be unable to attract therapists nor do we see any reason for rural areas to be unable to attract contract therapists under these guidelines.

The use of on-call therapists is a decision to be made by the individual nursing home. While some commenters believed that on-call therapists were not as qualified as contract therapists, other commenters seemed to imply that on-call therapists came from the same group of therapists as contract therapists. As far as we know, there is no difference in education, training, or credentialling between the two. Commenters also alluded to rural areas using on-call therapists because that was the nature of their caseload. We do not feel that these new salary equivalency guidelines disadvantage rural areas, particularly regarding on-call therapists.

Comment: One commenter believed that HCFA's proposed methodology for computing the rural rates is incorrect because it should be based on the cost of employing labor in a rural area or weighted by other data representative of labor costs of speech language pathologists in rural areas. The commenter suggested using either rural area speech language pathology wage data, state average speech language pathology wage data, rural area hospital wage data, or state average hospital wage data. The commenter also suggested applying the prospective payment system hospital wage index to one-third of the guideline amounts instead of 83.378 percent as proposed.

Response: There are no available data or index for speech language pathology wages in rural areas or state areas that could be used to adjust the guidelines. Because there are no available geographic data on speech language pathology wages and because the hospital wage distribution does not reflect therapist wage distribution, we have decided, based on industry comments and HCFA analyses, to use the work GPCI for the therapist compensation portion of the therapy-specific input price indexes. We will also apply the practice expense GPCI to the practice expense portion and the malpractice GPCI to the malpractice expense portion. Based on our analysis of the different data surveys of therapist wages by geographic region, the work GPCI provides a close approximation of the distribution of therapist wages.

Comment: One commenter recommended that HCFA have a special adjustment for rural providers that contract for more than 40 percent of any specific therapy services.

Response: This comment implied that the adjustment should increase the guideline amounts for rural providers that contract for large amounts of therapy services because contracting for these services in rural areas is more costly. We feel that, by using the GPCI to adjust the guideline amounts for geographic variation, we have adequately determined rural rates. The guideline amounts in rural areas are consistent with the guideline amounts in nonrural areas that have not displayed unique labor costs. The distribution of rural guideline amounts as they compare with guideline amounts in other areas is consistent with the geographic distribution patterns of therapist wages shown in other surveys.

Comment: One commenter suggested that HCFA continue, as in the proposed rule, to apply a blended MSA rate as a substitute for rural calculations.

Response: We are not blending urban rates to determine rural rates in this final rule because we are not using the hospital area wage index to adjust the guideline amounts for local labor cost variations. Instead, we are using the GPCI from the physician fee schedule to adjust the guideline amounts for relative cost differences by geographic area. The work GPCI more accurately reflects the geographic distribution of therapist wages and produces a rural area amount that is consistent with nonrural areas in a state that has not shown unique cost characteristics.

3. Local Labor Market Theory

We proposed to adjust the salary equivalency guideline amounts for local labor cost variations because the labor market theory suggests that payment amounts reflect the costs of providing services in a given area. Many other Medicare payment systems such as hospital prospective payment system, SNF and HHA cost limits, and the physician fee schedule, adjust payments for geographic variation. Adjusting the guidelines for local labor cost variations is consistent with the adjustments made under these other payment systems. The only difference is that the salary equivalency guidelines are established for a single type of occupation (therapists) whereas costs in these other programs include all occupations in the industry. Because of this difference, there is no available adjustment factor that is completely accurate for therapist wage variations by geographic area. Instead, we use the adjustment index that best reflects the observed geographic distribution in therapist wages. The most appropriate adjustment index HCFA has been able to find was

VOL 63 ISS 20 JA 30 1998 UMI

the work GPCI from the physician fee schedule.

Comment: One commenter believed that it was inconsistent for HCFA to simultaneously recognize and adjust for differences in therapist wages among geographic regions while, at the same time, insisting that the much greater wage differentials among sites of employment within the same geographic region are not also worthy of adjustment.

Response: We believe that the adjustment to therapist wages for local labor cost variation is a different issue than the compensation of wage differentials among sites of employment within the same geographic area. We discuss our logic and the reasoning behind our decisions on wage differentials by employment setting in our responses to comments on the occupational labor market for therapists under Section III.B. of this final rule. We have concluded that the observed wage differentials by employment setting result from compensating differences in working conditions, skills required, short-run market disequilibrium, and different degrees of cost-minimizing behavior in different settings. The relative cost differentials by geographic area are simply variations caused by local market conditions and are not designed to replace the compensating differentials that HCFA incorporates in the guideline amounts. Relative cost differences by geographic area are captured in both the PPS hospital area wage index and the GPCI. However, for specific occupations, this differential can be smaller or larger than the average for all occupations. For therapists, we have found that local labor cost variation is smaller than the variation for all hospital occupations. The GPCIs and guideline amounts for each therapy type for each GPCI locality are in Table I under section V. of this final rule.

E. Salary Equivalency Amount Updates

In the March 28, 1997 proposed rule, we discussed the development of the Rehabilitation Therapist Input Price Index needed to update guideline levels from the base period to the implementation period (62 FR 14868). The rehabilitation therapist input price index would also be used to adjust the guidelines in future periods, using forecasts by Standard & Poor's DRI.

1. Rehabilitation Therapist Input Price Index and Related Issues

As discussed at 62 FR 14868, we proposed that the therapist input price index would be a fixed-weight, or Laspeyres-type, index. The index would be consistent with other HCFA input price indexes used to update Medicare payment rates. HCFA input price indexes are normative indexes measuring the pure price change of a fixed market basket of inputs to provide specific services. A normative index is designed to measure pure price changes under normal competitive conditions, conditions that may not exist in health care markets given the extensive presence of third-party payers. The rehabilitation therapist input price index consists of two parts for each cost category: (1) base weights that are determined from the same data sources as used to produce the guideline payment levels, and (2) price proxies that show price changes reflective of cost-minimizer market forces impacting a given cost category.

Comment: One commenter suggested that changes be made to correct the fringe benefit factor and to adjust the rental cost share to reflect what the commenter believes to be more realistic space needs. The commenter recommended using the ECI data on fringe benefits for hospital workers and increasing the rental area to 750 square feet.

Response: As explained in the section on methodology, we have modified the fringe benefits factor to include the productive hours adjustment. The productive hours adjustment had previously been added to wages rather than fringe benefits. Reclassifying the productive hours adjustment to the fringe benefits factor increases its share of total compensation to more than 28 percent. This share which we calculated using the hospital Medicare Cost Reports and the productive hours adjustment, is consistent with the ECI data on fringe benefits for hospital workers. The consistency supports our view that the hospital Medicare Cost Reports are the most accurate source of fringe benefit data since they are carefully scrutinized for use under hospital prospective payment system. Therefore, we believe that this is an accurate estimate of the fringe benefit share for the rehabilitation therapist input price index.

We also believe that the 250 square feet allowed as office space in the proposed rule is sufficient for efficient and effective therapy services as was explained in section III.B., Methodology, of this final rule. We will continue to use the cost associated with 250 square feet as the rent share in the rehabilitation therapist input price index.

Comment: One commenter recommended using internal proxies for wages and fringe benefits consistent with the hospital and SNF blend used in determining wage levels for the guideline amounts.

Response: The hospital and SNF blend uses rehabilitation therapy wage levels for physical therapy, occupational therapy, speech language pathology, and respiratory therapy to reflect occupational market wage levels for the nation. The rehabilitation therapy input price index is used to update the base wage levels for inflation and is analogous to our market baskets for prospective payment system hpsitals and HHAs. In both of these market baskets, rehabilitation therapists are included as part of professional-technical occupations with a 50/50 blend of the ECI for civilian hospital workers and the ECI for private professional-technical workers. The rehabilitation therapy input price index uses this same blend of ECIs.

Comment: One commenter proposed an alternative method of escalation which, for the time period tested, actually would project lower monthly increases than would the 96:3 forecast of the rehabilitation therapist input price index.

Response: The escalation method proposed by the commenter used a market basket that differed slightly from the one we derived. The commenter's market basket blended the ECI for nursing homes with the ECI for hospitals to create a blended internal wage proxy. Our rehabilitation therapist input price index is consistent with the 50/50 blend of ECI for hospitals and the ECI for Professional and Technical used in the hospital PPS and HHA input price indexes. We believe this methodology most closely measures relevant buyer price inflation even if it results in projected monthly increases that are higher than the alternative proposal.

Comment: One commenter suggested using the CPI plus an additional percentage, determined by HCFA, while another commenter suggested using the CPI plus 3 percent as the update factor if updates are not applied within a certain time limit.

Response: Our rehabilitation therapy input price index updates are conceptually superior for adjusting the salary equivalency guidelines because they are specific to the cost structure of rehabilitation therapy. We use weights that reflect the mixture of costs appropriate for efficiently providing contract rehabilitation therapy services. The rehabilitation therapist input price index includes proxies for wages and benefits of health sector and professional and technical workers as well as wages and benefits for administrative support and managerial personnel, office costs, and other costs. These proxies are conceptually closer to changes in the actual cost of rehabilitation therapy supply services than is a broad measure like the CPI.

HCFA has currently produced updates through the year 2000. The Balanced Budget Act of 1997 shifts most services covered by salary equivalency guidelines to SNF PPS or to the physician fee schedule well before the year 2000.

2. Timing of Rebasing Rates and Market Basket

Comment: Some commenters believed that HCFA should establish a schedule for adjusting inflation assumptions and provide that schedule in the final rule. These commenters also felt that HCFA should explain when and how rebasing would be done. Some commenters requested it be rebased at least every 3 years. One commenter recommended we update for inflation annually.

Response: The Balanced Budget Act of 1997 included some provisions that we believe will implement more effective and simpler controls over providers' costs of contracting for therapy services and that appear to make revised salary equivalency guideline regulations unnecessary in the future. The Balanced Budget Act of 1997 provided prospective payment systems for SNFs, HHAs, and Community Mental Health Centers, which ultimately will eliminate the need for salary equivalency price restraints in those venues. In addition, the Balanced Budget Act of 1997 contained various provisions which will move therapy payment from a cost basis to using the physician fee schedule for therapy provided in CORFs and outpatient rehabilitation facilities and by other providers furnishing Part B outpatient therapy service. This includes the therapy provided under Part B to nursing home patients, outpatient hospital services, and outpatient therapy services provided by an HHA to patients not under the HHA benefit. The Balanced Budget Act of 1997 also provided a $1,500 annual limitation per Medicare beneficiary where therapy services are provided under the outpatient physical therapy benefit (which includes outpatient speech language pathology services) or occupational therapy benefit. We believe that these new prospective payment systems, application of the physician fee schedules, and the $1,500 annual limitation per Medicare beneficiary, when they are implemented, will override limiting payment of contracted therapy services to the salary equivalency guidelines because they will limit payment for contracted therapy services and should offer a strong incentive for providers to control costs. Therefore, we almost certainly will not be revising the salary equivalency guidelines in the future. Until the new payment systems are implemented for the different providers, this rule provides a monthly adjustment factor for May 1998 through April 2001 (Table IV). Also, for cost reporting periods beginning on or after May 2001, the schedules would remain in effect, increased by the appropriate adjustment factor.

F. Other Technical and Policy Issues

1. Travel Allowance

Comment: Several commenters requested clarification regarding payment of the standard travel allowance. Many commenters requested that we revise the current policy, which permits only one standard travel allowance per supplier traveling to a provider site. Some commenters suggested that we should permit a standard travel allowance for each therapist traveling to the provider site. Some commenters believed that the standard travel allowance is inadequate, especially for HHAs, and another commenter believed that the standard travel allowance may discourage therapists contracting with providers in rural areas. One commenter stated that it should be noted that a salaried therapist is not subjected to a reduced compensation allowance for time spent traveling to a patient's home. Another commenter recommended an alternative of one travel allowance for each discipline or therapy type that performs services at each provider site each day.

Response: We have not found any evidence that the standard travel allowance has discouraged therapists from contracting with rural providers in rural areas. Also, our longstanding policy authorizes HHAs to receive payment under the optional travel allowance policy if they document their time spent in traveling and, if they choose, their travel mileage. We have decided to adopt the recommendation made by one commenter to provide a travel allowance for each discipline or therapy type that performs services at each provider site each day.

Comment: We asked for comments in the proposed rule on extending the optional travel allowance established for home health agencies to all providers. We received a large amount of comments requesting that we adopt this provision. In addition, one commenter stated that a salaried employee is not subjected to reduced compensation when he/she travels to a patient's home. A salaried employee who receives a set compensation is paid for all duties of his job including travel time within an 8 hour day. This is in contrast to a person who is being paid on a contractual basis.

Response: After consideration of the comments, we decided to expand the optional travel allowance. In this rule, we are permitting the optional travel allowance for all providers who furnish therapy services in areas in which geographic distance creates unique labor markets, e.g., rural areas. Under this optional travel allowance, each therapy type or discipline traveling to either the patient's home or provider site may claim this optional travel allowance. However, the provider must maintain documentation of the therapist's travel time and mileage. This optional travel allowance will help providers who are disadvantaged by one standard travel allowance per supplier. We believe that the standard travel allowance is adequate.

2. Data Sources for Future Salary Equivalency Guidelines

This topic is now obsolete because, as a result of the Balanced Budget Act of 1997 provisions, we are not publishing revised guidelines in the future.

3. Application of Guidelines

Comment: We received three comments regarding application of the guidelines in situations where compensation to a therapist employed by the provider is based (at least in part) on a fee-for-service or on a percentage of income (or commission) and that was of particular concern to the home health industry. One commenter pointed out that this issue is in litigation and should not be resolved through regulations. In addition, this commenter stated that, based on the law, HCFA could not apply salary equivalency guidelines to employees paid on a fee-for-service basis and that this proposal is only one step away from applying guidelines to the allowable costs of all therapy services whether salaried employees, hourly compensated employees, "fee-for-service" employees, or outside contractors. Another commenter felt that this proposal needs to be considered more carefully. The third commenter was in favor of this provision and felt that it was a good safety measure.

Response: We are establishing regulations that will allow that the salary equivalency guidelines to apply in situations where at least partial compensation to a therapist employed by the provider is provided on a fee-for-

VOL
63
ISS
20
JA
30
1998
UMI

service basis or on a percentage of income (or commission). The entire compensation will be subject to the guidelines in cases where the nature of the arrangements are most like an "under arrangement" situation, although the provider may technically treat the therapists as employees. The guidelines will be applied in this situation so that an employment relationship is not being used to circumvent the guidelines. Since June 1977, our longstanding policy on this issue has been contained at section 1403 of the Provider Reimbursement Manual. We are now establishing this provision in regulations that further the statutory purpose of cost control as reflected in the legislative history of the guidelines. HCFA recognizes that certain employment relationships would effectively circumvent the guidelines, has provided for these circumstances in instructions in section 1403 of the Provider Reimbursement Manual, and now provides for them in regulations at 42 CFR § 413.106(c). The guidelines will only be applied in such cases, not to all salaried employees. We do not believe that the fact that there is litigation on this issue prevents us from establishing this longstanding policy in regulations.

4. Limiting Contracted Services to 40 Hours

In the proposed rule, we had stated that, while we were evaluating the data used in developing the guideline amounts, we became aware of a tendency for contracted therapy hours in some cases to exceed 40 hours per therapist a week, the amount of hours a full-time employee would generally work (62 FR 14872). We proposed to eliminate the expense factor where the hours of therapy services per therapist exceed 40 hours.

Comment: An overwhelming amount of commenters requested that we not eliminate the expense factor for therapy hours per therapist that exceed 40 hours. Several commenters said that in rural areas, where it is hard to obtain therapists' services, the therapists must sometimes work over 40 hours.

Response: We have decided to retain the expense factor in cases where the therapist provides services to the provider exceeding 40 hours per week. We believe that this may be burdensome for the intermediaries and as stated by the commenters, there may be some providers who do appropriately utilize services in this manner.

5. Outcomes Based Systems

Comment: Several commenters stated that they used the Functional Independence Measurements in SNFs. They also stated that they wanted payment outside of the expense factor for this service which should be reimbursed based on the prudent buyer policy.

Response: Events have superseded our allowing an additional payment for outcomes-based systems. OBRA '87 required that the SNF must complete a comprehensive resident assessment which is the minimum data set. The Balanced Budget Act of 1997 also mandates, for purposes of the SNF prospective payment system, that SNFs complete the MDS for collecting information for payment under prospective payment system for therapy and other services. SNFs are and will be reimbursed for completing the minimum data set. We will not be able to permit an additional payment outside of the salary equivalency guidelines for other outcomes based systems.

6. Exception for Binding Contract

We proposed to eliminate the exception for binding contract.

Comment: Several commenters requested that we not eliminate the exception for binding contract and that it continue in the manner that it is currently provided for in the regulations. Other commenters believed that therapy contractors and nursing home providers should not be subject to rates that were not yet published at the time a contract was negotiated.

Response: We continue to believe that providers should have been prudent buyers of therapy services at the time they negotiated the contracts. Therefore, elimination of the exception for binding contract and applying the salary equivalency guidelines to these services where a binding contract is in effect should not yield a different result than what a prudent buyer should pay. Accordingly, we are eliminating the binding contract exception in § 413.106(f)(1).

7. Exceptions Process for Unique Circumstances or Special Labor Market Conditions Including Time Period for Submission of Requests

We received several comments on the substantiating requirements and the process.

Comment: One commenter asked that we establish a new exceptions process that would include specific requirements for a provider qualifying as having unique circumstances or a special labor market condition. The commenter also requested that we have specific time limits on intermediary, HCFA Regional Office, and Central Office review of the exception request. Several other commenters also made similar requests. Several commenters said that the exceptions process was adequate but recommended a deadline of 90 to 120 days from receipt of application for fiscal intermediary response.

Response: At this time, we will not be establishing a new exceptions process. The Balanced Budget Act of 1997 introduces new payment systems which, for a large portion of the providers, will override the salary equivalency guidelines in the next year. We also believe that the current exceptions process provides sufficient latitude for submission of provider documentation to support either an exception request for unique circumstances or special labor market conditions. Also, with the 60 day increase in time that the provider has to submit documentation, the providers should have enough time to provide documentation to the fiscal intermediaries. Regulations at § 413.106(f)(4) now reflect the increase from 90 to 150 days. We encourage providers to do so and, as suggested in the comments, we will require that the intermediaries process the exception requests within 180 days after receiving the exception request which is the same time frame required for SNF and HHA exception requests to routine cost limits. Because this has never been a HCFA Central Office responsibility, we do not want to make it so now, since the salary equivalency guidelines will shortly be phased out for all providers. However, we believe the 180 days will give the intermediary enough time to conduct their own review of the documentation and, if necessary, enough time to consult with the Regional Office.

Although we did not ask for comments in the proposed rule on payment for supervisory services, we received several comments on the issue of supervisory pay.

Comment: Several commenters asked that payment for these services be made at 135 percent of the hourly salary equivalency guideline amount.

Response: Because there was no evidence to substantiate these comments, we will continue to have the fiscal intermediaries pay for these services based on the intermediaries' knowledge of the differential between physical therapists', respiratory therapists', occupational therapists', and speech language pathologists' supervisors' salaries and physical therapists', respiratory therapists', occupational therapists', and speech language pathologists' salaries in similar provider settings in the area.

Comment: Several commenters asked for a definition of a supervisor and an administrator. Several commenters asked if one supervisor could supervise all types of therapy. One commenter asked if there could be a different supervisory rate per discipline.

Response: In the past, the Medicare program has not defined these terms. However, section 1412.5 of the Provider Reimbursement Manual permits an additional payment for a chief therapist and those therapists who spend at least 20 percent of their time supervising other therapists or in administrative duties. Supervising other therapists is distinguished from simply being expected, as a staff therapist, to direct trainees, aides, and assistants in performing therapy services. Administrative responsibility is the performance of those duties that normally fall within the purview of a department head or other supervisor. Because the provider department head or supervisor is not providing direct patient care, it would not be necessary for this person to hold the credentials for the particular type of department he is heading. For that reason, we are not asking intermediaries to determine different administrative/supervisory rates for each discipline.

Comment: Several commenters requested that we pay aides as a function of the hourly salary equivalency amount at 50 percent of these amounts. Some commenters suggested that aides be paid at one third of the hourly salary equivalency amount. Another commenter asked that HCFA conduct a study of the classification and compensation of rehabilitation therapy aides and establish a set of salary standards specific to respiratory therapy aides.

Response: Because the commenters did not supply any substantiating evidence in the comments to support their request for paying aides as a function of the hourly slary equivalency amount at 50 percent, we will continue our policy of having the intermediary look at a comparable position, e.g., the nurses aide in order to determine the reimbursement amount. Because there are no educational requirements for coverage of aides' services and we continue to believe that their services are comparable to nurses aides, we do not feel that it is necessary to conduct a study of the classification and compensation of therapy aides.

Although we did not request comments on payment for assistant services, we did receive several comments on this issue.

Comment: Several commenters asked that we increase payment to 85 percent of the hourly salary equivalency amounts for assistants.

Response: Because there was no evidence to substantiate the commenters' request, we will continue with payment at 75 percent of the hourly salary equivalency amount.

Comment: Several commenters were concerned that we were limiting payment for overtime.

Response: The proposed rule did not specifically introduce new limits on payment for overtime. The proposed rule states that a provider would receive payment for overtime; however, if the therapist worked over 40 hours he/she would not receive the expense factor portion of the hourly salary equivalency guideline amount. As stated previously, we are not limiting the expense factor if a therapist works over 40 hours. We are also not revising the overtime policy. Section 1412.4 of The Provider Reimbursement Manual contains our longstanding policy for overtime reimbursement.

Comment: Several commenters asked that HCFA add a provision to the regulations that recognizes a 12.5 percent shift differential for weekend and second shift services.

Response: We continue to believe that it is not customary for therapists to provide services on shifts that would not be part of a normal day-time shift. Therefore, we suggest, for those cases where a provider is paying a shift differential, that the provider apply for an exception as a unique circumstance. The fiscal intermediary will determine if the amount paid is reasonable and justifiable as a unique circumstance.

Comment: One commenter suggested that HCFA use the HHA per visit limits for the salary equivalency guideline amounts instead of the proposed rule.

Response: We cannot use the HHA per visit limits because they do not represent hourly wage rates for employees. They are visit costs which do not necessarily represent an hour's worth of service and do not represent hourly wage rates for therapists.

Comment: One commenter felt that HCFA should exempt from the salary equivalency guidelines those facilities participating in Phase I of the Multi-State Case Mix Demonstration project.

Response: In Phase I and Phase II of the Multi-State Came Mix Demonstration project, the therapy services were paid on a reasonable cost basis and therefore, payment was limited to the salary equivalency guidelines. Under Phase III, therapy services are paid on a prospective payment rate. However, the providers will have to continue to complete a Medicare cost report reflecting the salary equivalency guidelines. Ultimately, the salary equivalency guidelines will not effect the payment the providers receive because payment for therapy is on a prospective rate. As SNFs participating in the demonstration project are paid under the prospective payment system, they will no longer be paid under the demonstration project. They will be subject to prospective payment system for cost reporting periods beginning on or after July 1, 1998.

Comment: One commenter recommended that a variety of costs should be reimbursed for contract therapists working in SNFs: (1) Education, (2) training, (3) attendance at professional meetings, (4) licensing and credentialing, and (5) liability insurance.

Response: We believe that because these costs are the type of costs that an employee may incur, they are reimbursed under the hourly salary equivalency amount as part of the fringe benefit and expense factor.

Comment: Several commenters supported an exception for certain diagnostic services, such as video fluoroscopies, and recommended that such procedures be exempt from the salary equivalency guidelines.

Response: We do not believe that there should be an exception for these services. We believe that if qualified speech language pathologists are permitted to perform those services, then they are speech language pathology services that should be paid for in the same manner as other speech language pathology services. We want to point out that any special equipment that is required for these services will be reimbursed as an additional allowance to the hourly salary equivalency guideline amounts. Also, if these services take longer to perform than some other therapy services, the provider will be reimbursed for the additional hours.

Comment: One commenter suggested that HCFA study the impact that the Medicare transfer agreement requirement has on the cost of providing respiratory therapy services to SNFs. The commenter stated that the transfer agreement creates another layer of costs.

Response: Because the Balanced Budget Act of 1997 provides that, for respiratory therapy services furnished by a SNF on or after July 1, 1998, there will no longer be a requirement for SNFs to provide respiratory therapy services to SNF patients through a transfer agreement hospital, we do not believe it is necessary to perform the suggested study.

Comment: One commenter wanted HCFA to clarify which rate may be charged when a rehabilitation facility

VOL 63 ISS 20 JA 30 1998 UMI

bills for services using contracted employees in several sites that cross geographic wage index lines (*i.e.*, charge geographic rates based on central office location or site location?)

Response: We do not interfere with the provider's charging practices as long as it is consistently applied to all patients. However, the guidelines would limit provider's costs to the central office location guideline amount because the salary equivalency guidelines limit the costs of the provider who incurs the costs and does the billing. In addition, we do not have any site-of service-billing requirements for therapy services.

Comment: One commenter stated that HCFA was deficient in not developing data for HHAs, CORFs, and outpatient rehabilitation facilities.

Response: We did not have the database resources to perform the types of studies and surveys that are necessary for the salary equivalency guidelines. As pointed out in other sections of this final rule, we are unable to use the cost report as a data source for wage rates because it does not collect information on hourly wages for employees. Moreover, no outside sources submitted reliable data for these individual provider types that were consistent with the type of data described in the Senate Committee on Finance Report (S. Rept. No. 1230, 92nd cong., 2nd sess. 251 (1972)).

Comment: One commenter wanted HCFA to develop salary equivalency guidelines for HHAs, rehabilitation agencies, and CORFs using relevant data from those settings.

Response: As pointed out in the previous comment, we did not have the resources to develop this data, nor could we use the cost report for this purpose. In addition, we did not receive this type of data from outside sources. We also do not believe that the statutory language under section 1861(v)(5) of the Act requires that we develop individual salary equivalency guidelines for each provider type.

Comment: One commenter stated that HCFA should continue to include professional associations in discussions concerning future payment methodologies.

Response: Because we have no plans to publish revised salary equivalency guidelines in the future, we cannot address this issue in the context of further discussions of the salary equivalency guidelines. However, we have included, and will continue to include, professional associations in discussions of the new payment methodologies that are provided in the Balanced Budget Act of 1997.

Comment: One commenter wanted HCFA to clarify its position regarding application of the salary equivalency guidelines as Medicare providers move to prospective payment systems.

Response: The Balanced Budget Act of 1997 provided prospective payment systems for SNFs, HHAs, and community mental health centers and payment on a fee schedule basis for outpatient rehabilitation services. When providers go under these systems, the salary equivalency guidelines will no longer apply, as stated previously, because these prospective payment systems and fee schedules will limit payment for therapy services and should provide a strong incentive for providers to control costs.

Comment: One commenter suggested that in place of salary equivalency guidelines, HCFA should develop a uniform method for payment of therapy services regardless of setting.

Response: In the Balanced Budget Act of 1997, Congress enacted a uniform method for payment of therapy services regardless of setting and employee or contractor arrangements for services. This legislation provides for prospective payment systems for inpatient rehabilitation hospitals, skilled nursing facilities, home health agencies, and community mental health centers. It also provides for payment on a fee schedule basis for all outpatient rehabilitation services regardless of setting.

Comment: One commenter suggested that HCFA reimburse the contractors' costs associated with therapists' 9 month clinical training program.

Response: We can only reimburse the provider for services related to patient care. If the therapist will be providing services to Medicare patients, during the therapist's 9 month clinical trial, then we may reimburse the provider for some of those services as an aide.

Comment: One commenter stated that HCFA should pay for in-service training and utilization review services that are contracted out by the SNF.

Response: The Provider Reimbursement Manual section 1412.5, describes a therapist's professional services, as serving on utilization review and other appropriate committees and participating in training. Because this section is part of the instructions for salary equivalency guidelines which relate to contracted services, we are recognizing that a provider could contract out for these services.

Comment: One commenter stated that calculation of the guideline amount for each metropolitan statistical area for each individual provider would take some time for each individual fiscal intermediary. The commenter also suggested that funding be provided to the maintainers of the STAR programs (formerly Aetna, now Mutual of Omaha) to provide a computer program to each fiscal intermediary that would automatically calculate the therapy limitations for each provider.

Response: In the final rule, we used the GPCI as our wage index, we did not develop as many local rates as we did in the proposed rule. Therefore, it should be easier for the intermediaries to calculate the providers' guideline amounts.

Comment: One commenter stated that there are a number of outpatient rehabilitation providers who have established branch offices. Therefore, HCFA should clarify the application of the proposed guidelines for providers with branch offices.

Response: We do not have a policy which mandates that an outpatient rehabilitation provider bill for their services at the site of service. The guideline amounts have been based and will continue to be based on the central office address of the provider.

Comment: One commenter wanted to know if the guidelines are finalized during a provider's cost reporting year, will the provider be subject to two sets of limits.

Response: This has happened in previous schedules of guidelines. The intermediary will pro rate the different guideline amounts for the different parts of the cost reporting year to which they apply.

G. Statutory Issues

Comment: One commenter was concerned that the proposed rule would violate section 1861(v)(5) of the Act that says: "reasonable cost for these services may not exceed an amount equal to the salary that would reasonably have been paid for services to the person performing them * * *" for several reasons. One commenter felt that HCFA must include data from all settings, while another commenter believed that the statute requires setting-specific rates. A third commenter stated that contract therapist wages should have been included.

Response: HCFA has broad legal authority to determine reasonable cost. HCFA has implemented section 1861(v)(5) of the Act through regulations that authorize the establishment of salary equivalency guidelines. The Senate Finance Committee Report accompanying PL 92–603, section 251(c), discusses the methodology for developing the initial salary equivalency guidelines and revisions. The Senate Finance

Committee Report stated that guideline amounts should be set at the 75th percentile of the range of salaries paid in the area (by type of therapy) to full-time employee therapists. The Report specifically mentioned the use of salary data compiled by the BLS in determining the 75th percentile level of salaries in an area to the extent feasible, timely, and accurate. Thus, the committee report sets forth a detailed plan describing the measure of reasonableness (prevailing salary), the parameters (75th percentile), and the preferred data source (Bureau of Labor Statistics) which does not specify that HCFA set rates for each setting nor that we use data for each provider type. Until the publication of the proposed rule, we have always relied on the BLS hospital and nursing home wage data. Because there was some concern as to the timeliness of the 1989 and 1991 BLS hospital wage survey data which was the latest BLS survey data available, we felt that we could not use this data as our sole source for the salary equivalency guidelines. We decided to use the "best estimate" methodology combining a number of data sources.

Comment: One commenter stated that lumping together data from different provider types to determine the reimbursement of all provider types does not meet the statutory and regulatory requirements.

Response: We do not believe that the statute or regulations prohibit us from combining different provider type data for developing the salary equivalency guidelines. In fact, in 1983, where BLS had provided both hospital and nursing home wage data, we did combine the different types of provider type data. Again, the legislative history supports this approach. We believe that the word "provider" was used in the statute to include all types of entities that meet the definition of that term in the statute.

Comment: One commenter stated that it would be appropriate to include salary data from rehabilitation agencies and other providers in developing salary equivalency guidelines, as these settings represent significant segments of the occupational market for therapy services. The commenter believes that the statutory language in stating, "* * * with such provider or other organization" refers to section 1861(p) of the Act where "other organization" includes rehabilitation agencies.

Response: We did not receive nor did we have available this type of data. Moreover, as mentioned earlier, the Senate Committee on Finance Report endorsed the use of the BLS survey as the primary data source. Because the language in section 1861(p) of the Act regarding "other organizations" existed in the statute at the time the Report was written, we believe that the Report supports the use of the BLS provider data in establishing guidelines to be applied to these other organizations as well.

BILLING CODE 4120-01-C

V. Provisions of the Final Rule

In this final rule, we are revising the methodology for establishing the schedules for the maximum payment for physical therapy and respiratory therapy services. We are revising the determination of reasonable cost for physical therapy and respiratory therapy furnished under arrangements by an outside contractor by rebasing the guideline amounts.

We are also establishing salary equivalency guidelines for speech language pathology and occupational therapy services furnished under arrangements by an outside contractor using the same methodology as we are using for determining reasonable cost for physical therapy and respiratory therapy services.

In addition, we are: (1) Eliminating the exception to the salary equivalency guidelines for a provider that entered into a written binding contract with a therapist or contracting organization prior to the date the initial guidelines are published; (2) applying the salary equivalency guidelines in situations where compensation, at least in part, to a therapist employed by the provider is based on a fee-for-service or on a percentage of income (or commission).

VI. Summary of Changes in Methodology in the Final Rule

Item description	Proposed rule	Final rule
Estimate of the 75th percentile	10 percent of the mean wage used to estimate the 75th percentile.	12 percent of the mean wage used to estimate the 75th percentile. This accounts for the underlying variability that may not have been quantified in preliminary notice.
Market Basket shares for wages and fringes.	The wage share was developed based on total paid hours rather than actual worked hours. The fringe benefit cost share excluded paid hours not worked due to vacation leave, sick leave, etc.	The wage share was recalculated to include only worked hours. The fringe benefits cost share was allocated paid hours not worked due to vacation leave, sick leave, etc.
Market Basket: Office wages and benefits expense share of costs.	Source: IRS Statistics of Income—1991 cost share.	Source: IRS Statistics of Income—1994 cost share.
Market Basket: Rental space converted to hourly cost of therapy.	Source: Building and Owners' Management Association (BOMA)—1991 aged to 1995 using CPI rental.	Source: BOMA—1995.
Geographic Adjustment Factor	Pre-Reclassified urban portion of Hospital Wage Index.	Geographic Practice Cost Indexes (GPCI) used for physician fee schedule.

VII. Regulatory Impact

A. Background

We have examined the impacts of this final rule as required by Executive Order 12866, the Unfunded Mandate Reform Act, and the Regulatory Flexibility Act (RFA) (Pub. L. 96–354).

1. Executive Order 12866 and RFA

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects; distributive impacts; and equity). We have determined that this final rule is an economically significant rule under this Executive Order, as discussed in detail under section VII.B below. The RFA requires agencies to analyze options for regulatory relief for small businesses. For purposes of the RFA, States and individuals are not considered small entities. All therapists, however, are treated as small entities.

This final rule (1) revises the methodology for determining salary equivalency guidelines for physical therapy and respiratory therapy services furnished under arrangement; (2) applies the revised methodology for payment of physical therapy and respiratory therapy services to speech language pathology and occupational therapy services; and (3) establishes revised schedules of salary equivalency guidelines for physical and respiratory therapy services and initial schedules of salary equivalency guidelines for speech language pathology and occupational therapy services. These final guidelines will be used by Medicare fiscal intermediaries to determine the maximum allowable payment for therapy services furnished under arrangements.

As we indicated earlier in the preamble of this final rule, the salary equivalency guidelines for physical and respiratory therapy services furnished under arrangements were last revised in 1983, with provisions for yearly adjustments for inflation. In addition, although the law gives us explicit authority to establish salary equivalency guidelines for speech language pathology and occupational therapy services furnished under arrangements, we have never previously done so. We have, instead, paid for these services using reasonable cost methodologies. We now believe that, if we continue to use these methods to pay for speech language pathology and occupational therapy services furnished under arrangements, we will be paying for costs that are in excess of what Congress intended under section 1861(v)(5) of the Act.

We estimate that a large number of therapists, especially suppliers of rehabilitation therapy services, will be affected by these revised guidelines, and a substantial number of these entities may be required to make changes in their operations. However, we do not have sufficient available data to estimate how many of each type of entity will be affected. The analysis under section VII.B. below, in combination with the remainder of this preamble, is consistent with the standards for analysis set forth by the RFA and the Executive Order 12866.

2. Congressional Review

Section 804(2) of Title 5, United States Code (as added by section 251 of Public Law 104–121), specifies that a "major rule" is any rule that the Office of Management and Budget finds is likely to result in—

- An annual effect on the economy of $100 million or more;
- A major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or
- Significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-

VOL 63 ISS 20 JA 30 1998 UMI

based enterprises in domestic and export markets.

We estimate that the impact of this final rule will be an overall savings from fiscal years 1998 to 2000 of $260 million. Therefore, this rule is a major rule as defined in Title 5, United States Code, section 804(2).

Because this final rule is considered a major rule, and is required by law, this final rule is subject to congressional review. Therefore, this final rule is being forwarded to Congress for a 60-day review period.

3. Unfunded Mandate

The Unfunded Mandate Reform Act of 1995 also requires (in section 202) that agencies prepare an assessment of anticipated costs and benefits for any rule that may result in an annual expenditure by State, local, or tribal governments, in the aggregate, or by both the private sector, of $100 million. The final rule has no consequential effect on State, local, or tribal governments. We believe the private sector costs of this rule fall below the threshold, as well.

4. Rural Hospital Impact

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis for any final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. Such an analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside a Metropolitan Statistical Area and has fewer that 50 beds. We are not preparing a rural hospital impact statement because we have determined, and we certify, that this final rule will not have a significant economic impact on the operations of a substantial number of small rural hospitals.

B. Anticipated Effects

1. Effects on the Medicare Trust Funds

The final guidelines are based upon a provider's reasonable cost for an employee therapist furnishing therapy services. This cost includes the prevailing salary levels for therapists, prevailing market area fringe benefits, as well as a share of the other expenses that could be attributed to an employee therapist. The estimated savings to the Medicare Trust Funds result from the differences in the final guidelines relative to current rates of payment after behavioral offsets for increased add-ons, volume, intensity, mix of services, and other revenue enhancement behaviors have occurred.

We developed an estimate on the effect of the revised guidelines on the Medicare Trust Funds using all available data. We had limited data sources with which to develop hourly salary rates and other expense factors as well as to develop a projection of the effect of the revised guidelines on the Medicare Trust Funds for revised versus existing levels. We are limited because the Medicare cost reports and claims data do not furnish us with data on hourly rates paid to therapists and other relevant expense and net revenue data. Therefore, we based the hourly salary rates and the effect of the revised guidelines on the Medicare Trust Funds on the best data available to us from HCFA sources and the therapy industry. The hourly salary rates were based on a blend of hospital and SNF survey data sources. The impact analysis was based on billing data from HCFA's Decision Support Access Facility (DSAF) files and SNF cost report data from the Hospital Cost Reporting Information System file as well as industry sources.

Based upon various data sources for 1993, 1994, and 1995, we formed a baseline in order to project the volume of services in future years for each of the four therapy types. For each therapy type, we then found the difference between the current rate and the revised rate, and multiplied that difference by the projected volume in order to estimate the savings or additional outlays that this proposed rule would have.

When trend factors from the DRI/McGraw Hill third quarter 1997 forecast of the HCFA rehabilitation therapist input price index are used, we estimate the revised guidelines for April 1998 will increase the current national or aggregate guidelines per hour for physical therapy by about 35 percent and the national or aggregate guidelines for respiratory therapy by about 10 percent. At the same time, the guidelines for occupational therapy and speech language pathology will decrease estimated current aggregate rates by about 40 percent and about 25 percent, respectively.

Our projected savings per year are based on the difference between current and estimated total costs after a standard behavioral adjustment is applied for lower proposed prices relative to current payments under current payment rules.

We followed the Office of the Actuary (OACT) standard practice of allowing an offset of 35 to 50 percent for behavioral changes when we estimated the savings resulting from lowered prices. In recent years, suppliers of therapy services have bundled physical therapy, occupational therapy, and speech language pathology (but not respiratory therapy) when they have contracted to furnish therapy services to SNFs. The 35 percent behavioral offset allows for changes in behavior that generate increased revenue to the suppliers at the lower average price for the bundle of services. The behavioral offset was not applied to respiratory therapy services because revised prices are higher than current regulation prices and the respiratory therapy industry contracts separately with the SNF industry. We chose the lower end of the range because services are provided in the facility based on time in facility, not fee-for-service, thus there are substantially fewer opportunities for revenue enhancing behavior. Suppliers are estimated to compensate for about one-third of the reduction in prices by a combination of increased add-ons, volume, intensity, change in mix, and a shift in the site of service or a change in options for reimbursement. Suppliers might shift from being suppliers where payment is controlled by salary equivalency guidelines to being providers where payment is on a reasonable cost basis not subject to guidelines (unless as providers they also contract for therapy services); or they may increase the volume of services in physical therapy where guideline amounts are higher; or they may use less experienced and, therefore, lower salaried therapists. Other revenue enhancement practices may emerge which cannot be fully anticipated. Using this offset, the 3 year impact of the guidelines for 1998 through 2000 for therapy services under arrangements is estimated to be a savings of $170 million for Medicare Part A and $90 million for Medicare Part B.

Although we moved from using the hospital wage index in the proposed rule to the GPCI in the final rule, there was a negligible effect on the savings estimate in making this change. Because of the Balanced Budget Act of 1997 provisions, we revised our savings estimates from the proposed rule. These estimates are presented in the table below.

Due to the Balanced Budget Act of 1997, these guidelines become obsolete as new payment methodologies are implemented for the various providers of services. By the end of fiscal year 2000, these guidelines will have no effect, as all providers will be subject to new payment methodologies. In other words, as a result of the statutory provisions in the Balanced Budget Act of 1997, the salary equivalency guidelines will no longer be in effect by the end of fiscal year 2000.

SALARY EQUIVALENCY: SAVINGS ESTIMATES

Federal fiscal year	Estimated savings after offset (in millions, rounded)		
	Part A	Part B	Total
1998	$90	$50	$140
1999	60	40	100
2000	20	0	20
Totals	170	90	260

The savings include coinsurance and are before the Part B premium offset.
This applies the 35 percent offset to physical therapy, occupational therapy, and speech language pathology only and no offset to respiratory therapy.
Estimates are based on an effective date of April 1, 1998.

2. Effects on Providers

We expect that these salary equivalency guidelines will provide adequate payments for all classes of efficient providers. It is possible that certain inefficient therapy suppliers may be unwilling to contract with providers at the salary equivalency rates, expanding the market for more efficient therapy suppliers. We also understand that certain therapy suppliers were requiring providers to purchase a bundled package of physical therapy, occupational therapy, and speech language pathology services. By requiring this bundling of services, suppliers were able to make substantial profits because, even though there was an hourly payment limit on the physical therapy services, there were no guidelines for the speech-language pathology and occupational therapy services. Consequently, the suppliers marked up the speech-language pathology and occupational therapy services. The guidelines for speech-language pathology and occupational therapy services may eliminate suppliers profiting from excessively high prices for occupational therapy and speech language pathology. We expect that providers will continue to provide therapy services at the published rates. We expect that providers will be able to furnish the same array of beneficiary services they furnish under current guidelines amounts or payment on a reasonable cost basis.

3. Effects on Beneficiaries

We believe that the impact of these guidelines on Medicare beneficiaries will be minimal. Beneficiaries may be slightly affected by the guidelines for physical therapy, speech language pathology, and occupational therapy services. With respect to physical therapy services, the Medicare Part B coinsurance amounts associated with these services that must be paid by beneficiaries (20 percent of the provider's charges to the beneficiary) may increase if providers increase charges for those services. The charges may increase because physical therapy hourly amounts recognized by Medicare fiscal intermediaries to determine the maximum allowable cost of those services will increase in this final rule over the previous schedules of guidelines. However, the Medicare program does not dictate a provider's charge structure. We do expect charges to be reasonably related to cost. Conversely, beneficiary coinsurance will be reduced for speech language pathology and occupational therapy services because Medicare payment rates for these services will be reduced by the establishment of guidelines in this final rule and the provider's charges to the beneficiary may also decrease. Because respiratory therapy provided in comprehensive outpatient rehabilitation facilities under arrangements is a Part B service, Medicare Part B coinsurance amounts related to those services that must be paid by beneficiaries may increase if providers increase charges for those services. This may also occur because respiratory therapy hourly amounts recognized by Medicare fiscal intermediaries to determine the maximum allowable cost of those services will increase in this final rule over the previous schedules of guidelines. We believe that the guideline amounts are adequate so that therapy suppliers should continue to contract with providers to furnish services to beneficiaries. Since we are now introducing new guideline amounts for occupational therapy and speech language pathology, if providers are passing along the therapy companies higher charges, then we would expect providers' charges may be lower for those services.

4. Effects on Therapists and Therapist Companies

These salary equivalency guidelines will have varying impacts on the four categories of therapists. Speech language pathologists and occupational therapists working for contract suppliers should be minimally affected, since the suppliers typically bundle all therapy services when negotiating rates (including overhead) with providers. Physical therapists acting as suppliers or employed by supplying therapy companies may be affected positively because physical therapy hourly rates recognized by Medicare fiscal intermediaries to determine the maximum allowable cost of those services will increase in this final rule and, therefore, providers may contract with physical therapists at a higher amount. Also, providers may contract with therapy companies at a higher amount and they, in turn, may pay the therapists higher salaries. Similarly, respiratory therapists acting as therapy suppliers or employed by therapy suppliers may be positively affected because respiratory therapy hourly amounts recognized by Medicare fiscal intermediaries to determine the maximum allowable cost of those services will increase in this final rule and, therefore, providers may contract with respiratory therapy suppliers at a higher amount. Also providers may contract with therapy companies at a higher amount and they, in turn, may pay the therapists higher salaries.

We recognize that a large percentage of providers have contracts with therapy companies that may dominate a market area. We understand that because the contracted physical therapy services have been limited by the guidelines, some of these therapy companies have been requiring providers to sign up for three therapy services, that is, physical, occupational and speech language pathology services, but were overcharging providers for speech language pathology and occupational therapy services. These therapy companies may incorrectly claim that the introduction of these guidelines for contracted speech language pathology and occupational therapy services may

VOL 63 ISS 20 JA 30 1998 UMI

put them out of business. Our rates are designed to reflect adequate rates for all classes of efficient suppliers. Even though we do not pay contracted therapy companies directly, unless they also act as providers, and (with the exception of independent physical therapists and occupational therapists) contracted therapy services are one of the few Medicare services that have not been targeted in earlier deficit reduction laws.

Other changes in behavior might include a change in the type of therapy offered (perhaps substituting physical therapy for occupational therapy and increasing the volume of services furnished in physical therapy, which has a higher guideline amount), use by suppliers of less experienced (and therefore lower salaried) therapists, a shift by suppliers from furnishing therapy services under arrangements to furnishing therapy services under agreement, in which the therapy company bills Medicare directly as a provider under Part B. In the latter case, the providers are paid under Part B on a reasonable cost basis and are not subject to salary equivalency guidelines unless they contract for therapy services.

Inefficiently run rehabilitation therapy companies may cut expenses and become more efficient, as is happening in much of the rest of the economy. More efficient companies may expand or enter the market, picking up the therapy services volume which less efficient suppliers may leave unserved. Therapists' productivity could increase. Overhead is a likely candidate for expense reduction. In addition, profit margins may be reduced, but still be at or above competitive rates for efficient firms. Individual therapy suppliers may already have lower overhead than corporate suppliers. Multi-therapy companies may adjust their service mix away from therapy types for which they are inefficient producers and expand the therapy types for which they are efficient producers.

Due to these salary equivalency guidelines, some therapists who work for inefficient rehabilitation therapy suppliers may have compensation levels above competitive rates and may find that their yearly salary and fringe benefit increases lag those of therapists employed in other more competitive settings of the local therapist labor market. A deceleration in wage increases for workers with excessively high compensation levels will continue until wages in various settings, after compensating non-wage differences, are roughly comparable for each therapy type. Those therapists whose employers curtail furnishing services under arrangements with providers may either furnish therapy for those same employers as employees of rehabilitation agencies that will bill Medicare directly as providers, change employers to those efficiently run companies that expand their contracted therapy services, or become self-employed and contract directly with providers to furnish therapy services under arrangements. Therapists who are employed by efficient rehabilitation therapy suppliers where salaries are in line with those of other therapists (after adjustments for compensating non-wage differentials) in the local labor market should notice no substantial effect. The expected effects described above result in a better functioning, more efficient health care system.

C. Alternatives Considered

Section 1861(v)(5) of the Act requires HCFA to determine the reasonable cost of services furnished to Medicare beneficiaries "under an arrangement" with a provider of services by therapists or other health-related personnel. Other alternatives to implementing the salary equivalency program are to continue paying for therapy services, furnished under arrangements, using current reasonable cost methodologies or to use alternative data sources to establish the salary equivalency guidelines in this final rule.

We rejected the first alternative because, if we continue to pay for speech language pathology and occupational therapy services furnished under arrangements using reasonable cost methodologies, we will be paying for costs that are in excess of what Congress intended under section 1861(v)(5) of the Act, to the detriment of the Medicare Trust Funds. In the case of physical therapy and respiratory therapy services, current salary equivalency guidelines may reflect less than a provider's reasonable costs in furnishing these services.

As we indicated in our discussion of data sources we used to establish the guidelines (see section III.B. of this final rule), we were unable to find a sole or primary source of data on hourly rates paid to therapists by providers that is timely and statistically valid. Because the BLS hospital wage industry surveys were not timely, we were unable to use that data as our sole source as in prior guideline notices. The rehabilitation therapy industry submitted survey data to HCFA that they believe support higher guideline amounts than are in the final rule. Although the survey data were submitted to HCFA in order to determine new guideline amounts as provided in § 413.106(b)(6), it did not meet the requirements in the final rule. Nevertheless, we evaluated the data. As indicated in Section II.A. of this preamble, we decided to blend select hospital and SNF data sources so that the wages and salary parts of this final rule have been determined using a "best estimate" approach, giving equal weight, but not preferential status to each data source. We decided on the "best estimate" approach because we were unable to find a sole or primary source that met our criteria of reliability, validity, and representativeness.

D. Conclusion

Federal Medicare expenditures have grown at an extraordinary rate in recent years. A study commissioned by the National Association for Support of Long-Term Care indicates that 75 percent of all therapy services under arrangements were furnished in SNFs. We also project that the 65 and over population will nearly double by the year 2025. We believe that the salary equivalency guidelines in this final rule are in the public interest since they balance the needs of Medicare program beneficiaries, taxpayers, providers of therapy services, and suppliers who furnish therapy services under arrangements.

In accordance with the provisions of Executive Order 12866, this final rule was reviewed by the Office of Management and Budget.

VIII. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA), agencies are required to provide a 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- Whether the information collection is necessary and useful to carry out the proper functions of the agency;
- The accuracy of the agency's estimate of the information collection burden;
- The quality, utility, and clarity of the information to be collected; and
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

However, the information collection requirements referenced in this rule as outlined in §§ 413.106(e) and 413.106(f) are currently approved under the PRA: In particular, these requirements are currently captured in each of HCFA's provider cost report information collections.

Section 413.106(e) requires a provider of therapy services to supply its intermediary with documentation that supports additional costs incurred for services furnished by an outside supplier.

Section 413.106(f) requires that before an exception to the application of the guidelines may be granted, the provider must submit appropriate evidence, in accordance with instructions issued in section 1414 of the Provider Reimbursement Manual, to its intermediary to substantiate its claim.

Organizations and individuals desiring to submit comments on any of these information collection and recordkeeping requirements, should direct them directly to the following:

Office of Management and Budget, Office of Information and Regulatory Affairs, Room 10235, New Executive Office Building, Washington, DC 20503, ATTN.: Allison Herron Eydt, HCFA Desk Officer

List of Subjects in 42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR part 413 is amended as set forth below:

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT FOR SKILLED NURSING FACILITIES

1. The authority citation for part 413 continues to read as follows:

Authority: Secs. 1102, 1861(v)(1)(A), and 1871 of the Social Security Act (42 U.S.C. 1302, 1395x(v)(1)(A), and 1395hh).

2. Section 413.106(c)(5) is redesignated as (c)(6) and republished, a new paragraph (c)(5) is added, paragraph (f)(1) is removed and paragraphs (f)(2), (3), and (4) are redesignated as (f)(1), (2), and (3) and republished to read as follows:

§ 413.106 Reasonable cost of physical and other therapy services furnished under arrangements.

* * * * *

(c) *Application.* * * *

(5) If therapy services are performed in situations where compensation to a therapist employed by the provider is based, at least in part, on a fee-for-service or on a percentage of income (or commission), the guidelines will apply. The entire compensation will be subject to the guidelines in cases where the nature of the arrangements is most like an under "arrangement" situation, although technically the provider may treat the therapists as employees. The intent of this section is to prevent an employment relationship from being used to circumvent the guidelines.

(6) These provisions are applicable to individual therapy services or disciplines by means of separate guidelines by geographical area and apply to costs incurred after issuance of the guidelines but no earlier than the beginning of the provider's cost reporting period described in paragraph (a) of this section. Until a guideline is issued for a specific therapy or discipline, costs are evaluated so that such costs do not exceed what a prudent and cost-conscious buyer would pay for the given service.

* * * * *

(f) *Exceptions:* The following exceptions may be granted but only upon the provider's demonstration that the conditions indicated are present:

(1) *Exception because of unique circumstances or special labor market conditions.* An exception may be granted under this section by the intermediary if a provider demonstrates that the costs for therapy services established by the guideline amounts are inappropriate to a particular provider because of some unique circumstances or special labor market conditions in the area. The provider's request for an exception, together with substantiating documentation, must be submitted to the intermediary each year, no later than 150 days after the close of the provider's cost reporting period. If the circumstances giving rise to the exception remain unchanged from a prior cost reporting period, however, the provider need only submit evidence of the intermediary 150 days after the close of its cost reporting period to establish that fact.

(2) *Exception for services furnished by risk-basis HMO providers.* For special rules concerning services furnished to an HMO's enrollees who are Medicare beneficiaries by a provider owned or operated by a risk-basis HMO (see § 417.201(b) of this chapter) or related to a risk-basis HMO by common ownership or control (see § 417.205(c) of this chapter).

(3) *Exception for inpatient hospital services.* Effective with cost reporting periods beginning on or after October 1, 1983, the costs of therapy services furnished under arrangements to a hospital inpatient are excepted from the guidelines issued under this section if such costs are subject to the provisions of § 413.40 or part 412 of this chapter. The intermediary will grant the exception without request from the provider.

Copyright Restoration of Works in Accordance With the Uruguay Round Agreements Act; Notice

VOL 63 ISS 20 JA 30 1998 UMI

LIBRARY OF CONGRESS

Copyright Office

[Docket No. 97–3C]

Copyright Restoration of Works In Accordance With the Uruguay Round Agreements Act; List Identifying Copyrights Restored Under the Uruguay Round Agreements Act for Which Notices of Intent to Enforce Restored Copyrights Were Filed in the Copyright Office

AGENCY: Copyright Office, Library of Congress.

ACTION: Publication of Seventh List of Notices of Intent to Enforce Copyrights Restored Under the Uruguay Round Agreements Act.

SUMMARY: The Copyright Office is publishing its seventh list of restored copyrights for which it has received and processed Notices of Intent to Enforce a copyright restored under the Uruguay Round Agreements Act. Publication of the lists creates a record for the public to identify copyright owners and works whose copyright has been restored for which Notices of Intent to Enforce have been filed with the Copyright Office. This list includes NIEs filed by copyright owners whose eligibility to file in the Office expired December 31, 1997. Copyright Office processing continues for the remainder of NIEs received on or before December 31, 1997.

EFFECTIVE DATE: January 30, 1998.

FOR FURTHER INFORMATION CONTACT: Marilyn J. Kretsinger, Assistant General Counsel, or Charlotte Douglass, Principal Legal Advisor to the General Counsel, Copyright GC/I&R, Post Office Box 70400, Southwest Station, Washington, D.C. 20024. Telephone: (202) 707–8380. Telefax: (202) 707–8366.

SUPPLEMENTARY INFORMATION:

I. Background

The Uruguay Round General Agreement on Tariffs and Trade and the Uruguay Round Agreements Act (URAA) (Public Law No. 103–465; 108 Stat. 4809 (1994)) provide for the restoration of copyright in certain works that were in the public domain in the United States. Under section 104A of title 17 [1] of the United States Code as provided by the URAA, copyright protection was restored on January 1, 1996, in certain works by foreign nationals or domiciliaries of World Trade Organization (WTO) or Berne countries that were not protected under the copyright law for the reasons listed below in (2). Specifically, for restoration of copyright, a work must be an original work of authorship that:

(1) is not in the public domain in its source country through expiration of term of protection;

(2) is in the public domain in the United States due to:

(i) noncompliance with formalities imposed at any time by United States copyright law, including failure of renewal, publishing the work without a proper notice, or failure to comply with any manufacturing requirements;

(ii) lack of subject matter protection in the case of sound recordings fixed before February 15, 1972; or

(iii) lack of national eligibility (e.g., the work is from a country with which the United States did not have copyright relations at the time of the work's publication); and

(3) has at least one author (or in the case of sound recordings, rightholder) who was, at the time the work was created, a national or domiciliary of an eligible country. If the work was published, it must have been first published in an eligible country and not published in the United States within 30 days of first publication. *See* 17 U.S.C. 104A(h)(6).

A work meeting these requirements is protected "for the remainder of the term of copyright that the work would have otherwise been granted in the United States if the work never entered the public domain in the United States." 17 U.S.C. 104A(a)(1)(B).

Under the URAA, copyright in restored works vests automatically on the date of restoration. 17 U.S.C. 104A(a)(1)(A). That date is January 1, 1996, if the particular nation was already a member of the World Trade Organization (WTO) or the Berne Convention. Otherwise, the effective date of restoration is the date of a particular nation's adherence to the WTO or the Berne Convention or the date when the President issues a proclamation extending copyright restoration to that nation.

Although the copyright owner may immediately enforce the restored copyright against individuals who infringe his or her rights on or after the effective date of restoration, the copyright owner's right to enforce the restored copyright is delayed against reliance parties. Typically, a reliance party is one who was already using the work before December 8, 1994, the date the URAA was enacted. *See* 17 U.S.C. 104A(h)(4). Before a copyright owner can enforce a restored copyright against a reliance party, the copyright owner must file a Notice of Intent (NIE) with the Copyright Office or serve an NIE on such a party.

An NIE may be filed in the Copyright Office within 24 months of the date of restoration of copyright. Alternatively, an owner may serve an NIE on an individual reliance party at any time during the term of copyright; however, such notices are effective only against the party served and those who have actual knowledge of the notice and its contents. NIEs appropriately filed with the Copyright Office and published herein serve as constructive notice to all reliance parties.

II. Administrative Processing

Pursuant to the URAA, the Office is publishing its seventh four-month list identifying restored works for notices of intent to enforce a restored copyright filed with the Office. 17 U.S.C. 104A(e)(1)(B). The earlier lists were published between May 1, 1996, and December 19, 1997. 61 FR 19372 (May 1, 1996), 61 FR 46134 (Aug. 30, 1996), 61 FR 68454 (Dec. 27, 1996), 62 FR 20211 (April 25, 1997), 62 FR 44842 (Aug. 22, 1997), and 62 FR 66766 (Dec. 19, 1997). To allow for processing this NIE information, the Office closed the record for publication approximately three working days before forwarding this record for publication. Accordingly, the NIEs listed herein are those entered into the public records of the Office between December 5, 1997, and January 21, 1998. NIEs not processed by January 21, 1998, will appear on the eighth four-month list, to be published on April 17, 1998.

NIEs for works restored to copyright on January 1, 1996, must have been postmarked on or before December 31, 1997, to be accepted in the Copyright Office for publication in the **Federal Register**. *See* 17 U.S.C. 104A(d)(2). NIEs that were received in the Office too late for **Federal Register** publication will be returned to the remitter unrecorded, and the fee will be refunded. On the other hand, owners of works that are still within their eligible filing period may continue to file such notices with the Copyright Office and receive constructive notice, and the Office will continue to publish a list of eligible NIEs in the **Federal Register**.

III. Correction of Previously Filed NIEs

Correction NIEs for major errors (essentially, major errors in title and owner information) on any NIE filed must be submitted within the eligibility period. 37 CFR 201.34 (d)(6)(i). Minor errors may be corrected at any time without regard to eligibility for filing, pursuant to the interim regulation on Correction NIEs, published at 62 FR 55736 (Oct. 28, 1997).

IV. On-line Availability of NIE Lists

Using the information provided herein, one may search the Office's database to obtain additional information about a particular NIE. NIEs are located in what is known as the Copyright Office History Documents (COHD) file, which is available from computer terminals located in the Copyright Office itself or from terminals located in other parts of the Library of Congress through the Library of Congress Information System (LOCIS). Alternative ways to connect through Internet are: (i) The World Wide Web (WWW), using the Copyright Office Home Page at: http://www.loc.gov/copyright; or (ii) connecf directly to LOCIS through the telnet address at locis.loc.gov. WWW is available 24 hours a day. LOCIS is available 24 hours a day Monday through Friday, U.S. Eastern Time; Saturday until 5 p.m.; and Sunday after 11 a.m.[2]

Information available online includes: the title or brief description if untitled; an English translation of the title; the alternative titles if any; the name of the copyright owner or owner of one or more exclusive rights, the date of receipt of the NIE in the Copyright Office; the date of publication in the **Federal Register**; and the address, telephone and telefax number of the copyright owner. If given on the NIE, the online information will also include the author, the type of work, and the rights covered by the notice. *See* 37 CFR 201.33(f). For the purpose of researching the full Office record of NIEs on the Internet, the Office has made online searching instructions accessible through the Copyright Office Home Page. Researchers can access them through the Library of Congress Home Page on the World Wide Web by selecting the copyright link. Select the menu item "Copyright Office Records" and/or "URAA, GATT Amends U.S. law." In addition to online records, images of the complete NIEs as filed are on optical disc and available from the Copyright Office.

V. Seventh List of Notices of Intent to Enforce

The following restored works are listed alphabetically by copyright owner; multiple works owned by a particular copyright owner are listed alphabetically by title. Works having more than one copyright proprietor are listed under the first owner and cross-referenced to the succeeding owner(s). A cross-reference to the composite owner (e.g., Title I owned by "A B & C") will state, "SEE A B & C" at the listing for each individual owner (e.g., for Owner A, for Owner B and for Owner C).

[BOP–1074–F]

RIN 1120–AA70

Institutional Management; Editorial Amendments

AGENCY: Bureau of Prisons, Justice.

ACTION: Final rule.

SUMMARY: In this document, the Bureau of Prisons is amending its regulations relating to institutional management to update an organizational reference, to make a stylistic correction, and to adjust codification. There is no change in the intent of any of the amended regulations.

EFFECTIVE DATE: January 30, 1998.

ADDRESSES: Rules Unit, Office of General Counsel, Bureau of Prisons, HOLC Room 754, 320 First Street, NW., Washington, DC 20534.

FOR FURTHER INFORMATION CONTACT: Roy Nanovic, Rules Unit, Office of General Counsel, Bureau of Prisons, phone (202) 514–6655.

SUPPLEMENTARY INFORMATION: The Bureau of Prisons is amending its regulations on marriage of inmates (28 CFR part 551, subpart B). A final rule on this subject was published in the **Federal Register** on April 30, 1984 (49 FR 18385) and was amended on October 29, 1993 (58 FR 58248). When first promulgated, § 551.10 consisted of two undesignated paragraphs. In conformance with Office of Federal Register recommendations, these two undesignated paragraphs are being combined into one paragraph. More specifically, the two sentences of the second undesignated paragraph are being designated as the second and third sentences of the remaining paragraph.

The Bureau is also making two editorial amendments to its procedures for handling HIV-positive inmates who pose a danger to others (28 CFR part 541, subpart E). A final rule on this subject was published on March 17, 1989 (54 FR 11323) and was amended on April 27, 1989 (54 FR 18198) and on July 10, 1991 (56 FR 31530). These regulations are being amended to update the references to the organization and procedures of the Administrative Remedy Program in §§ 541.65(c) and 541.67(e) and to use the singular rather than the plural form of a noun in § 541.63(a).

Because these amendments are editorial in nature, the Bureau finds good cause for exempting the provisions of the Administrative Procedure Act (5 U.S.C. 553) requiring notice of proposed rulemaking, the opportunity for public comment, and delay in effective date. Members of the public may submit comments concerning this rule by writing to the previously cited address. These comments will be considered but will receive no response in the **Federal Register**.

The Bureau of Prisons has determined that this rule is not a significant regulatory action for the purpose of E.O. 12866, and accordingly this rule was not reviewed by the Office of Management and Budget. After review of the law and regulations, the Director, Bureau of Prisons has certified that this rule, for the purpose of the Regulatory Flexibility Act (5 U.S.C. 601 et seq.), does not have a significant economic impact on a substantial number of small entities, within the meaning of the Act. Because this rule pertains to the correctional management of offenders committed to the custody of the Attorney General or the Director of the Bureau of Prisons, its economic impact is limited to the Bureau's appropriated funds.

List of Subjects

28 CFR Part 541

Prisoners.

28 CFR Part 551

Prisoners.

Kathleen M. Hawk,

Director, Bureau of Prisons.

Accordingly, pursuant to the rulemaking authority vested in the Attorney General in 5 U.S.C. 552(a) and delegated to the Director, Bureau of Prisons in 28 CFR 0.96(p), parts 541 and 551 in subchapter C of 28 CFR, chapter V are amended as set forth below.

SUBCHAPTER C—INSTITUTIONAL MANAGEMENT

PART 541—INMATE DISCIPLINE AND SPECIAL HOUSING UNITS

1. The authority citation for 28 CFR part 541 continues to read as follows:

Authority: 5 U.S.C. 301; 18 U.S.C. 3621, 3622, 3624, 4001, 4042, 4081, 4082 (Repealed in part as to offenses committed on or after November 1, 1987), 4161–4166 (Repealed as to offenses committed on or after November 1, 1987), 5006–5024 (Repealed October 12, 1984 as to offenses committed after that date), 5039; 28 U.S.C. 509, 510; 28 CFR 0.95–0.99.

§ 541.63 [Amended]

2. In § 541.63(a), the word "recommendations" in the second sentence is revised as "recommendation".

3. In § 541.65, paragraph (c) is revised to read as follows:

§ 541.65 Regional Director review and appeal.

* * * * *

(c) An inmate may appeal a decision of the Regional Director, through the Administrative Remedy Program, directly to the National Inmate Appeals Administrator, Office of General Counsel, within 30 calendar days of the Regional Director's decision (see 28 CFR 542.15).

4. In § 541.67, paragraph (e) is revised to read as follows:

§ 541.67 Review of controlled housing status.

* * * * *

(e) An inmate may appeal a decision of the Regional Director, through the Administrative Remedy Program, directly to the National Inmate Appeals Administrator, Office of General Counsel, within 30 calendar days of the Regional Director's decision (see 28 CFR 542.15).

PART 551—MISCELLANEOUS

4. The authority citation for 28 CFR part 551 continues to read as follows:

Authority: 5 U.S.C. 301; 18 U.S.C. 1512, 3621, 3622, 3624, 4001, 4005, 4042, 4081, 4082 (Repealed in part as to offenses committed on or after November 1, 1987), 4161–4166 (Repealed as to offenses committed on or after November 1, 1987), 5006–5024 (Repealed October 12, 1984 as to offenses committed after that date), 5039; 28 U.S.C. 509, 510; Pub. L. 99–500 (sec. 209); 28 CFR 0.95–0.99; Attorney General's August 6, 1991 Guidelines for Victim and Witness Assistance.

§ 551.10 [Amended]

5. In § 551.10, designate the text of the undesignated second paragraph as the second and third sentences of the first paragraph.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–4289–N–01]

Office of the Assistant Secretary for Community Planning and Development; Funding for Fiscal Year 1997: Capacity Building for Community Development and Affordable Housing

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice of funding for fiscal year 1997.

SUMMARY: A recently enacted appropriation transfers $30.2 million in Fiscal Year 1997 funds to section 4 of the HUD Demonstration Act of 1993 and amends it to provide this assistance through The Enterprise Foundation, the Local Initiatives Support Corporation (LISC), Habitat for Humanity, and Youthbuild, USA. The funds are to be used for capacity building for community development and affordable housing—provided that at least $10,000,000 of the funding is used in rural areas, including tribal areas—as required by section 4 of the 1993 Act.

Section 4 authorizes the Secretary to establish by notice such requirements as may be necessary to carry out its provisions. This notice, which takes effect upon issuance, indicates that HUD will equally divide the $30.2 million appropriated for this capacity building initiative among the four organizations cited above. Each organization will match the HUD assistance provided with resources from private sources in an amount equal to three times its share, as required by section 4 of the 1993 Act. Each organization will use at least $2.5 million of its $7.55 million share for activities in rural areas, including tribal areas.

This notice also provides details regarding administrative and other requirements which shall apply to this program.

FOR FURTHER INFORMATION CONTACT: Phyllis Amon, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7216, Washington DC 20410. Telephone Number (202) 708–3176 Ext. 4380, TTY Number: (202) 708–2565. (These are not toll-free numbers.)

SUPPLEMENTARY INFORMATION:

1. Authority

The 1997 Emergency Supplemental Appropriations Act for Recovery from Natural Disasters, and for Overseas Peacekeeping Efforts, including Those in Bosnia, Pub.L. 105–18, 111 Stat. 198 and 201, June 12, 1997, (1997 Emergency Supplemental Appropriations Act) transfers $30.2 million from the Homeownership and Opportunity for People Everywhere (HOPE) program account to section 4 of the HUD Demonstration Act of 1993, 41 U.S.C. 9816 note, (1993 Act) and amends it to provide this assistance through Enterprise, LISC, Habitat for Humanity; and Youthbuild "to develop the capacity and ability of community development corporations and community housing development organizations to undertake community development and affordable housing projects and programs."

2. Background

In Fiscal Year 1994, HUD provided $20 million to Enterprise and LISC through The National Community Development Initiative (NCDI) as authorized by section 4 of the HUD Demonstration Act of 1993. An additional $10 million for NCDI was authorized by section 12(b)(3) of the Housing Opportunity Program Extension Act of 1996, Pub. L. 104–120, 110 Stat. 845, March 28, 1996. In accordance with these statutes, HUD divided both appropriations equally between Enterprise and LISC. HUD published a notice on March 30, 1994, at 59 FR 14988, which sets forth the requirements for these funds.

Today's notice contains requirements for the newly authorized $30.2 million. These funds, however, may be allocated by Enterprise and LISC to continue NCDI activities which received funding under the notice dated March 30, 1994 and grant agreements pursuant to it. Those activities will continue to be governed by the requirements of the **Federal Register** funding notice dated March 30, 1994.

Today's notice does not apply to the $30 million in funds previously made available for NCDI under section 4 of the HUD Demonstration Act of 1993 or any additional HUD funds allocated by Enterprise and LISC for NCDI activities. The use of such funds will continue to be governed by the requirements of the March 30, 1994, **Federal Register** funding notice.

3. Allocation and Form of Awards

The 1997 Emergency Supplemental Appropriations Act provides $30.2 million for Section 4 activities. In accordance with congressional intent, Enterprise, LISC, Habitat for Humanity, and Youthbuild will each be awarded 7.55 million. The accompanying Conference Report stated in part:

> The language makes a technical change to include certain participating intermediary organizations * * *. It is the intent of the conferees that funds available shall be equally divided among participating intermediary organizations. (H.R. Conf. Rep. No. 105–119, 105th Cong., 1st Sess. 115 (1997))

Each organization will use $2.5 million of its share for activities in rural areas, including tribal areas.

4. Eligible Activities

Eligible activities under this award include:

(a) Training, education, support, and advice to enhance the technical and administrative capabilities of community development corporations (CDCs) and community housing development organizations (CHDOs);

(b) Loans, grants, development assistance, predevelopment assistance, or other financial assistance to CDCs/CHDOs to carry out community development and affordable housing activities that benefit low-income families and persons, including the acquisition, construction, or rehabilitation of housing for low-income families and persons, and community and economic development activities which create jobs for low-income persons; and

(c) Such other activities as may be determined by Enterprise, LISC, Habitat for Humanity, and Youthbuild in consultation with the Secretary or his designee.

5. Matching Requirements

As required by section 4 of the 1993 Act, this $30.2 million appropriation is subject to each award dollar being matched by three dollars in cash or in-kind contributions to be obtained from private sources. Each of the organizations receiving these funds will document its proportionate share of matching resources, including resources committed directly or by a third party to a grantee or subgrantee after June 12, 1997 to conduct activities in approved work plans.

In-kind contributions shall conform to the requirements of 24 CFR 84.23.

6. Administrative and Other Requirements

The award will be governed by 24 CFR part 84 (Uniform Administrative Requirements), A–122 (Cost Principles for Nonprofit Organizations), and A–133 (Audits of Institutions of Higher Education and other Nonprofit Institutions) as implemented at 24 CFR part 45.

Other requirements will be detailed in the terms and conditions of the grant agreement provided to grantees, including the following:

(a) Each grantee will submit to HUD a specific work and funding plan for each community showing when and how the federal funds and non-federal matching resources will be used. The work plan must be sufficiently detailed for monitoring purposes and must identify the performance goals and objectives to be achieved. Within 30 days after submission of a specific work plan, HUD will approve the work plan or notify the grantee of matters which need to be addressed prior to approval, or the work plan shall be construed to be approved. Work plans may be developed for less than the full dollar amount and term of the award, but no HUD-funded costs may be incurred for any activity until the work plan is approved by HUD. All activities are also subject to the environmental requirements in paragraph 6.(f) of this notice.

(b) The grantees shall submit to HUD an annual performance report due 90 days after the end of each calendar year, with the first report due on March 31, 1999. Performance reports shall include reports on both performance and financial progress under work plans including reports on the commitment and expenditure of private matching resources utilized through the end of the reporting period. Reports shall conform to the reporting requirements of 24 CFR part 84. Additional information or increased frequency of reporting, not to exceed twice a year, may be required by HUD any time during the grant agreement if HUD finds such reporting to be necessary for monitoring purposes.

To further the consultation process and share the results of progress to date, the Secretary may require grantees to present and discuss their performance reports at annual meetings in Washington, DC during the life of the award.

(c) The performance reports must contain the information required under 24 CFR part 84, including a comparison of actual accomplishments with the objectives and performance goals of the work plans. In the work plans each grantee will identify performance goals and objectives established for each community in which it proposes to work and appropriate measurements under the work plan such as: the number of housing units and facilities each CDC/CHDO produces annually during the grant period and the average cost of these units. Provided, however, that when the activity described in a work plan is not to be undertaken in a single community that a report indicating the areas in which the activity will be undertaken, along with appropriate goals and objectives, will be provided when that information is available. The performance reports will also include a discussion of the reasonableness of the unit costs; the reasons for slippage if established objectives and goals are not met; and additional pertinent information.

(d) A final performance report, in the form described in paragraph (c) above, shall be provided to HUD by each grantee within 90 days after the completion date of the award.

(e) Financial status reports (SF–269A) shall be submitted semiannually.

(f) Environmental review. Individual projects to be funded by these grants may not be known at the time the overall grants are awarded and also may not be known when some of the individual subgrants are made. Therefore, in accordance with 24 CFR 50.3(h), the application and the grant agreement must provide that no commitment or expenditure of HUD or local funds to a HUD-assisted project may be made until HUD has completed an environmental review to the extent required under applicable regulations and has given notification of its approval in accordance with 24 CFR 50.3(h).

8. Application Content

Grantees will be required to file an application containing the following:

(a) Application for Federal Assistance (OMB Standard Form 424), Non-construction Assurances (SF–424B), Certification Regarding Drug-Free Workplace Requirements, Certification Regarding Lobbying and the Fair Housing and Equal Opportunity certification described in section 9(f) of this notice;

(b) A Summary Budget for the amount of funds being requested as described in section VI (10) of the "NOFA for Consolidated Technical Assistance for Community Planning and Development (CPD) Programs; Notice," published at 59 FR 33842, 33848, on June 30, 1994 and specifying any amounts to be committed to NCDI activities under the notice dated March 30, 1994 and grant agreements pursuant to it.

9. Other Matters

(a) *Environmental Impact.* A Finding of No Significant Impact with respect to the environment has been made in accordance with the Department's regulations at 24 CFR part 50, which implements section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332). The Finding of No Significant Impact is available for public inspection between 7:30 a.m. and 5:30 p.m. weekdays at the Office of the Rules Docket Clerk, Room 10276, Department of Housing and Urban Development, 451 Seventh Street, SW, Washington, DC 20410.

(b) *Wage Rates.* Unless triggered by other Federal funds for a project under this grant, the requirements of the Davis-Bacon Act do not apply.

(c) *Relocation.* The Uniform Relocation Act applies to anyone who is displaced as a result of acquisition, rehabilitation, or demolition, for a HUD-assisted activity.

(d) *Federalism.* The General Counsel, as the Designated Official under section 7(a) of the Executive Order 12612, *Federalism*, has determined that the policies contained in this funding notice will not have substantial direct effects on States or their political subdivisions or on the distribution of power and responsibilities among the various levels of government. Specifically, this notice makes funds available through specific entities for specific activities, as required by statute, and does not impinge upon the relationships between the Federal government, and State and local governments.

(e) *Prohibition against lobbying activities.* Applicants for funding under this notice are subject to the provisions of section 319 of the Department of Interior and Related Agencies Appropriation Act for Fiscal Year 1991, 31 U.S.C. 1352 (the Byrd Amendment) and to the provisions of the Lobbying Disclosure Act of 1995, Pub. L. 104–65 (December 19, 1995).

The Byrd Amendment, which is implemented in regulations at 24 CFR part 87, prohibits applicants for Federal contracts and grants from using appropriated funds to attempt to influence Federal Executive or legislative officers or employees in connection with obtaining such assistance, or with its extension, continuation, renewal, amendment or modification. The Byrd Amendment applies to the funds that are the subject of this notice. Therefore, applicants must file with their application a certification stating that they have not made and will not make any prohibited payments and, if any payments or agreement to make payments of nonappropriated funds for these purposes have been made, a form SF–LLL disclosing such payments must be submitted.

The Lobbying Disclosure Act of 1995, Pub. L. 104–65 (December 19, 1995), which repealed section 112 of the HUD Reform Act and resulted in the elimination of the regulations at 24 CFR

VOL 63 ISS 20 JA 30 1998 UMI

part 86, requires all persons and entities who lobby covered Executive or Legislative Branch officials to register with the Secretary of the Senate and the Clerk of the House of Representatives and file reports concerning their lobbying activities.

(f) *Fair Housing and Equal Opportunity.* Applications must contain a certification that the applicant will comply with the requirements of the Fair Housing Act, title VI of the Civil Rights Act of 1964, section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, and will affirmatively further fair housing.

Authority: Section 4 of the HUD Demonstration Act of 1993, Pub. L. 103–120, 42 U.S.C. 9816 note, as amended and Pub. L. 105–18, 111 Stat 198.

Dated: January 23, 1998.

Saul N. Ramirez, Jr.,

Assistant Secretary for Community Planning and Development.

LIST OF PUBLIC LAWS

The List of Public Laws for the 105th Congress, First Session, has been completed. It will resume when bills are enacted into Public Law during the second session of the 105th Congress, which convenes on January 27, 1998.

Note: A Cumulative List of Public Laws was published in the **Federal Register** on December 31, 1997.

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service for newly enacted public laws. To subscribe, send E-mail to **LISTPROC@ETC.FED.GOV** with the message:

SUBSCRIBE PUBLAWS-L FIRSTNAME LASTNAME

Note: This service is strictly for E-mail notification of new public laws only. The text of laws is not available through this service. We cannot respond to specific inquiries sent to this address.

Now Available Online

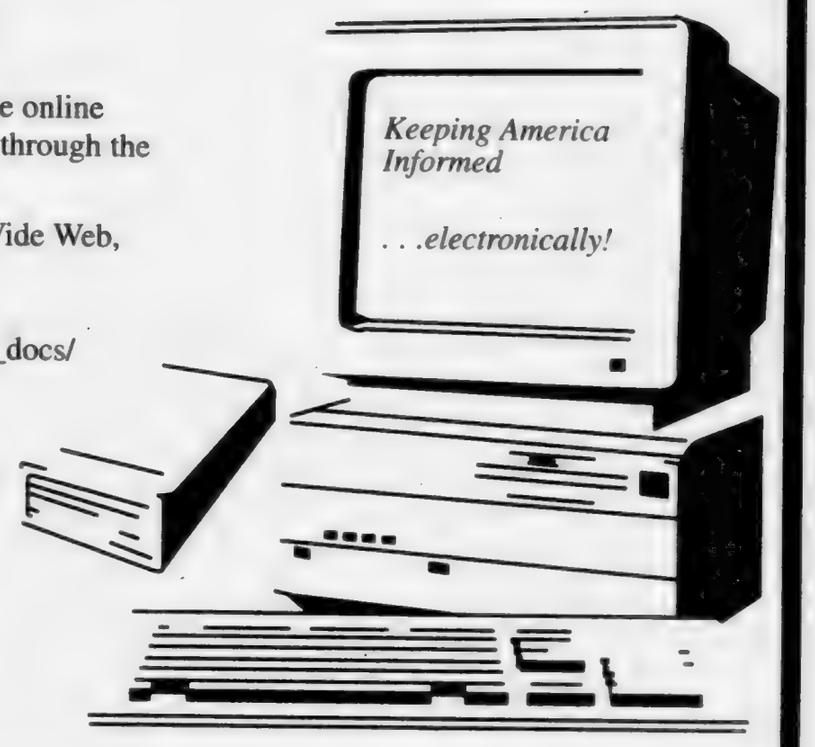
through

GPO Access

A Service of the U.S. Government Printing Office

Federal Register

Updated Daily by 6 a.m. ET



Easy, Convenient, FREE

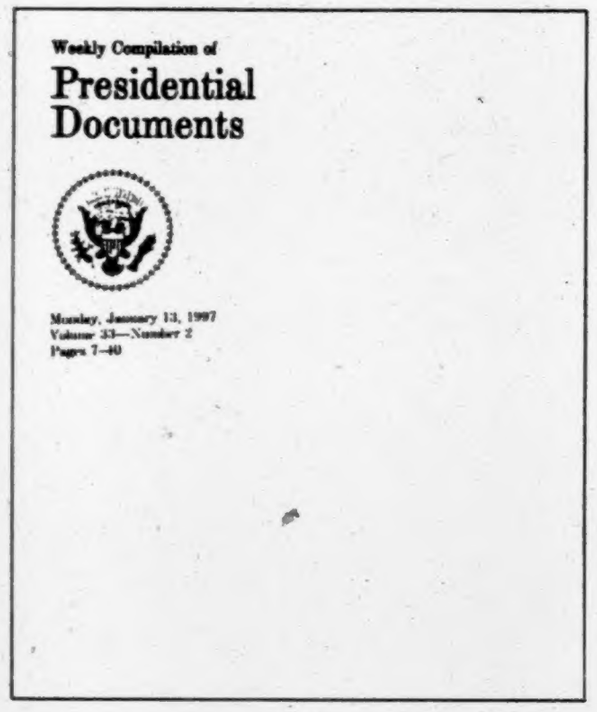
Free public connections to the online Federal Register are available through the GPO Access service.

To connect over the World Wide Web, go to the Superintendent of Documents' homepage at http://www.access.gpo.gov/su_docs/

To connect using telnet, open swais.access.gpo.gov and login as guest (no password required).

To dial directly, use communications software and modem to call (202) 512–1661; type swais, then login as guest (no password required).

You may also connect using local WAIS client software. For further information, contact the GPO Access User Support Team:



Voice: (202) 512–1530 (7 a.m. to 5 p.m. Eastern time).
Fax: (202) 512–1262 (24 hours a day, 7 days a week).
Internet E-Mail: gpoaccess@gpo.gov

The authentic text behind the news . . .

The Weekly Compilation of **Presidential Documents**

This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue includes a Table of Contents, lists of acts approved by the President, nominations submitted to the Senate, a checklist of White House press releases, and a digest of other Presidential activities and White House announcements. Indexes are published quarterly.

Published by the Office of the Federal Register, National Archives and Records Administration.

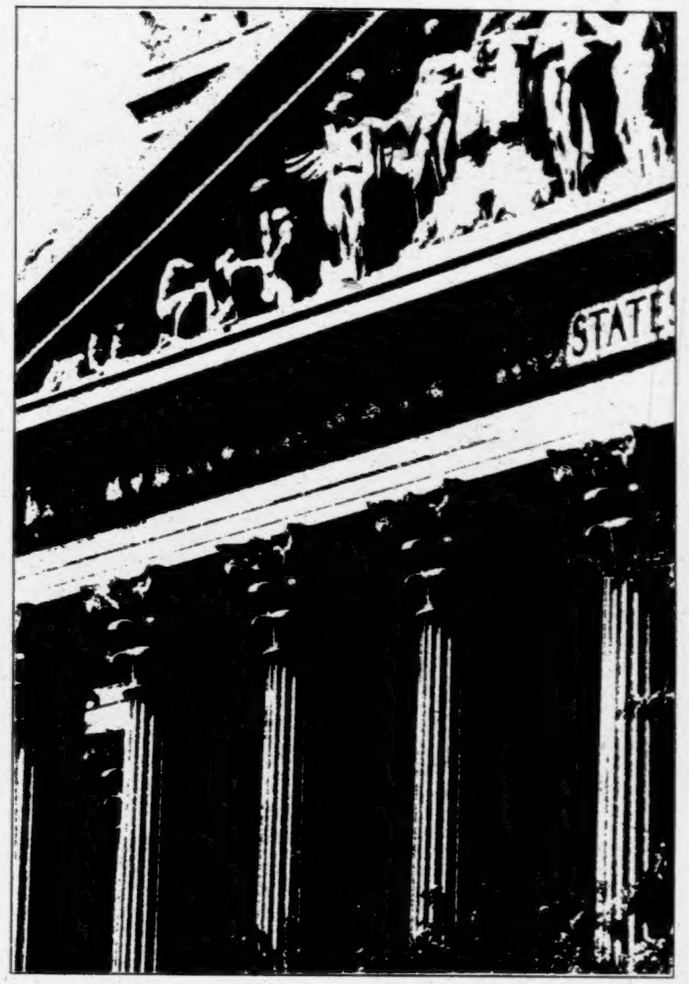
Would you like to know...

if any changes have been made to the Code of Federal Regulations or what documents have been published in the Federal Register without reading the Federal Register every day? If so, you may wish to subscribe to the *LSA (List of CFR Sections Affected)*, the *Federal Register Index*, or both.



LSA • List of CFR Sections Affected

The LSA (List of CFR Sections Affected) is designed to lead users of the Code of Federal Regulations to amendatory actions published in the Federal Register. The LSA is issued monthly in cumulative form. Entries indicate the nature of the changes—such as revised, removed, or corrected.
$27 per year.

Federal Register Index

The index, covering the contents of the daily Federal Register, is issued monthly in cumulative form. Entries are carried primarily under the names of the issuing agencies. Significant subjects are carried as cross-references.
$25 per year.

A finding aid is included in each publication which lists Federal Register page numbers with the date of publication in the Federal Register

INFORMATION ABOUT THE SUPERINTENDENT OF DOCUMENTS' SUBSCRIPTION SERVICE

Know when to expect your renewal notice and keep a good thing coming. To keep our subscription prices down, the Government Printing Office mails each subscriber *only one renewal notice*. You can learn when you will get your renewal notice by checking the number that follows month/year code on the top line of your label *as shown in this example:*

A renewal notice will be sent approximately 90 days **before the shown date.**

```
AFR  SMITH212J                DEC97 R 1
JOHN SMITH
212 MAIN STREET
FORESTVILLE MD 20747
```

A renewal notice will be sent approximately 90 days **before the shown date.**

```
AFRDO  SMITH212J              DEC97 R 1
JOHN SMITH
212 MAIN STREET
FORESTVILLE MD 20747
```

To be sure that your service continues without interruption, please return your renewal notice promptly. If your subscription service is discontinued, simply send your mailing label from any issue to the Superintendent of Documents, Washington, DC 20402–9372 with the proper remittance. Your service will be reinstated.

To change your address: Please SEND YOUR MAILING LABEL, along with your new address to the Superintendent of Documents, Attn: Chief, Mail List Branch, Mail Stop: SSOM, Washington, DC 20402–9373.

To inquire about your subscription service: Please SEND YOUR MAILING LABEL, along with your correspondence, to the Superintendent of Documents, Attn: Chief, Mail List Branch, Mail Stop: SSOM, Washington, DC 20402–9375.

To order a new subscription: Please use the order form provided below.

Public Laws

105th Congress, 2nd Session, 1998

Pamphlet prints of public laws, often referred to as slip laws, are the initial publication of Federal laws upon enactment and are printed as soon as possible after approval by the President. Legislative history references appear on each law. Subscription service includes all public laws, issued irregularly upon enactment, for the 105th Congress, 2nd Session, 1998.

Individual laws also may be purchased from the Superintendent of Documents, U.S. Government Printing Office. Prices vary. See Reader Aids Section of the Federal Register for announcements of newly enacted laws or access the online database at http://www.access.gpo.gov/nara/index.html
